1.0 Introduction

8G web smart switch is a high performance web-smart switch that provides up to 8 10/100/1000Mbps copper Ethernet ports, this device provides a great flexibility for nowadays variety of network application but at lower cost. User doesn't have to learn many sophisticated management function which are usually shown in SNMP switch but just to learn some simple or common control or setting function through either out-of-band RS232 port or Ethernet port, however, some new, advanced and important function such as Tag-VLAN, Trunking, RSTP and IGMP are also supported same as SNMP switch, this means, user doesn't have to pay high cost as tradition layer 2 SNMP switch does while he still can get advanced or common function to meet requirement of general network application. This makes it very suitable for small or medium size company to build up simple network at beginning phase with lower cost. Besides, a optional long-ear accessory also makes it possible to operate in the rack mount environment.

Non-blocking and maximum wire speed performance are designed on all switched ports, it not only supports auto-negotiation but also AUTO-MDIX function on all switched 8 10/100/1000M RJ-45 Gigabit copper ports no matter running with half or full duplex mode, these function make user easy to use and reduce the matching effort between straight and cross-over line issues.

8G web smart switch supports both port-based and 802.1Q (tag-based) VLAN to catch-up the application needed in incoming VLAN age. To increase bandwidth application, it supports up to 4 trunk groups with maximum 8 ports on one Trunk, moreover, these trunk ports are with fair-over function to provide redundant back-up when one or some of trunk ports malfunction. Moreover, to reduced convergent time of STP protocol, Rapid STP (RSTP) is supported, to support multicast application IGMP is also supported.

Fully LED status display ease user's installation, a reset button is also provided to make user easy to go back to default setting.

1.1 Main Features

This switch provides the following main features:

- Non-blocking, full-line speed, store-and-forward
- Support jumbo frame, Max. packet length 9600 bytes
- Auto-Negotiation and Auto-MDIX on all 10/100/1000M copper ports
- Up to 8 10/100/1000 RJ-45 copper ports
- 144K byte packet buffer, 8K MAC entries
- Support port-based VLAN and tag-based (802.1Q) VLAN
- Support RSTP, IGMP, DHCP

- Support "relocate port number" to " http operation "
- Port trunk with fail-over capability
- Support flow control for both full/half duplex operations
- Support Multicast storm, Broadcast Storm control as well as Flooding Control
- Support port mirroring
- LED display for each port to show link and activity status
- Desktop and optional Rack mountable kit
- Reset to default " push button " and field code upgradeable

1.2 Start to Manage This Switch

Either way user may start to manage this switch, web mode through Ethernet port or terminal mode through RS232 port.

1,2,1 Web mode default setting are:

Default IP Address: 192.168.223.100 Default IP mask: 255.255.255.0 Default gateway: 192.168.223.254 Default Password (blank), press "enter" key in the password field

1.2.2 Terminal mode default setting are: baud rate: 115,200, attribute: 8, None, 1, None Terminal mode operation: (no password is needed)

Once terminal is connected, the basic operation rule are shown below

Press "?" to find root operation page, then choose command by typing little alphabets

After enter command page, Press "?" to find command parameters and format, further more, type " command ?" to get explanation.

Type "up" or "/ "to go back to previous page

2.0 Web management

After login is successfully validated, the switch's home page will show up. The left part on the page provides the *function menus*, while the right part provides the individual configuration value or system parameters value. Function manus are divided into three categories, they are **Configuration, Monitoring and Maintenance,** all functions are shown briefly below

Configuration

- System system values, such as H/W, F/W version, IP, IP mask, MAC address...etc
- **Ports** port status and configure port parameters
- **Port-based VLAN** to setup the port-based VLAN
- **Tag-based VLAN** to configure the tag-based VLAN
- **Port Trunking** to build up the trunk function
- **Port Mirroring** to setup the port mirroring function
- **Quality of Service** to configure the Quality of Service function
- **Storm Control** to set all kinds of storm limit
- LACP to set LACP parameter
- **RSTP** to set RSTP parameter
- **IGMP** to set IGMP parameter
- **802.1X** to set 802.1X parameter

Monitoring:

- **Port Statistics** to statistic traffic on each ports
- **Detailed Port Statistics** to statistic more detailed traffic on each ports
- LACP status to show LACP status
- **RSTP status** to show RSTP status
- **IGMP status** to show IGMP status
- **Reset** to reboot the switch with/without writing default configurations
- **Ping** provide ping function and ping result

Maintenance

- Warm Reboot to restart system
- Factory Default to get parameter value back to factory default
- Firm Upgrade to upgrade code
- **Config File** to backup configuration data
- Logout to logout

2.1 Configurations

2.1.1.1 System information

The system diagram shows every common system information, they are H/W, F/W version, MAC address, IP address, subnet mask, IP gateway, default VLAN value of management port, name, password, timeout value, and SNMP communities...etc. Once user finish the setting, he must press the "Apply " button to execute all his setting, and whenever he needs, he may press the "Refresh " button to get updated status of system information.

Model Name	8G_PoE_Smart
MAC Address	00-0a-17-02-14-ec
F/W Version	2.0
H/W Version	1.0
DHCP Enabled	
IP Address	192.168.223.110
Subnet Mask	255.255.255.0
Gateway	0.0.0.0
HTTP Listening Port Number	80 (1024 - 65535)
Tag VLAN Management Group	1 –
Name	
Password	
Inactivity Timeout (secs)	0
SNMP enabled	
SNMP Trap destination	0.0.0.0
SNMP Read Community	Dublic
SNMP Write Community	private
SNMP Trap Community	Dublic

System Configuration

Apply Refresh

2.1.1.2 DHCP

The default DHCP is off, so Default IP or user defined IP is used when this machine is turning-ON, but if this switch needs an IP assigned from DHCP server, user may click the square field and then press "Apply " to get an IP which will be assigned by DCHP server ". User must be aware that if he enable DHCP from web page, and if the DHCP server is working, then after enable DHCP, he will lose contact of web page, because the IP address has been changed.

2.1.1.3 relocate HTTP port number

The default port number of **HTTP command** is 80, but unauthorized user may intrude this switch if he knows the IP of this switch, network manager may relocate this port number to other value, from 1024 to 65535, the same idea as above, once network manager change the value of HTTP's port number, he will lost contact and he must regain web page by command modified as below:

http://192.168.223.100:port_value

2.1.1.4 Tag VLAN management group (CPU port)

At first time you turn on this device, all ports belong to default VLAN ID group (VID=1), so they can communicate to each other, and hence any port can be used as web management port to talk with CPU port inside, but, for example, assume user uses port 1 as web management port, then user create VLAN ID=10 on port 7,8 and create another VLAN ID = 20 on port 5,6, now 3 VLAN groups will be shown on VALN group table after he press " Apply " button. Meanwhile, Tag VALN management Group on System page now will be shown 3 options to select, **user may assign CPU port to one of VLAN groups by press "Apply" command, so that he can continue configure or manage switch through any one port of selected VLAN group.** . If VLAN 10 and VLAN ID 20 must be isolated, then user must delete original member port 5,6,7,8 in default VLAN group (VID = 1). And if user forget what group that CPU belongs to, there are two ways to solve this condition below.

(1) Through console port, change VLAN ID of CPU port under IP Setup command if he gets password, or

(2) Press "**Reset**" button **few seconds**, let system return to default settings, that is, ---- >> IP address=192.168.223.100; ... VID=1, and all settings return to factory default

2.1.2 Ports

Port status page always shows current port status of all 8 ports. User can set link mode, enable or disable flow control and jumbo frame, however, be noticed that the jumbo frame is global setting, it can't be set on individual port but on all ports at a time. A default diagram is shown below,

Port	Link Status	L	ink Mod	e	Flow Co	ntrol
1	100FDX	Aut	n Snæd	T

Port Configuration

Choose and click the ports you want to set, for example, choose port 1, and set port 1 Flow Control enable, then press "Apply", after execution, diagram will shown below

Port Configuration

Port Link Status	Link Mode	Flow Control
------------------	-----------	--------------

1	100FDX	Auto Speed	V
2	Down	Auto Speed	
3	Down	Auto Speed	
4	Down	Auto Speed	
5	Down	Auto Speed	
6	Down	Auto Speed	
7	Down	Auto Speed	
8	Down	Auto Soeed 🔻	

2.1.3 Port-based VLAN

Port-based VLAN is a kind of VLAN which is a group of ports marked as a kind by group ID, different VLAN (different ID) can't communicate to each other. Before the setting, user must be aware of that there is a default Port-based VLAN, his group ID is 1, so, if user wants to set another new port-based VLAN, better set another group ID rather than 1. After press "Apply " button, the screen will show a new port-based VLAN if he add a new group or screen will delete a port-based VLAN if he delete a group. The important thing is that port-based VLAN is valid only within same device, it will never be valid cross the devices. A default diagram is shown below.

Port-based VLAN (User Group) Configuration

P	Port-based VLAN Group (User Group) Table										
No		Member Port									
NO.	Group ID	1	1 2 3 4 5 6 7 8								
1	1	•	•		•	•	•	•	•		

Choose and click the ports you want to group, for example, choose port 1, port 2 and set their group ID 2, then press "Apply", after execution, diagram will shown below

Port-based VLAN (User Group) Configuration

Po	Port-based VLAN Group (User Group) Table											
No	Group ID		Member Port									
NO.	Group ib	1	2	3	4	5	6	7	8

Group ID	1	2	3	4	5	6	7	8		
2 🔻	•	7								

Refre <u>s</u> h	Delete	Apply
------------------	--------	-------

12

2.1.4 Tag-based VLAN

Tag-based VLAN is another kind of VLAN which is a group of ports marked as same kind by assigning a tag-value on each port, same as port-based VLAN, different VLAN (different ID) can't communicate to each other, and before the setting, there is a default tag-based VLAN, which ID is 1 (VLAN ID=1), so, if he wants to set another new tag-based VLAN, better set another VLAN ID rather than 1 (tag-base VALN ID ranged from 1 ~ 4094). After press "Apply "button, the screen will show a new tag-based VLAN if user add a new VALN, or, a tag-VLAN will be vanished if user delete a VLAN. Two important things must be emphasized here, one is that tag-based VLAN members are valid not only within same device, but also cross the devices as long as they are with same VLAN ID; the other important thing is user must keep in mind that the management-port (CPU port)VLAN ID should be the same as some member VLAN ID if user want to management through that port, or, management communication will be failed because different VLAN (different ID) can't communicate to each other.

A default diagram is shown below.

Та	Tag-based (802.1q) VLAN Configuration										
Tag-based (802.1q) VLAN Group Table											
Coloct	Select No. VLAN ID										
Select	NO.	VLAN ID	1	2	3	4	5	6	7	8	
C	1	1	7	V	Y	V	V	V	Y	V	

Add/Edit a VLAN Group										
Member Port										
VLAN ID (1-4094)	1	2	3	4	5	6	7	8		
		-		Γ						
Port Config										
	Refresh	1	Delete		Apply	1				

After assign a tag VLAN, there are further attributes parameter can be assigned for some advanced tag-VLAN application, here below are explanation when entering the "Port Config ", they are:

1. VLAN Aware mode:

Enable - Strip VLAN tag from received frame, and insert VLAN tag in transmitted frame except ingress frames which tag VID = PVID

Disable - default state, this means, switch doesn't do VLAN tag stripping and insertion.

- 2. Ingress filtering:
 - Enable Check ingress frame VLAN ID. Ingress frame will be dropped if frame's VID is not the same as the VID of the ingress port which belongs to a member of a VLAN group
 - Disable Don't do ingress VLAN frame checking, the frame will be flood if VID is not the same
- 3. Accept Packet Type:

ALL - Accept all ingress frames

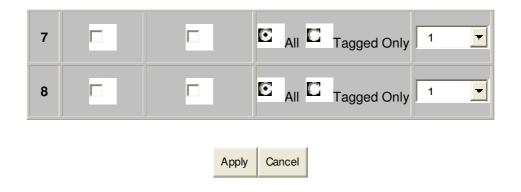

Tagged only - Only accept ingress frames with VLAN tag

4. Port VID:

Set port VLAN ID for untagged ingress frames. Set "None" for trunk port member.

Port	VLAN aware Enabled	Ingress Filtering Enabled	Acceptable Packet Type	Port VID
1			E All C Tagged Only	1 🔽
2			E All C Tagged Only	1 -
3			E All C Tagged Only	1 🔽
4			E All C Tagged Only	1 🔽
5			E All C Tagged Only	1
6		Γ	E All C Tagged Only	1 🔽

Tag VLAN Per Port Configuration

2.1.5 Port Trunking

A default diagram is shown below, and up to 4 groups are provided

Port Trunking (Aggregation) Configuration								
Group\Port	1	2	3	4	5	6	7	8
Normal	o	C	C	C	C	C	C	C
Group 1	C	C	C	C	C	C	C	C
Group 2	C	C	C	C	C	C	C	C
Group 3	C	C	C	C	C	C	C	C
Group 4	C	C	C	C	C	C	C	C
Apply Refresh								

Choose and click the trunk ports you want to group, for example, choose port 1, port 2 into group 1, then press "Apply", after execution, diagram will shown below

Port Trunking (Aggregation) Configuration

Group\Port	1	2	3	4	5	6	7	8
Normal		C	O	C	o	O	O	O

Group 2 C C C C C C C C C C			C	C	C	۵	Ø	C	Group 1
Group 3 C C C C C C C	C	C	C	C	C	C	C	C	Group 2

Multicast Rate	No Limit 🚽				
Flooded Unicast Rate	No Limit 🚽				
Apply	Refresh				

Choose and click type of storm you want to control, for example, choose Broadcast storm with 3,964 frames per second as upper limit, once the Broadcast frame rate higher than 3,964 frame per second, this port will be disabled. Press "Apply", after execution, diagram will be shown below

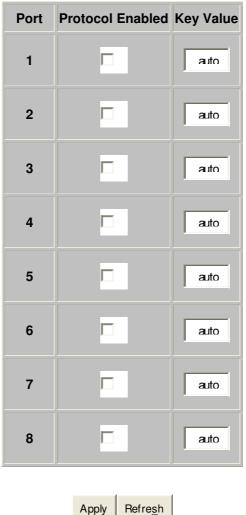

Storm Control Configuration

Storm Control					
Number of frames per second					
Broadcast Rate	3964 🔽				
Multicast Rate	No Limit 🚽				
Flooded Unicast Rate	No Limit 🚽				

Apply	Refre <u>s</u> h
-------	------------------

2.1.9 LACP

Different from the static port trunking, LACP provides another way to dynamically aggregate port to a group (trunk) according to IEEE 802.3ad. A default diagram is shown below,

LACP Port Configuration

Two parameters need to be set per port basis in this webpage:

- **Protocol Enabled** to enable/disable LACP protocol for a port.
- Key Value a number (1~255) to identify the LACP group for a port. All member ports in a LACP group have the same key values. Key number will be automatically generated if "auto" value is set

Choose and click the trunk ports you want to group. For example, select port 7 and port 8 to group into a LACP group with key value 20 for both ports, then press "Apply" to activate the setting. The following figure is the result:

LACP Port Configuration

Port	Protocol Enabled	Key Value
1		auto
2		auto
3		auto
4		auto
5		auto
6		auto
7		20
8		20

Apply Refresh

2.1.10 RSTP

The Spanning-Tree Protocol (STP) is IEEE 802.1d standardized method for avoiding loops in switched networks. Enable STP to ensure that only one path at a time is active between any two nodes on the network.

The Rapid-Spanning-Tree-Protocol (RSTP) is a more advanced protocol than STP according to IEEE 802.1w standard. RSTP can shorten spanning tree convergent time while network topology is changed. A default diagram is shown below,

RSTP Configuration					
System Configuration					
System Priority 32768 -					
Hello Time	2				
Max Age	20				
Forward Delay	15				
Force version	Normal				

	Port Configuration						
Port Protocol Enabled Edge Path Cos							
Aggregations							
1		•	auto				
2			auto				
3			auto				
4			auto				
5			auto				

6		•	auto
7		•	auto
8		•	auto
	Apply Refresh	1	

Use the following parameters in the webpage to configure RSTP function:

System Configuration

- System Priority A value to identify the root bridge. The bridge with lowest value has the highest priority and is selected as the root. 16 numbers are provided in this field from 0 to 61140 in increments of 4096.
- Hello Time -- the number of seconds among the transmission of Spanning-Tree Protocol configuration messages. Enter a number 1 through 10. (default is 2)
- Max Age the number of second bridge waits without receiving Spanning-Tree Protocol configuration messages before attempting a reconfiguration. Enter a number 6 through 40. (default is 20)
- Forward Delay -- the number of seconds a port waits before changing from its Spanning-Tree Protocol learning and listening states to the forwarding state. Enter a number 4 through 30. (default is 15)
- **Force Version** <u>normal</u>: use RSTP; <u>compatible</u>: compatible with old STP protocol

Port Configuration

- > Aggregations Enable/disable the RSTP protocol on aggregation links
- > **Protocol Enabled** Enable/disable the RSTP protocol per port basis
- Edge Enable/disable to expect a port to be an edge port (an end station) or a link to another STP device
- Path Cost A value on a port that switch uses to determine which port are the forwarding ports. The lowest number is forwarding ports. The value can be set from 1 to 200000000 or "auto" to be automatically generated.

2.1.11 IGMP

The Internet Group Management Protocol (IGMP) is an internal protocol of the Internet Protocol (IP) suite. IGMP can manage the multicast traffic if the members (switches, router or other network devices) of group support IGMP. This switch provides IGMP snooping feature to detect IGMP queries, report packets and manage the IP multicast traffic through the switch. This feature can limit the forwarding of multicast frames to only ports that are a member of multicast group. Only **IPv4** IGMP frames are recognized for this system.

IGMP Configuration

IGMP Enat	bled		V							
Router Por	ts		1 🗆	2 🗆	3 🗆	4 🗆	5 🗹	6 🗹	7 🗆	8 🗆
Unregister	ed IPMC Flo	oding enabled								
	VLAN ID	IGMP Snoopi	ng Enab	led	IGMP	Query	ing En	abled		
	1				E	~				
Apply Refresh										

The following parameters are provided for configuring IGMP snooping for this system:

- **IGMP Enabled** to globally enable/disable IGMP snooping function
- **Router Ports** to specify administrative router ports for IGMP frames
- Unregistered IPMC Flooding Enabled to set forwarding option for unregistered (not joined) IP multicast traffic. Enabled: to flood frames; Disable: to forward frames to router ports only

Two options can be set for each existing VLAN group:

- **IGMP Snooping Enabled** to enable/disable snooping IGMP frames
- **IGMP Querying Enabled** to enable/disable sending IGMP querying frames

The example webpage show in above shows the configuration of IGMP function which has IGMP enabled, uses port 5 and 6 as router ports to forward the IGMP frames, forwards unregistered IPMC frames to router ports (port 5 and 6), and enables snooping IGMP and sending querying frames for the VLAN group which VID = 1.

2.1.12 802.1x

A default diagram is shown below, user must contact the manager of RADIUS server, and then get IP, UDP port number and secret to operate 802.1X.

	-

1	no					
2	no					
3	no					
4	no					

5	no	
6	no	
7	no	
8	no	

2.2.4 RSTP Status

Choose and click command manual, after execution, diagram will shown like below, user can refresh as will

RSTP Status

	RS	STP VLAN	Bridge C	Overview		
VLAN Id	Bridge Id	Hello Time	Max Age	Fwd Delay	Topology	Root Id
1	32769:00-01-c1-00-00-02	2	20	15	Steady	This switch is Root!

Refre<u>s</u>h

	RSTP Port Status					
Port/Group	Vlan Id	Path Cost	Edge Port	P2p Port	Protocol	Port State
Port 1						Non-STP
Port 2						Non-STP
Port 3						Non-STP
Port 4						Non-STP
Port 5						Non-STP
Port 6						Non-STP
Port 7						Non-STP
Port 8						Non-STP

2.2.5 IGMP Status

Choose and click command manual, after execution, diagram will shown like below, user can refresh as will

IGMP Status

VLAN ID	Querier	Queries transmitted	Queries received	v1 Reports	v2 Reports	v3 Reports	v2 Leaves
1	Idle	0	0	0	0	0	0

Refre<u>s</u>h

2.2.5 Ping

A default diagram is shown below,

Ping Fi	unct	ion
Ping par	rame	ters
Target IP address		
Count	1	-
Time Out (in secs)	1	_

Apply

Ping Results					
Target IP address	0.0.0.0				
Status	Test complete				
Received replies	0				
Request timeouts	0				

Refre<u>s</u>h

Fill up the IP address you want to ping, set Time Out time and Counts, for example, IP = 192.168.223.254, count = 5, time pout = 5 sec, then press "Apply", then press "Refresh" after execution, diagram will shown below

Ping Results				
Target IP address	192.168.223.254			
Status	Test complete			
Received replies	0			
Request timeouts	5			
Average Response Time (in ms)	0

2.3 Maintenance

2.3.1 Warm Reboot

Choose and click command manual, diagram will shown like below, user can press Yes or No

Warm Reboot

Are you sure you want to perform a warm reboot?

Ye<u>s</u>No

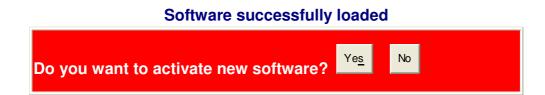

2.3.2 Factory Default

Choose and click command manual, diagram will shown like below, user can press Yes or No

2.3.3 Firmware Update

Choose and click command manual, diagram will be shown, and then direct the location of the file that to be updated, then press " upload ", if success, it will be shown below

2.3.4 Config File

Choose and click command manual, diagram will be shown, and then direct the location of the file that to be backup, give a name, then press "Backup "

Configuration File Backup/Restore

Configuration File Backup

Backup

Choose and click command manual, diagram will be shown, and then direct the location of the file that to be restored, then press "Restore " It will show transfer completed if it success.

Configuration File Restore

Restore

3.0 Terminal Mode management

Terminal mode is easy to operate, it is useful when in-band ethernet communication is malfunction, or user wants to do some parameter setting, for example, before in-band management through ethernet works, user might have to modify IP address, subnet mask, ...etc, he may do these things through terminal mode.

No password is needed in terminal mode operation, but before it starts, user must set up the terminal parameters, such as Hyper terminal in Microsoft Window,

Select COM #: COM 1, COM 2, ...then, Set Baud rate to: 115,200, per second Set Attribute to 8, None, 1, None (8 bit, No parity, 1 stop bit, No protocol in hardware)

Once terminal is connected, the basic operation rule are shown below

Press "? " to find root operation page, then choose command by typing little alphabets The screen will show as below

>?

Commands a	tt top level:
System	- System commands
Console	- Console commands
Port	- Port commands
MAC	- MAC commands
VLAN	- 802.1q (Tag-based) VLAN commands
Aggr	- Aggregation commands
LACP	- IEEE 802.3ad Link Aggregation commands
RSTP	- IEEE 802.1w Rapid Spanning Tree commands
User Group	- User Group (Port-based VLAN) commands
QoS	- QoS commands
Mirror	- Mirror commands
IP	- IP commands
Dot1x	- Dot1x commands
IGMP	- IGMP Snooping commands
Debug	- Debug commands

>

After enter command page, Press "? " to find command parameters and format, for example

>system System>

System>? Commands at System level: System Configuration [all] System Restore Default [keep IP] System Name [<name>] System Reboot System Reboot System Xmodem System SNMP [enableldisable] System Trap [<IP Address>] System Read community [<community string>] System Write community [<community string>]

further more, type " command " to get more information, such as type "configuration"

System>configuration System Configuration: Name: S/W Version: 1.1 CVS Tag: sw_8051_2_29e Compile Date: Dec 18 2006 12:26:43 H/W Version: 1.0

> MAC address: 00-0a-17-02-10-06 SNMP: enabled Trap IP: 0.0.0.0 Read community: public Write community: private Trap community: public

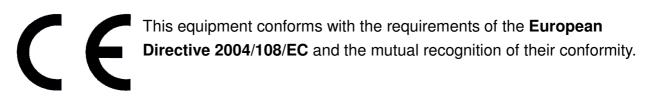

Type "up" or "/ "go back to previous page

All others command are operated likewise.

4.0 EC Declaration

Germering, 01.09.2007

Declaration of conformity for ALL8895 POE Switch

The safety advice in the documentation accompanying the products shall be obeyed. The conformity to the above directive is indicated by the CE sign on the device.

The ALLNET ALL8895 POE switch conforms to the **European Directive 2004/108/EC**. This equipment meets the following conformance standards:

EMI: EN 55022 : 2006 Class A

EMS: EN 55024 :1998 + A1:2001 + A2:2003

Safety: EN60950-1:2001 + A11:2004

This equipment is intended to be operated in all countries.

This declaration is made by

ALLNET Computersysteme GmbH Maistr. 2, 82110 Germering
