Chapter 1 Introduction

1.1 General Description

This switch is 24-port 10/100/1000M PoE+ with 4 Combo RJ45/SFP Rack-mount Web Smart PoE Switch, the switch supports IEEE 802.3at PoE+ standard, maximum 390W power consumption per system. The switch also provides exceptionally smart Web management features, such as VLAN, QoS, RSTP, IGMP Snooping, LACP, IEEE802.1X, Strom Control, PoE Schedule…etc. The switch is standard 19" rack-mount design to fit into the rack environment. With these features, the switch is a superb choice for medium or large network environment to strengthen its network connection and efficiency.

1.2 The Front Panel

The following figure shows the front panel of the switch.

1.3 LEDs Definition

This device provides extensive LEDs to show the activities on power, system and ports.
See the following description for your reference:

LED	Status	Operation
SYS	Steady Green	Power on.
	Blinking Green	System booting up.
	Off	Power off or fail.
PoE/Max	Steady Green	Over PoE max power budget (390W)
	Off	No over PoE max power budget (390W)
LINK/ACT	Steady Green	1000Mbps connected.
	Steady Amber	10/100Mbps connected
	Blinking	Sending or receiving data.
	Off	Port disconnected or link fail.
PoE	Steady Green	PoE power output on.
	Off	PoE power output off.
	Blinking Green	PoE power output over >30W (No Powering)

The Reset Button

Reset the switch to its factory default configuration via the RESET button. Press the Reset button for ten seconds and release. The switch automatically reboots and reloads its factory configuration file. The Reset button is on the front panel of the switch.

1.4 The Rear Panel

The following figure shows the rear panel of the switch:

Power Receptacle

To be compatible with the electric service standards around the world, the switch is designed to afford the power supply in the range from 100 to 240 VAC, 50/60 Hz. Please make sure that your outlet standard to be within this range.
To power on the switch, please plug the female end of the power cord firmly into the receptacle of the switch, the other end into an electric service outlet. After the switch powered on, please check if the power LED is lit for a normal power status.

1.5 Hardware Installation

To install this switch, please place it on a large flat surface with a power socket close by. This surface should be clean, smooth, and level. Also, please make sure that there is enough space around this switch for RJ45 cable, power cord and ventilation.
If you're installing this switch on a 19-inch rack, please make sure to use the rack-mount kit (L brackets) and screws come with the product package. ALL screws must be fastened so the rack-mount kit and your product are tightly conjoined before installing it on your 19-inch rack.

Ethernet cable Request

The wiring cable types are as below:

- 10 Base-T: 2-pair UTP/STP Cat. 3, 4, 5 cable, EIA/TIA-568 100-ohm (Max. 100m)
- 100 Base-TX: 2-pair UTP/STP Cat. 5 cable, EIA/TIA-568 100-ohm (Max. 100m)
- 1000 Base-T: 4-pair UTP/STP Cat. 5 cable, EIA/TIA-568 100-ohm (Max. 100m)
- PoE: To deliver power without problems, the Cat 5e and Cat 6 cable is suggested. The high quality Ethernet cable reduces the lost while power transmission.

SFP Installation

While install the SFP transceiver, make sure the SFP type of the 2 ends is the same and the transmission distance, wavelength, fiber cable can meet your request. It is suggested to purchase the SFP transceiver with the switch provider to avoid any incompatible issue.
The way to connect the SFP transceiver is to Plug in SFP fiber transceiver fist. The SFP transceiver has 2 plug for fiber cable, one is TX (transmit), the other is RX (receive). Cross-connect the transmit channel at each end to the receive channel at the opposite end.

Rack-mount Installation

Attach the brackets to the device by using the screws provided in the Rack Mount kit. Mount the device in the 19-inch rack by using four rack-mounting screws provided by the rack manufacturer.

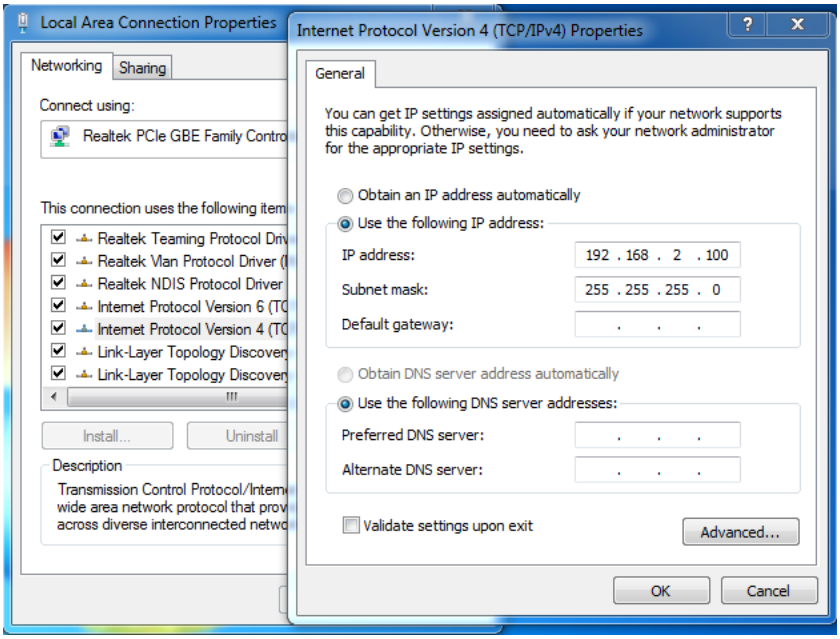
Chapter 2 Getting Started

2.1 Preparation for Web Interface

The web management page allows you to use a standard web-browser such as Microsoft Internet Explorer, Google Chrome or Mozilla Firefox, to configure and interrogate the switch from anywhere on the network.

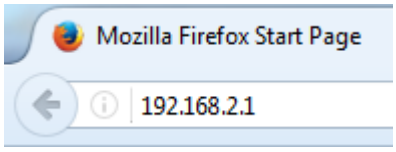
Before you attempt to use the web user interface to manage switch operation, verify that your switch is properly installed on your network and that every PC on this network can access the switch via the web browser.

1. Verify that your network interface card (NIC) is operational, and that your operating system supports TCP/IP protocol.
2. Wire the switch power and connect your computer to the switch.
3. The switch default IP address is **192.168.2.1**. The Switch and the connected PC should locate within the same IP Subnet.
4. Change your computer's IP address to 192.168.2.XX or other IP address which is located in the 192.168.2.x (For example: IP Address: 192.168.2.100; Subnet Mask: 255.255.255.0) subnet.

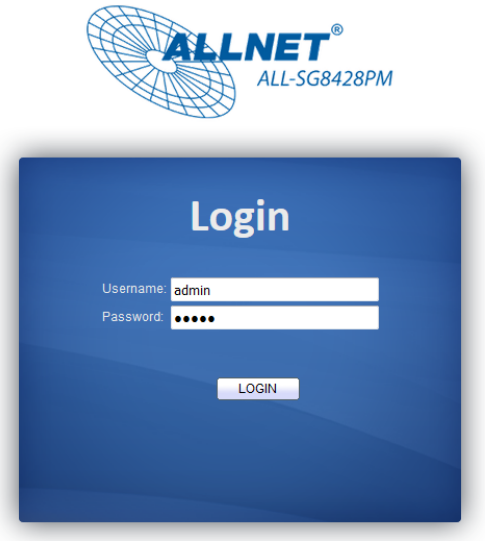


2.2 System login

1. Start your web browser.
2. Type “http://”and the IP address of the switch (for example, the default management IP address is **192.168.2.1**) in the Location or Address field. Press **[ENTER]**.

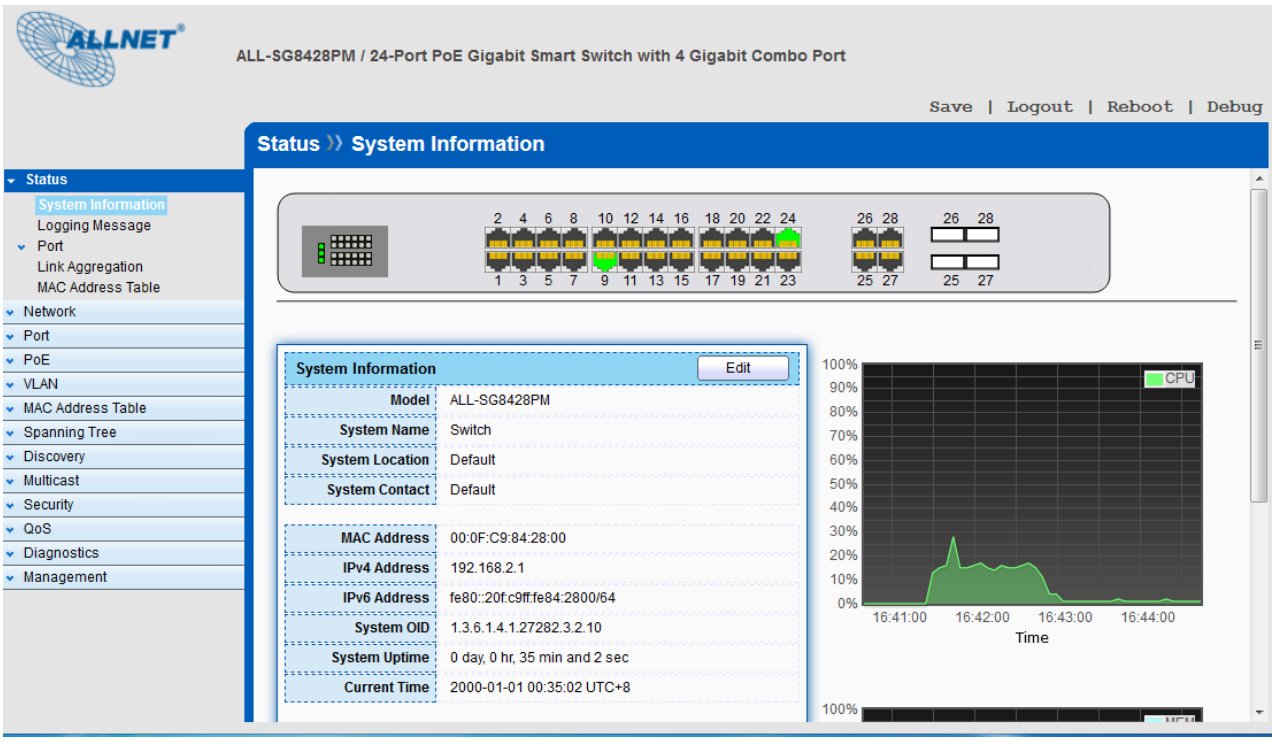


3. The login screen appears. The default username and password are "**admin**", so you can click **Login** and go to the web configuration screen directly.



2.3 The Graphic User Interface

After the password authorization, the System page shows up. You may click on each folder on the left column of each page to get access to each configuration page. The Graphic User Interface is as follows:



In the navigation panel, click a main link to reveal a list of submenu links shown as the following:

The following table describes the links in the navigation panel.

LINKS	Submenu
Status	System Information. Logging Message Port – Statistics, Bandwidth Utilization Link Aggregation MAC Address Table
Network	IP Address System Time
Port	Port Setting Link Aggregation – Group, Port Setting, LACP EEE Jumbo Frame
PoE	Global Setting Priority Setting Power Limit Power ON/OFF
VLAN	VLAN - Create VLAN, VLAN Configuration, Membership, Port Setting Voice VLAN - Property, Voice OUI
MAC Address Table	Dynamic Address Static Address
Spanning Tree	Property Port Setting Statistics
Discovery (LLDP)	Property Port Setting Packet View Local Information Neighbor Statistics
Multicast	General – Property, Group Address, Router Port IGMP Snooping – Property, Querier, Statistics
Security	RADIUS TACACS+ AAA – Method List, Login Authentication Management Access – Management VLAN, Management Service Authentication Manager – Property, Port Setting, Sessions Protected Port Storm Control DoS – Property, Port Setting
QoS	General – Property, Queue Scheduling, CoS Mapping, DSCP Mapping, IP Precedence Mapping Rate Limit – Ingress/Egress Port, Egress Queue
Diagnostics	Logging – Property, Remove Server Mirroring Ping Copper Test
Management	User Account Firmware – Upgrade/Backup, Active Image Configuration – Upgrade/Backup, Save Configuration

	SNMP – Community, Trap Event

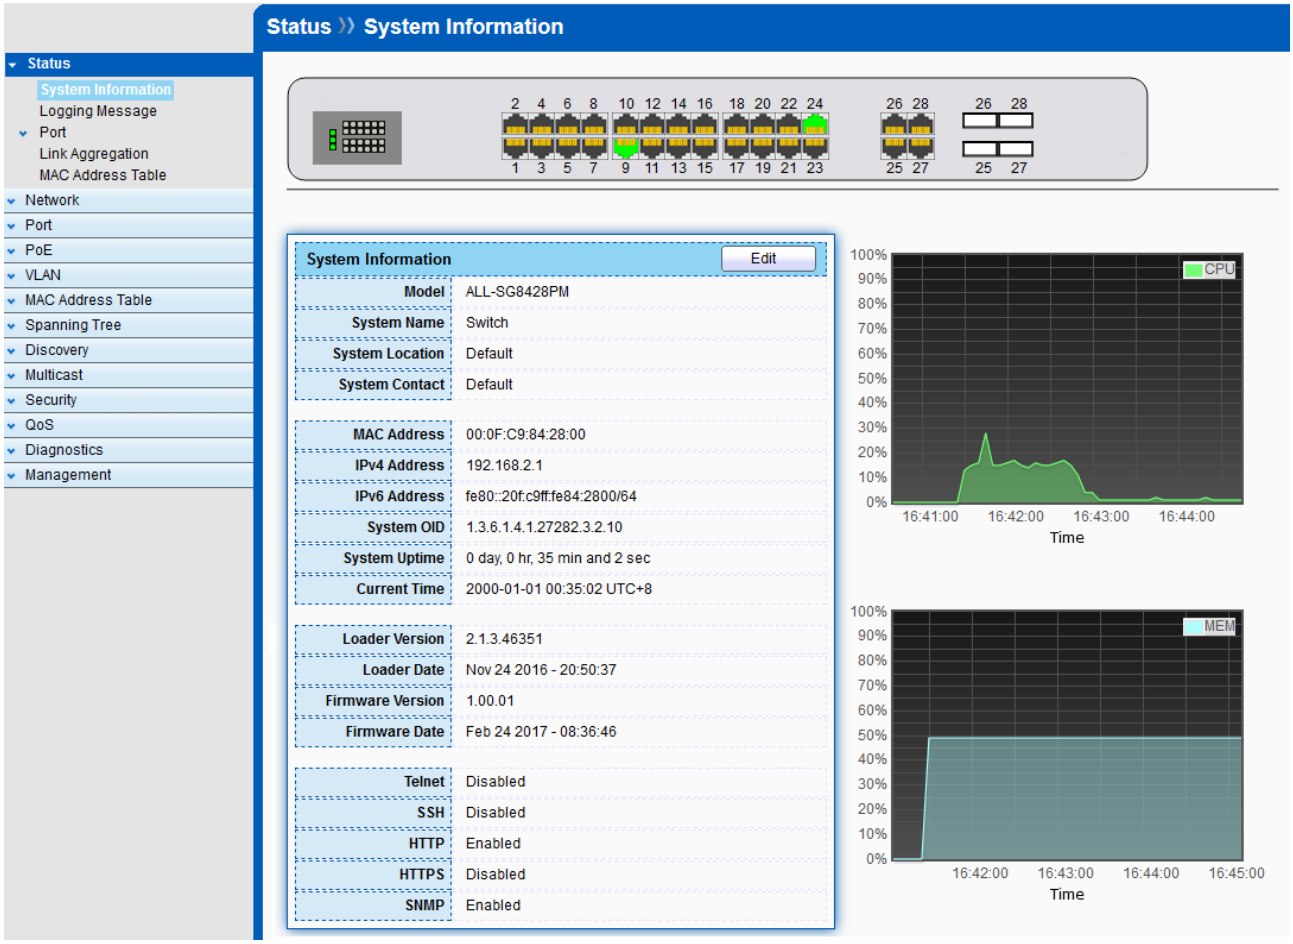
Chapter 3 Status

Use the Status pages to view system information and status.

3.1 System Information

Click **Status** > **System Information**

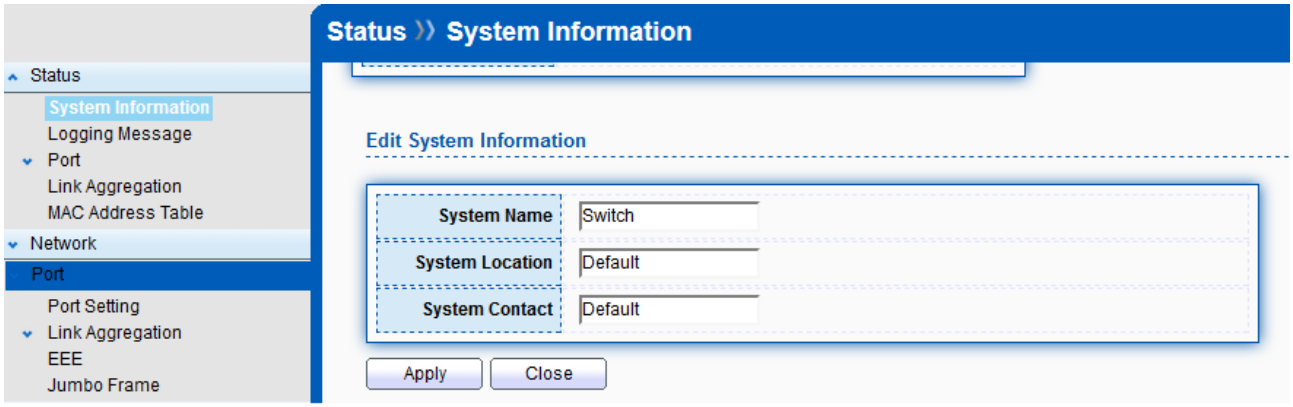
This page shows switch panel, CPU utilization, Memory utilization and other system current information. It also allows user to edit some system information.



Field	Description
Model	Model name of the switch
System Name	System name of the switch. This name will also use as CLI prefix of each line
System Location	Location information of the switch
System Contact	Contact information of the switch
MAC Address	Base MAC address of the switch
IPv4 Address	Current system IPv4 address
IPv6 Address	Current system IPv6 address
System OID	SNMP system object ID
System Uptime	Total elapsed time from booting
Current Time	Current system time
Loader Version	Boot loader image version
Loader Date	Boot loader image build date

Firmware Version	Current running firmware image version
Firmware Date	Current running firmware image build date
Telnet	Current Telnet service enable/disable state
SSH	Current SSH service enable/disable state
HTTP	Current HTTP service enable/disable state
HTTPS	Current HTTPS service enable/disable state
SNMP	Current SNMP service enable/disable state

Click "**Edit**" button on the table title to edit following system information.

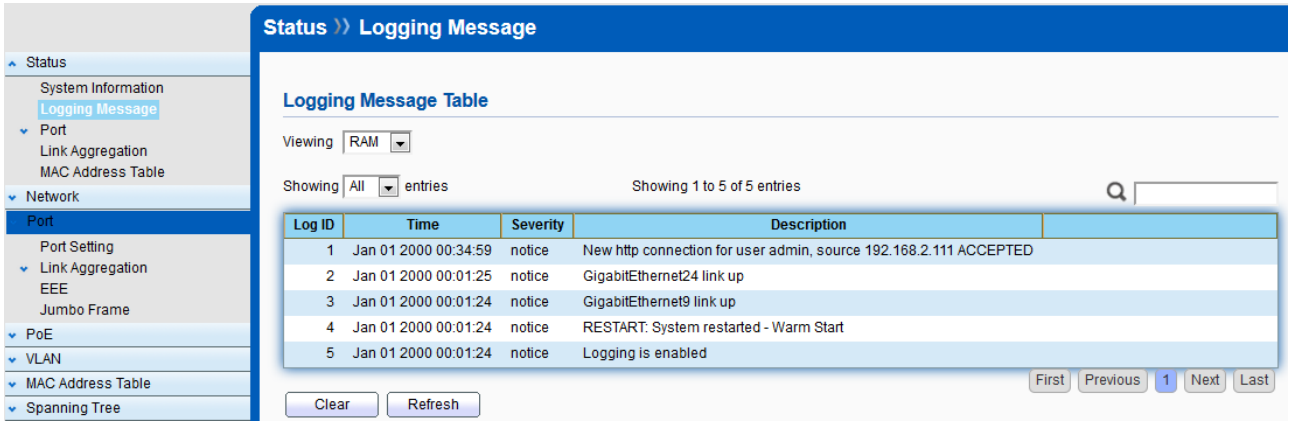


Field	Description
System Name	System name of the switch. This name will also use as CLI prefix of each line.
System Location	Location information of the switch.
System Contact	Contact information of the switch.

3.2 Logging Message

Click **Status** > **Logging Message**

This page shows logging messages stored on the RAM and Flash.



Field	Description
Viewing	The logging view including: **RAM**: Show the logging messages stored on the RAM **Flash**: Show the logging messages stored on the Flash.

Clear	Clear the logging messages.
Refresh	Refresh the logging messages.
Log ID	The log identifier.
Time	The time stamp for the logging message.
Severity	The severity for the logging message.
Description	The description of logging message.

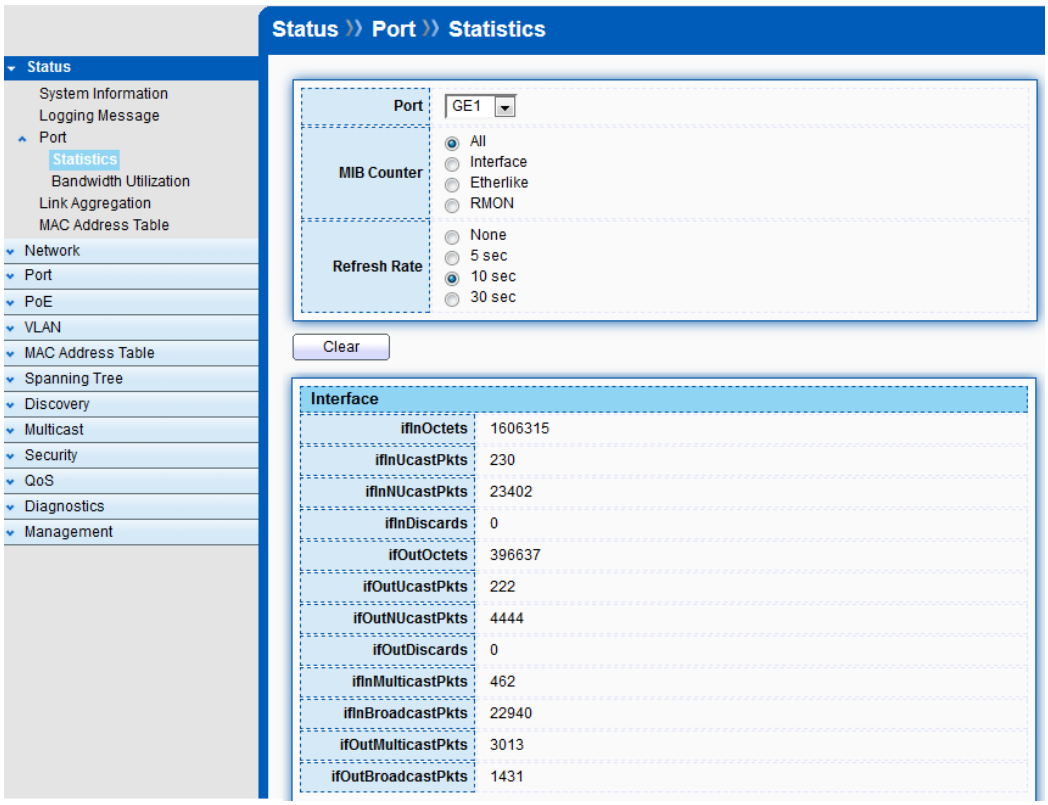
3.3 Port

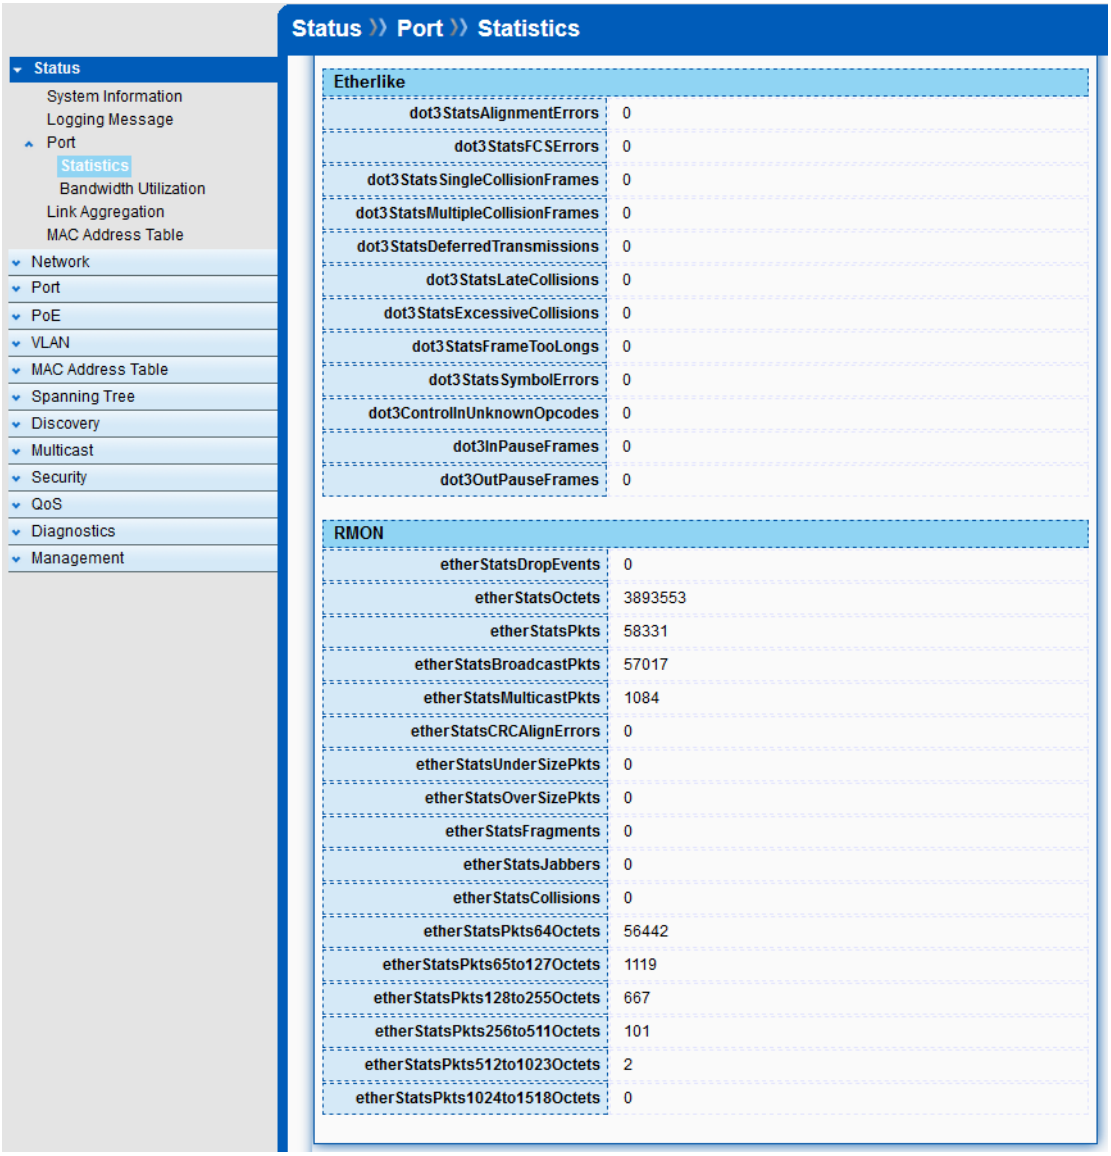
The port configuration page displays port summary and status information.

3.3.1 Statistics

Click **Status** > **Port** > **Statistics**

On this page user can get standard counters on network traffic from the interfaces, Ethernet-like and RMON MIB. Interfaces and Ethernet-like counters display errors on the traffic passing through each port. RMON counters provide a total count of different frame types and sizes passing through each port.





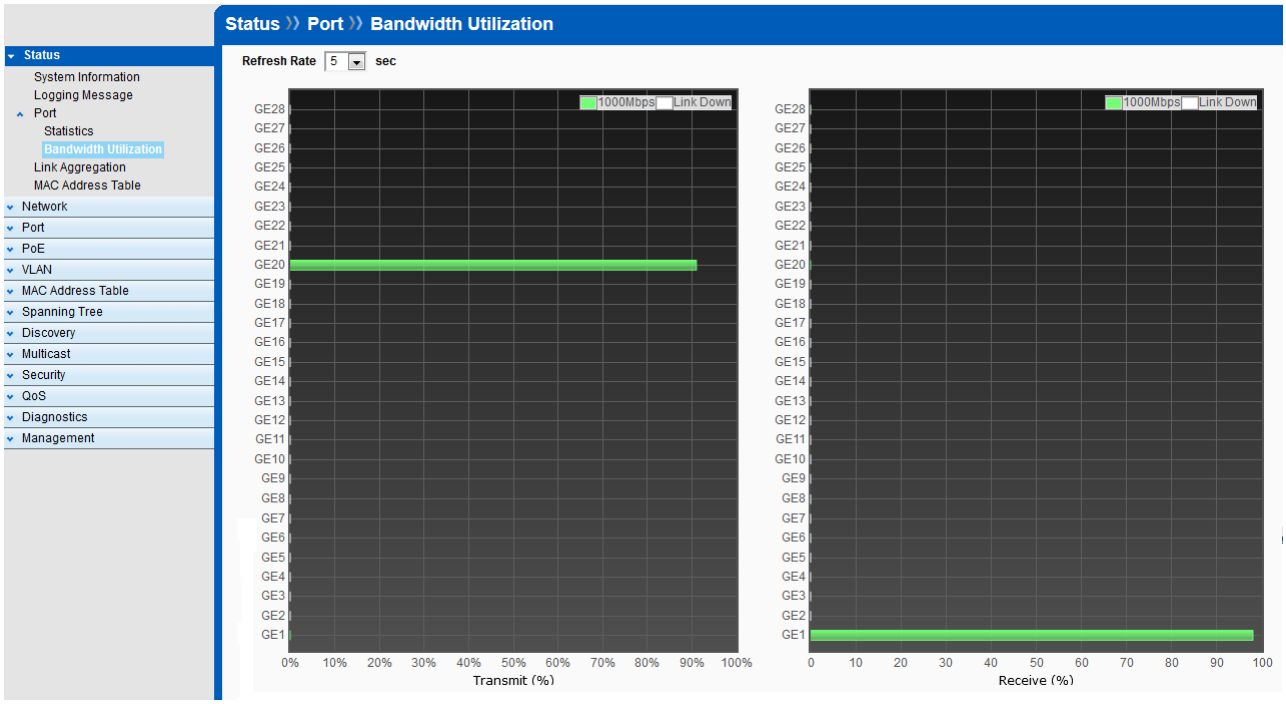
The "**Clear**" button will clear MIB counter of current selected port.

Field	Description
Port	Select one port to show counter statistics.
MIB Counter	Select the MIB counter to show different count type **All**: All counters. **Interface**: Interface related MIB counters **Etherlike**: Ethernet-like related MIB counters **RMON** : RMON related MIB counters
Refresh Rate	Refresh the web page every period of seconds to get new counter of specified port.

3.3.2 Bandwidth Utilization

Click **Status** > **Port** > **Bandwidth Utilization**

This page allow user to browse ports' bandwidth utilization in real time. This page will refresh automatically in every refresh period.

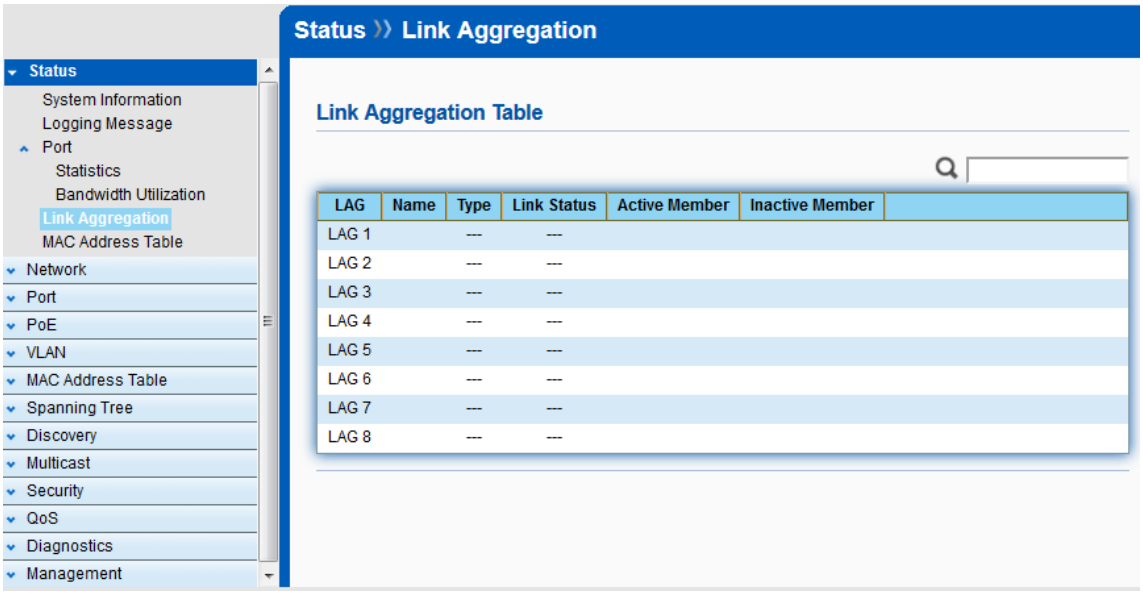


Field	Description
Refresh Rate	Refresh the web page every period of second to get new bandwidth utilization data.

3.4 Link Aggregation

Click **Status** > **Link Aggregation**

Display the Link Aggregation status of web page.



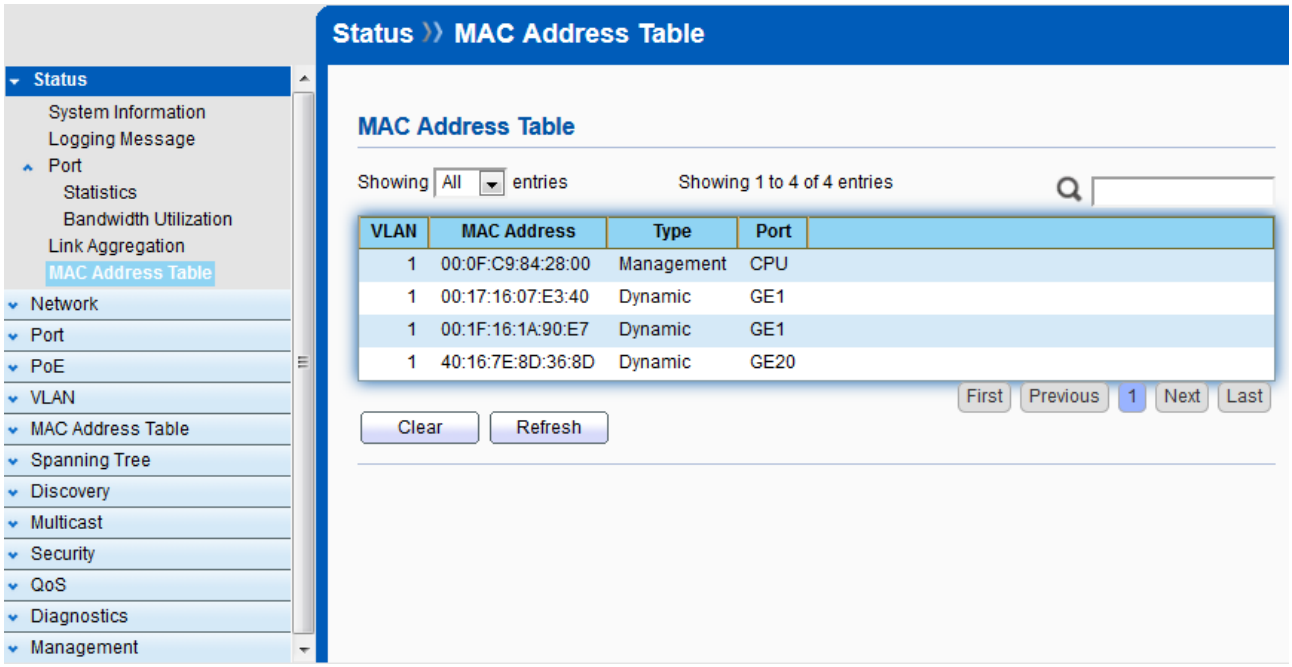
Field	Description
LAG	LAG Name.
Name	LAG port description
Type	The type of the LAG

	Static: The group of ports assigned to a static LAG are always active members. **LACP**: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Link Status	LAG port link status
Active Member	Active member ports of the LAG
Inactive Member	Inactive member ports of the LAG

3.5 MAC Address Table

Click **Status** > **MAC Address Table**

The MAC address table page displays all MAC address entries on the switch including static MAC address created by administrator or auto learned from hardware.



The "**Clear**" button will clear all dynamic entries and "Refresh" button will retrieve latest MAC address entries and show them on page.

Field	Description
VLAN	VLAN ID of the MAC address.
MAC Address	MAC address
Type	The type of MAC address **Management**: DUT's base MAC address for management purpose. **Static**: Manually configured by administrator. **Dynamic**: Auto learned by hardware.
Port	The type of port **CPU** : DUT's CPU port for management purpose **Other** : Normal switch port

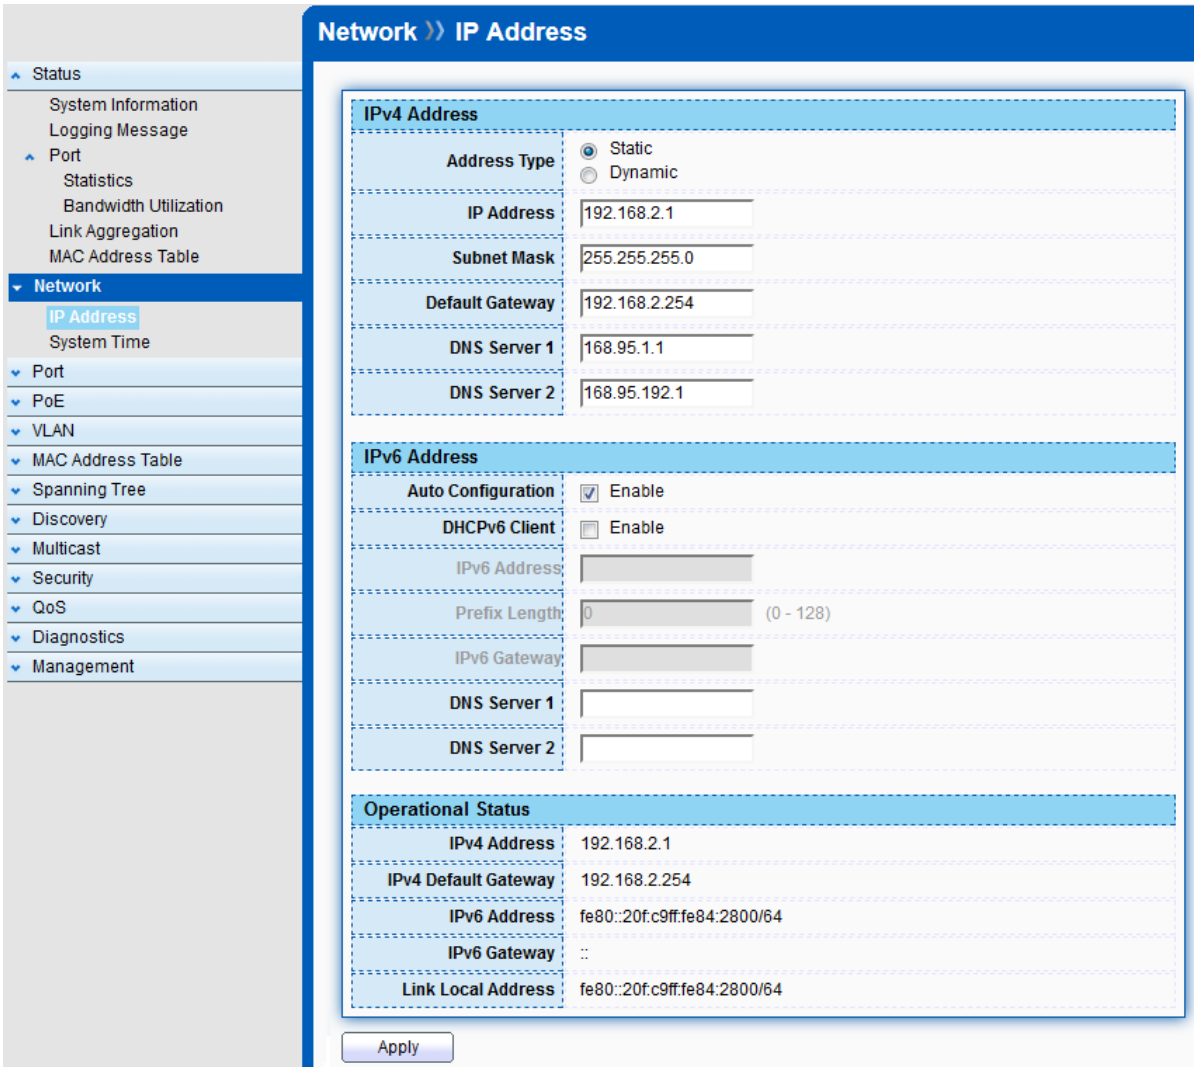
Chapter 4 Network

Use the Network pages to configure settings for the switch network interface and how the switch connects to a remote server to get services.

4.1 IP Address

Click **Network** > **IP Address**

Use the IP Setting screen to configure the switch IP address and the default gateway device. The gateway field specifies the IP address of the gateway (next hop) for outgoing traffic.
The switch needs an IP address for it to be managed over the network. The factory default IP address is 192.168.2.1. The subnet mask specifies the network number portion of an IP address.
The factory default subnet mask is 255.255.255.0.



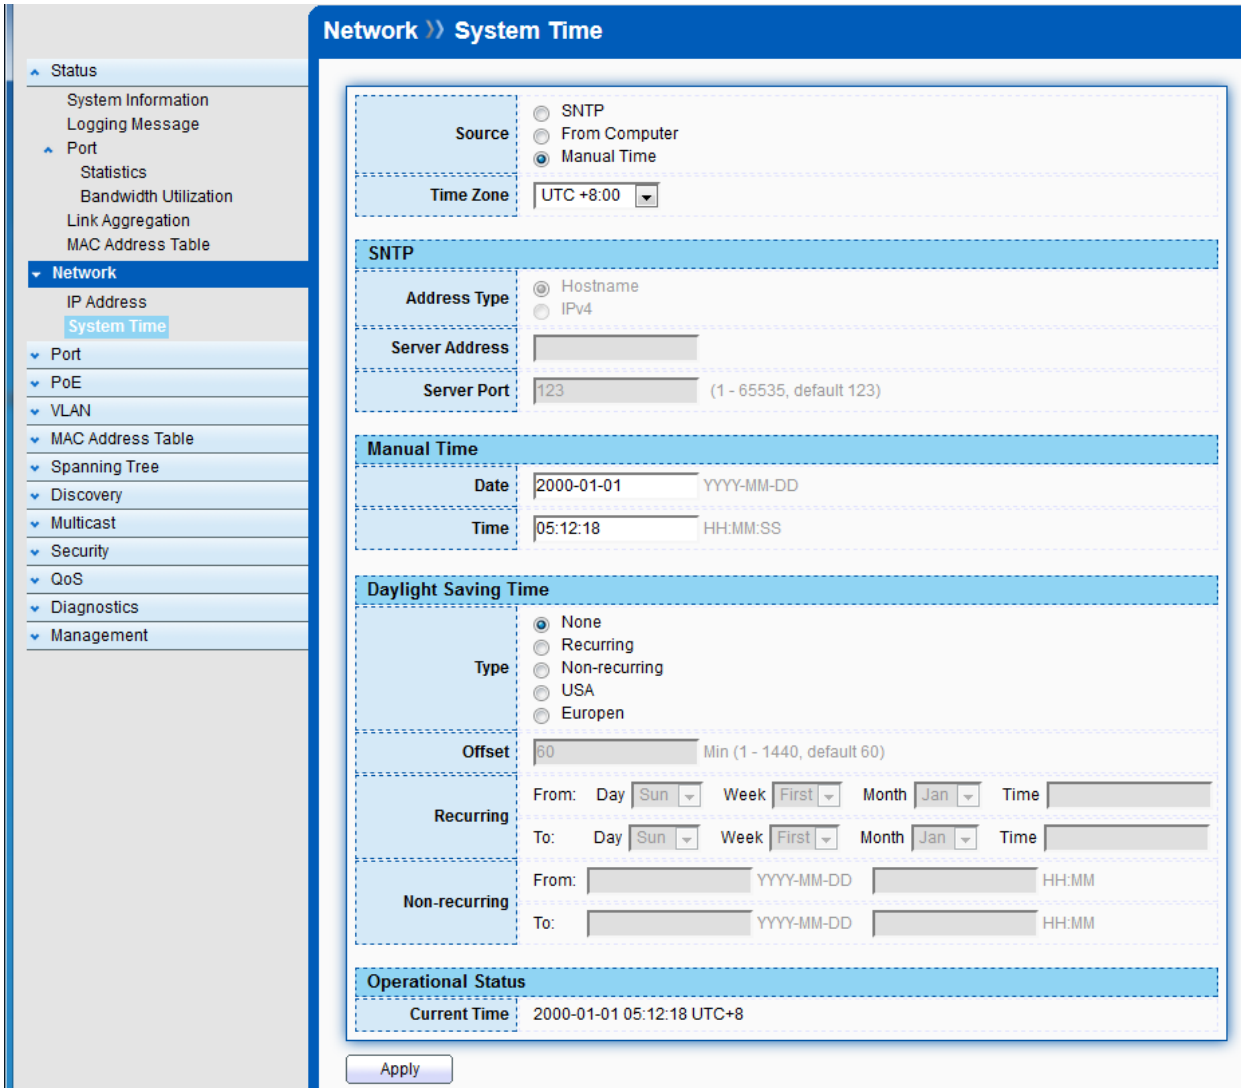
Field	Description
IPv4 Address Field	

Address Type	Select the address type of IP configuration ·**Static**: Static IP configured by users will be used. ·**Dynamic**: Enable DHCP to obtain IP information from a DHCP server on the network.
IP Address	Enter the IP address of your switch in dotted decimal notation for example 192.168.2.1. If static mode is enabled, enter IP address in this field.
Subnet Mask	Enter the IP subnet mask of your switch in dotted decimal notation for example 255.255.255.0. If static mode is enabled, enter subnet mask in this field.
Default Gateway	Specify the default gateway on the static configuration. The default gateway must be in the same subnet with switch IP address configuration
DNS Server 1	If static mode is enabled, enter primary DNS server address in this field.
DNS Server 2	If static mode is enabled, enter secondary DNS server address in this field.
IPv6 Address Field	
Auto Configuration	Select **Enable** or **Disable** the IPv6 auto configuration.
DHCPv6 Client	DHCPv6 client state. ·**Enable**: Enable DHCPv6 client function. ·**Disable**: Disable DHCPv6 client function
IPv6 Address	Specify the IPv6 address, when the IPv6 auto configuration and DHCPv6 client are disabled.
IPv6 Prefix	Specify the prefix for the IPv6 address, when the IPv6 auto configuration and DHCPv6 client are disabled.
Gateway	Specify the IPv6 default gateway, when the IPv6 auto configuration and DHCPv6 client are disabled.
DNS Server 1	Specify the primary user-defined IPv6 DNS server configuration.
DNS Server 2	Specify the secondary user-defined IPv6 DNS server configuration.
Operational Status	
IPv4 Address	The operational IPv4 address of the switch.
IPv4 Gateway	The operational IPv4 gateway of the switch.
IPv6 Address	The operational IPv6 address of the switch.
IPv6 Gateway	The operational IPv6 gateway of the switch.
Link Local Address	The operational IPv6 link local address for the switch.

4.2 System Time

Click **Network** > **System Time**

This page allow user to set time source, static time, time zone and daylight saving settings. Time zone and daylight saving takes effect both static time or time from SNTP server.



Field	Description
Source	Select the time source ·**SNTP**: Time sync from NTP server. ·**From Computer**: Time set from browser host. ·**Manual Time**: Time set by manually configure.
Time Zone	Select a time zone difference from listing district.
SNTP	
Address Type	Select the address type of NTP server. This is enabled when time source is SNTP.
Server Address	Input IPv4 address or hostname for NTP server. This is enabled when time source is SNTP.
Server Port	Input NTP port for NTP server. Default is 123. This is enabled when time source is SNTP.
Manual Time	
Date	Input manual date. This is enabled when time source is manual.
Time	Input manual time. This is enabled when time source is manual.
Daylight Saving Time	
Type	Select the mode of daylight saving time. **None**: Disable daylight saving time. **Recurring**: Using recurring mode of daylight saving time. **Non-Recurring**: Using non-recurring mode of daylight saving

	time. **USA** : Using daylight saving time in the United States that starts on the second Sunday of March and ends on the first Sunday of November **European**: Using daylight saving time in the Europe that starts on the last Sunday in March and ending on the last Sunday in October.
Offset	Specify the adjust offset of daylight saving time.
Recurring From	Specify the starting time of recurring daylight saving time. This field available when selecting “Recurring” mode.
Recurring To	Specify the ending time of recurring daylight saving time. This field available when selecting “Recurring” mode.
Non-recurring From	Specify the starting time of non-recurring daylight saving time. This field available when selecting “Non-Recurring” mode.
Non-recurring To	Specify the ending time of non-recurring daylight saving time. This field available when selecting “Non-Recurring” mode.

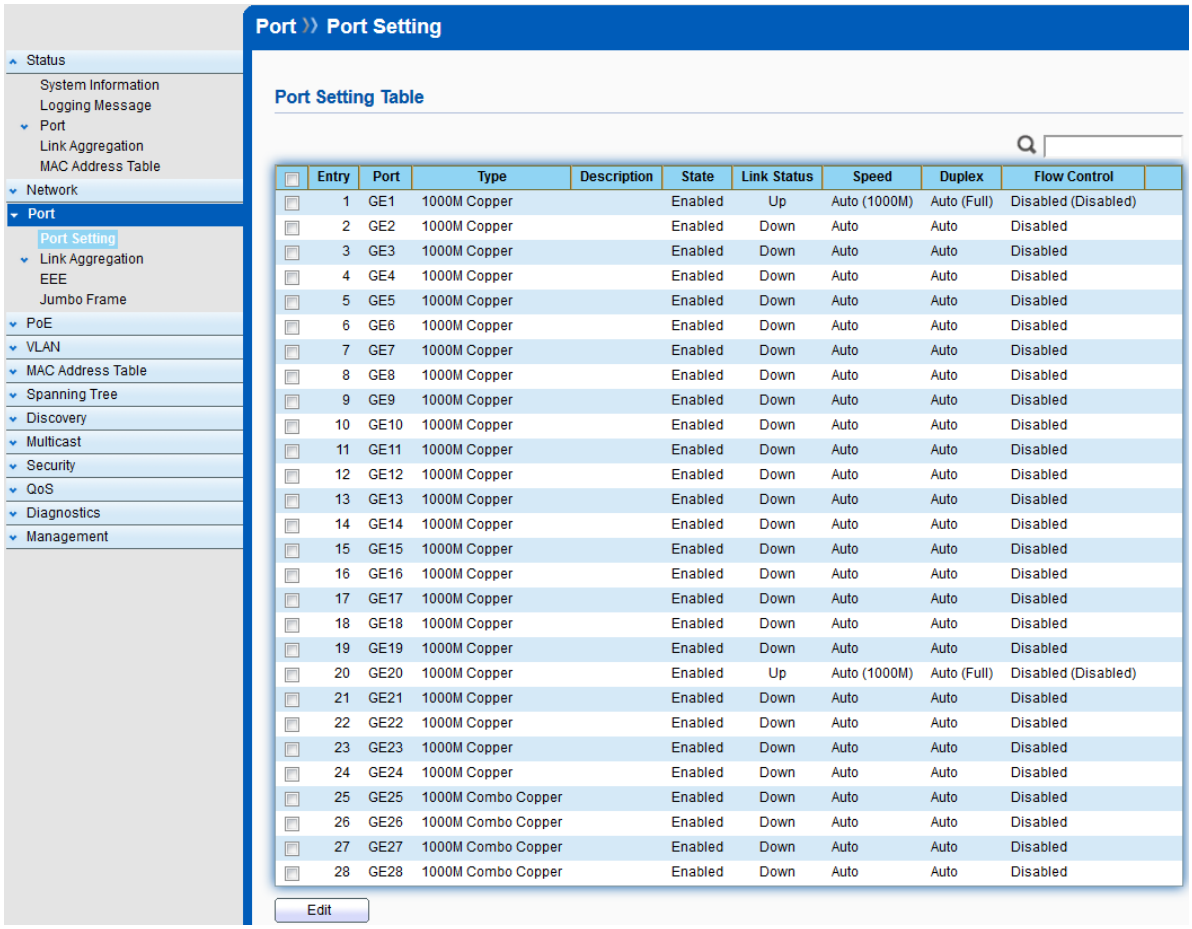
Chapter 5 Port

Use the Port pages to configure settings for the switch port related features.

5.1 Port Setting

Click **Port** > **Port Setting**

This page shows port current status, and allow user to edit port configurations. Select port entry and click "**Edit**" button to edit port configurations.



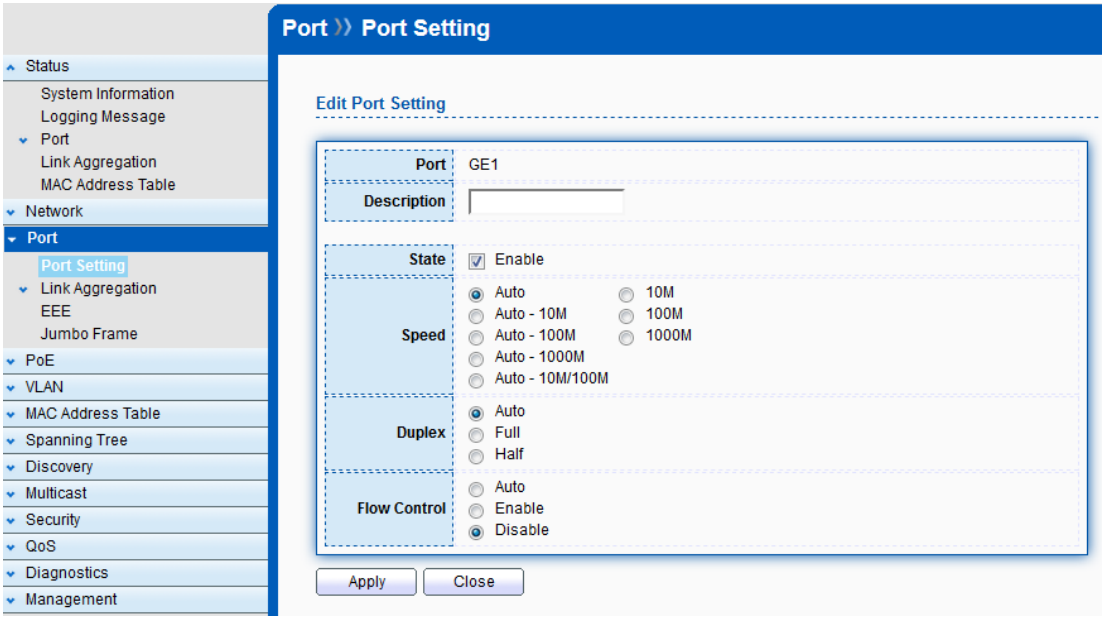
Field	Description
Port	Port Name.
Type	Allows you to Enable/Disable the port. When Enable is selected, the port can forward the packets normally.
Description	Port description
State	Port admin state. **Enabled**: Enable the port. **Disabled**: Disable the port.
Link Status	Current port link status **Up**: Port is link up. **Down**: Port is link down.
Speed	Current port speed configuration and link speed status.
Duplex	Current port duplex configuration and link duplex status.

Flow Control	Current port flow control configuration and link flow control status.

Note:

1. The switch can't be managed through the disable port.
2. The switch might lose connection temporarily for the specific port (which connect to the management PC) setting. If it happens, refresh WEB GUI can recover the connection.

Edit Port Setting



Field	Description
Port	Selected Port list.
Description	Port description
State	Port admin state. **Enabled**: Enable the port. **Disabled**: Disable the port.
Link Status	Current port link status **Up**: Port is link up. **Down**: Port is link down.
Speed	Select the Port speed/duplex capabilities for the ports you need: ·**Auto**: Auto-negotiation speed/ duplex with all capabilities. ·**Auto-10M**: Auto speed with 10M ability only. ·**Auto-100M**: Auto speed with 100M ability only. ·**Auto-1000M**: Auto speed with 1000M ability only. ·**Auto-10M/100M**: Auto speed with 10M/100M abilities. ·**10M**: Force speed with 10M ability. ·**100M**: Force speed with 100M ability. ·**1000M**: Force speed with 1000M ability
Duplex	Port duplex capabilities ·**Auto**: Auto duplex ability. ·**Full**: Force Full ability.

	·**Half**: Force Half ability.
Flow Control	Port flow control capabilities ·**Auto**: Auto flow control ability. ·**Enabled**: Enable flow control ability. ·**Disabled**: Disable flow control ability.

5.2 Link Aggregation

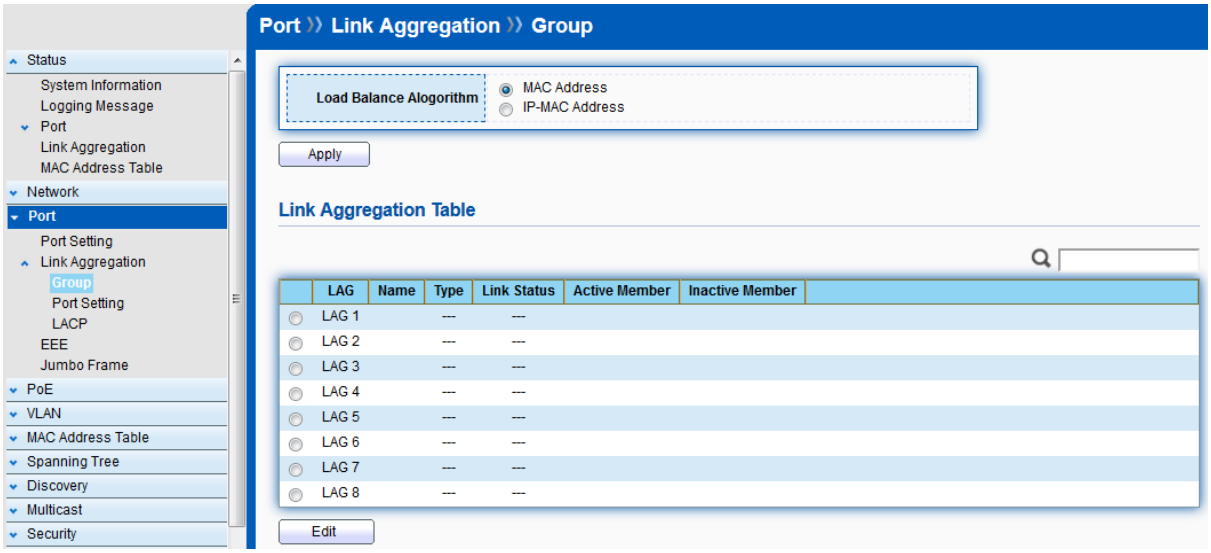
Click **Port** > **Link Aggregation**

The Link Aggregation is used to combine a number of ports together to make a single high-bandwidth data path, which can highly extend the bandwidth.

5.2.1 Trunk Group Setting

Click **Port** > **Link Aggregation** > **Group**

This page allow user to configure link aggregation group load balance algorithm and group member.

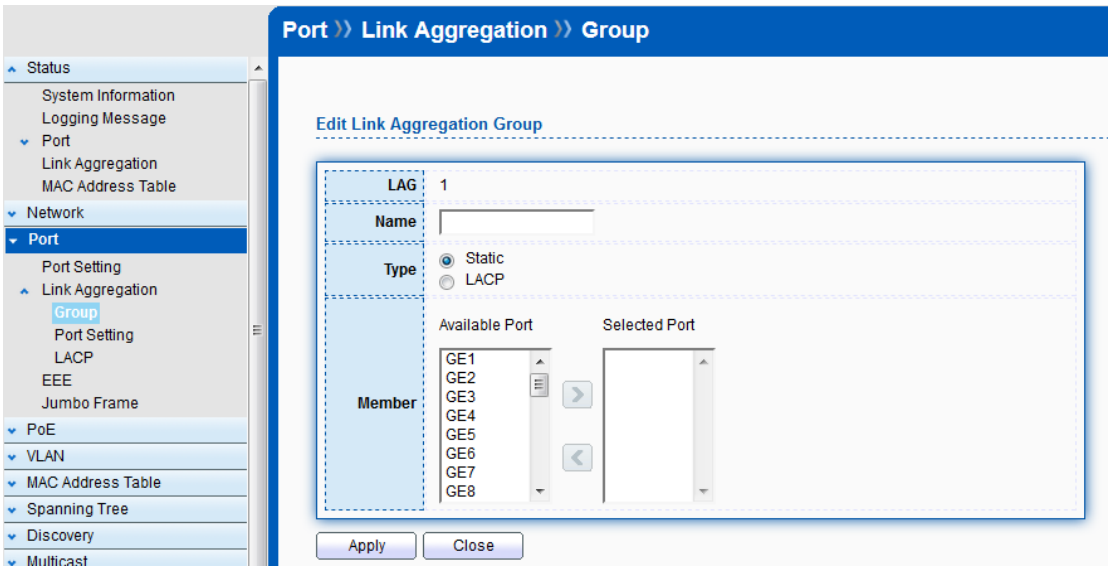


Field	Description
Load Balance Algorithm	LAG load balance distribution algorithm. Src-dst-mac: Based on MAC address Src-dst-mac-ip: Based on MAC address and IP address
LAG	LAG (Link Aggregation Group) Name.
Name	LAG port description
Type	The type of the LAG. **Static**: The group of ports assigned to a static LAG are always active members. **LACP**: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Link Status	LAG port link status.
Active Member	Active member ports of the LAG.

Inactive Member	Inactive member ports of the LAG.
Flow Control	Current port flow control configuration and link flow control status.

Select Link Aggregation Table and click "**Edit**" button to edit LAG setting.

Edit LAG Group Setting

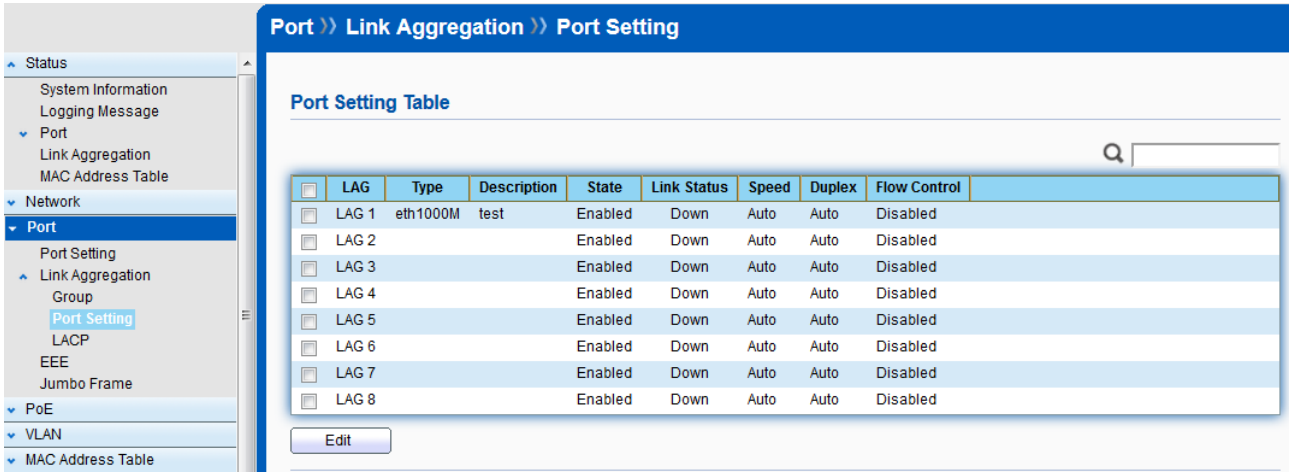


Field	Description
LAG	Selected LAG Group ID
Name	LAG port description
Type	The type of the LAG. **Static**: The group of ports assigned to a static LAG are always active members. **LACP**: The group of ports assigned to dynamic LAG are candidate ports. LACP determines which candidate ports are active member ports.
Member	Select available port to be LAG group member port.

5.2.2 Port Setting

Click **Port** > **Link Aggregation** > **Port Setting**

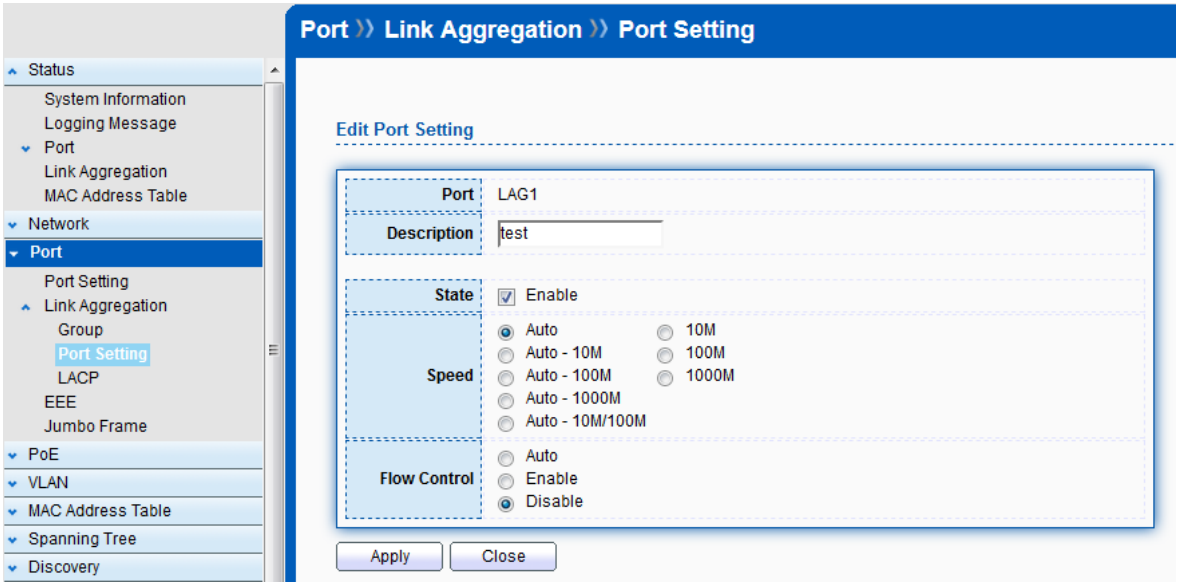
This page shows LAG port current status and allows user to edit LAG port configurations.



Field	Description
LAG	LAG Port Name
Type	LAG Port media type
Description	LAG port description
State	LAG Port admin state. **Enable**: Enable the port **Disable**: Disable the port
Link Status	Current LAG port link status. **Up**: Port is link up **Down**: Port is link down
Speed	Current LAG port speed configuration and link speed status.
Duplex	Current LAG port duplex configuration and link duplex status.
Flow Control	Current LAG port flow control configuration and link flow control status.

Select Port Setting Table and click "**Edit**" button to edit port setting.

Edit LAG Port Setting



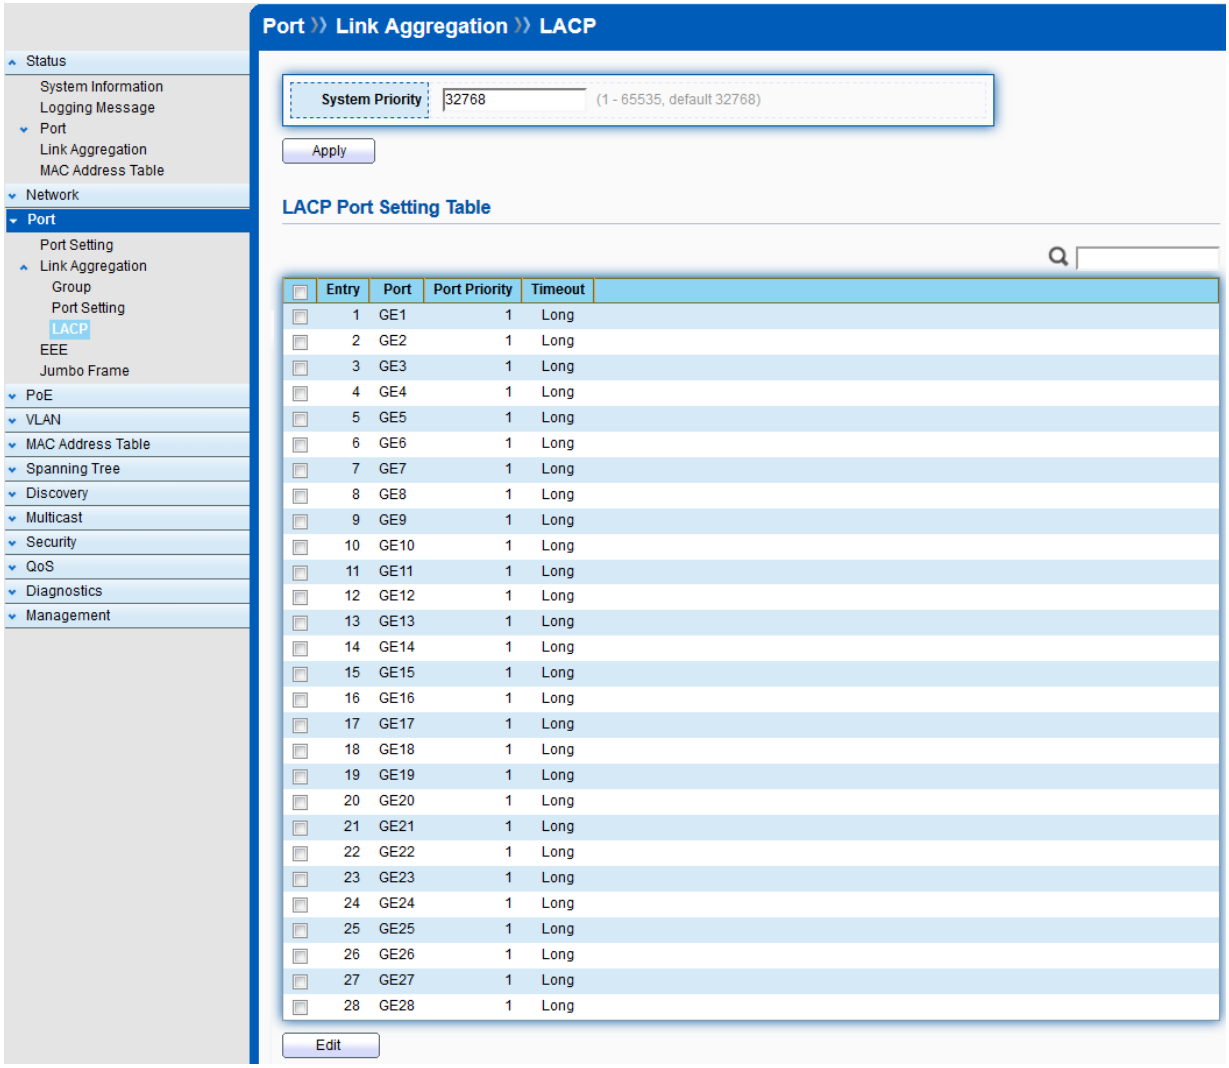
Field	Description
Port	Selected port list
Description	Port description

State	Port admin state **Enable**: Enable the port **Disable**: Disable the port
Speed	Port speed capabilities. ·**Auto**: Auto-negotiation speed/ duplex with all capabilities. ·**Auto-10M**: Auto speed with 10M ability only. ·**Auto-100M**: Auto speed with 100M ability only. ·**Auto-1000M**: Auto speed with 1000M ability only. ·**Auto-10M/100M**: Auto speed with 10M/100M abilities. ·**10M**: Force speed with 10M ability. ·**100M**: Force speed with 100M ability. ·**1000M**: Force speed with 1000M ability
Flow Control	Port flow control. ·**Auto**: Auto flow control by negotiation. ·**Enabled**: Enable flow control ability. ·**Disabled**: Disable flow control ability.

5.2.3 LACP

Click **Port** > **Link Aggregation** > **LACP**

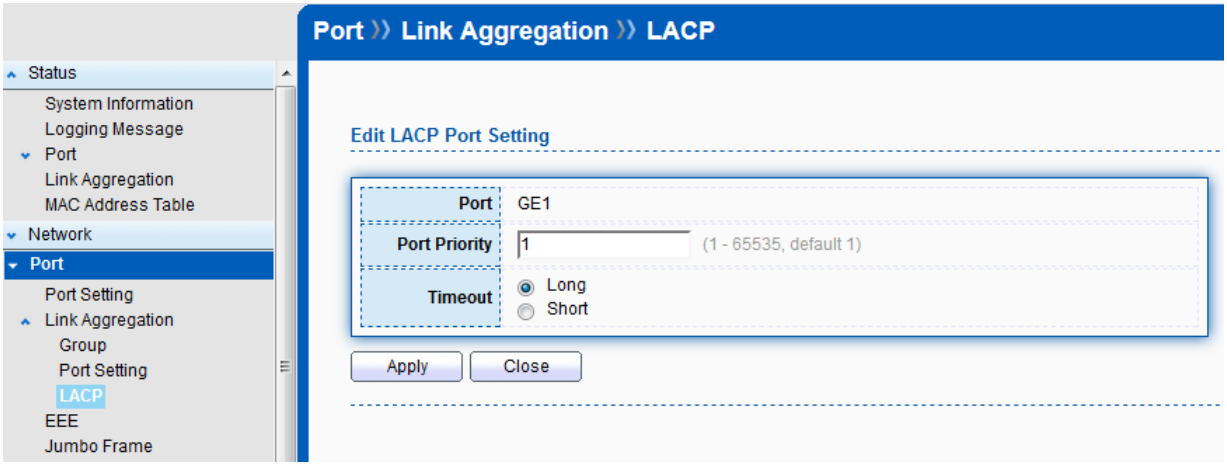
This page allow user to configure LACP global and port configurations.



Field	Description
System Priority	Configure the system priority of LACP. This decides the system priority field in LACP PDU.
Port	Port Name.
Port Priority	LACP priority value of the port.
Timeout	The periodic transmissions type of LACP PDUs. **Long**: Transmit LACP PDU with slow periodic (30s). **Short**: Transmit LACP PDU with fast periodic (1s).

Select ports and click "**Edit**" button to edit port configuration.

Edit LACP Port Setting

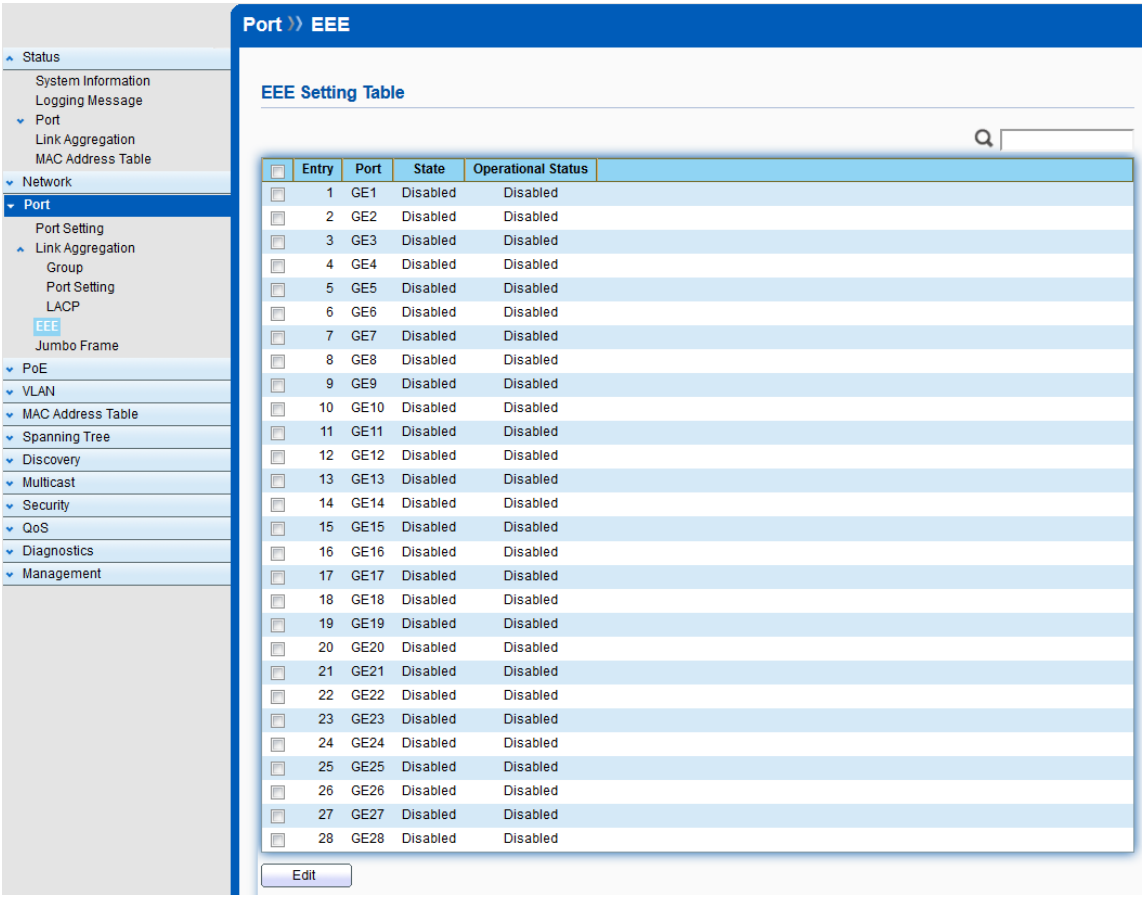


Field	Description
Port	Selected port list.
Port Priority	Enter the LACP priority value of the port.
Timeout	The periodic transmissions type of LACP PDUs. **Long**: Transmit LACP PDU with slow periodic (30s). **Short**: Transmit LACP PDU with fast periodic (1s).

5.3 EEE

Click **Port** > **EEE**

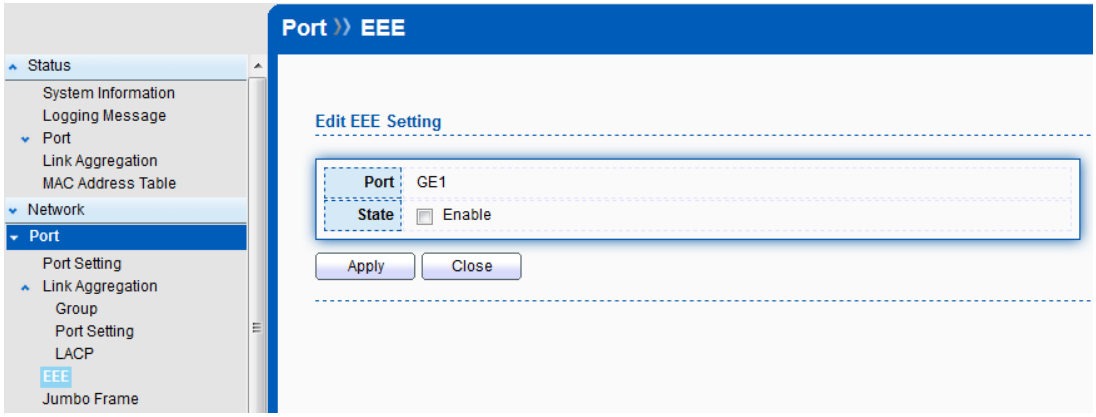
This page allows user to enable or disable EEE (Energy Efficient Ethernet) function.



Field	Description
Port	Port Name.
State	Port EEE admin state. **Enable**: EEE is enabled **Disable**: EEE is disabled.
Operational Status	Port EEE operational status. **Enable**: EEE is operating **Disable**: EEE is no operating

Select EEE and click "**Edit**" button to edit EEE configuration.

Edit EEE Setting

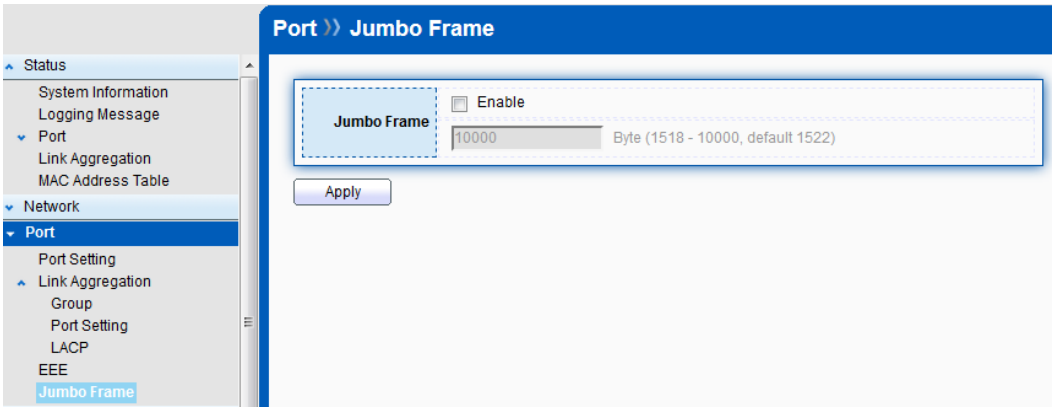


Field	Description
Port	Selected port list.
State	Port EEE admin state. **Enable**: Enable EEE **Disable**: Disabled EEE.

5.4 Jumbo Frame

Click **Port** > **Jumbo Frame**

This page allows user to configure switch jumbo frame size.



Field	Description
Jumbo Frame	Enable or Disable jumbo frame. When jumbo frame is enabled, switch max frame size is allowed to configure. (from 1518 to 10000) When jumbo frame is disabled, default frame size 1522 will be

	used.

Chapter 6 PoE

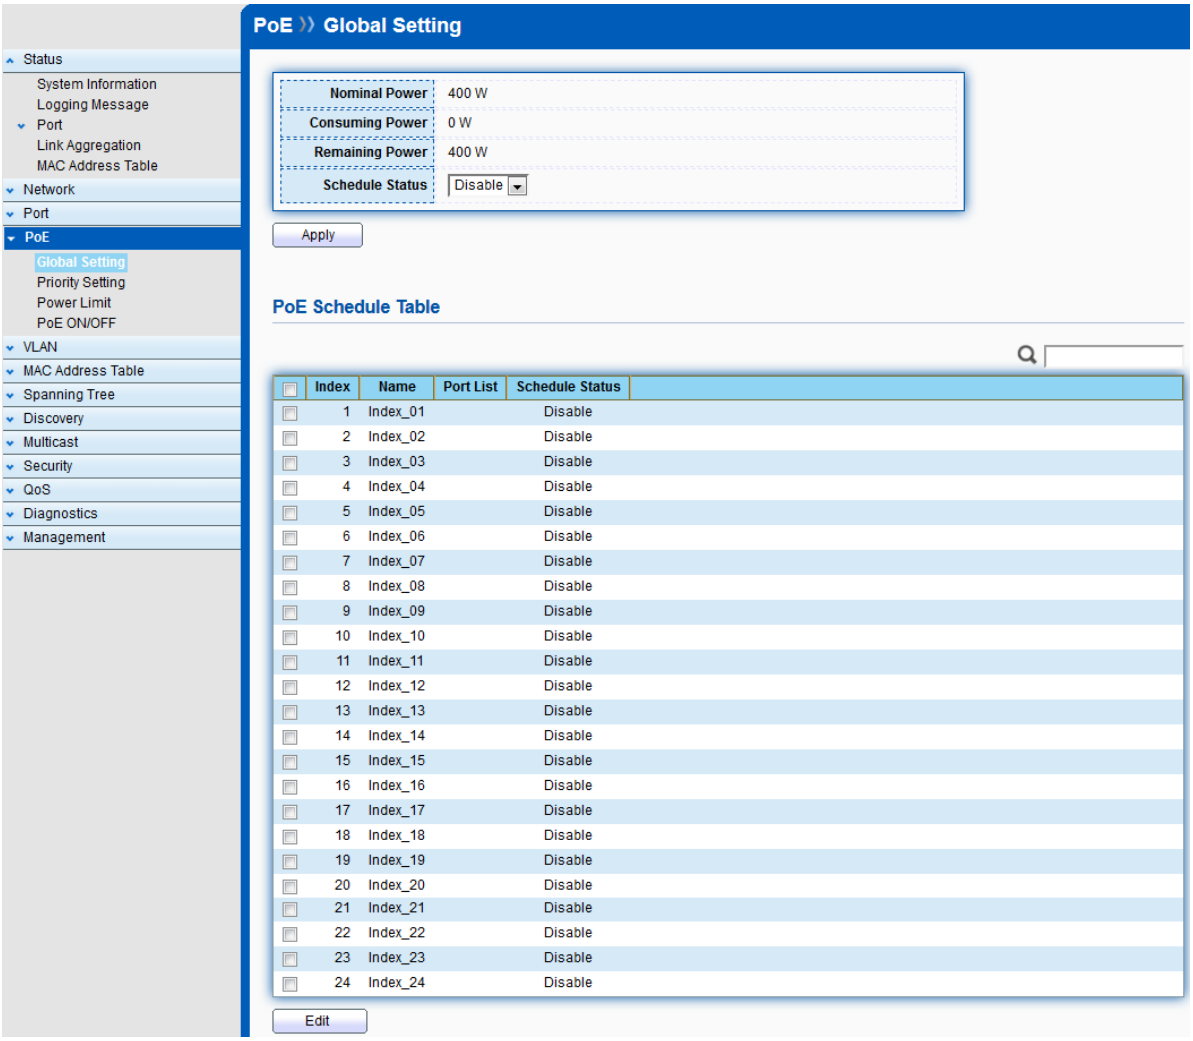
Power over Ethernet (PoE) is an advanced technology providing a whole new application aspect for networking products. A series of PoE product is powering for wide range of devices, especially useful for VoIP phones, wireless LAN access points and IP cameras.

It is deployed in applications where AC power would be inconvenient, expensive or infeasible to supply. Web Smart features are able to remote control and centralized the power management. Via a current CAT 5e cable, power and data are able to travel though. Not only is it saving costs, but also it meets the demand of energy efficiency.

6.1 Global Setting

Click **PoE** > **Global Setting**

This page allows user to configure PoE schedule.



Field	Description
Nominal Power	The PoE budge for this PoE switch.
Consuming Power	The consuming power.

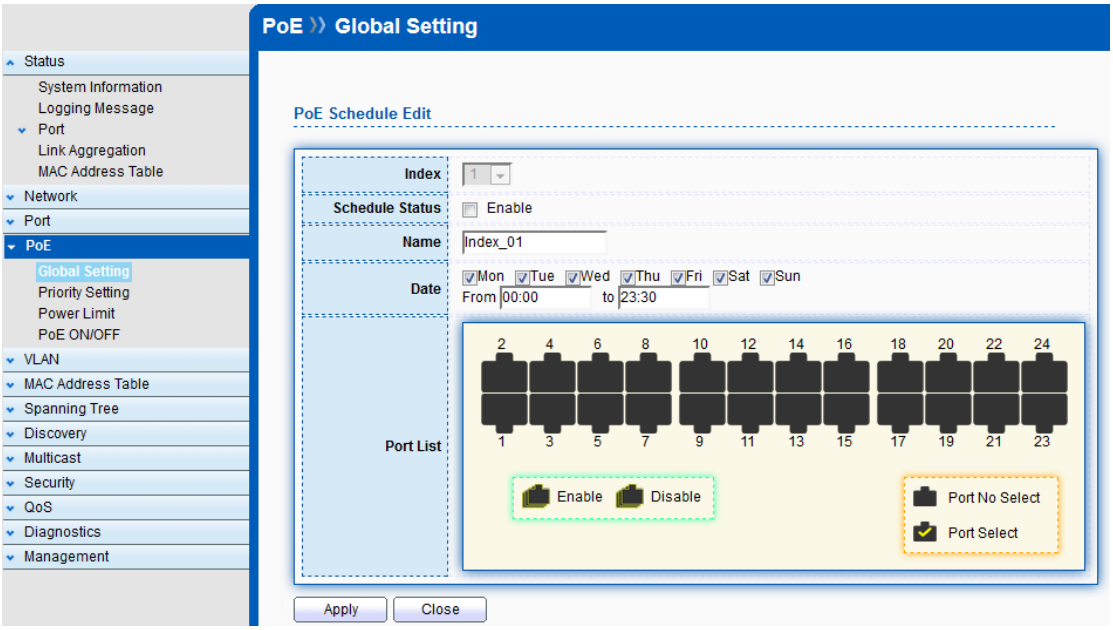
Remaining Power	The remaining power.
Schedule Status	Select Enable/Disable to enable/disable PoE schedule.

PoE Schedule Table

Field	Description
Index	The number of the PoE schedule.
Name	The name of this PoE schedule.
Port List	The ports are selected in this PoE schedule.
Schedule Status	The PoE schedule status: Enable or Disable.

Select PoE Schedule Table and click "**Edit**" button to edit PoE schedule.

Edit PoE Schedule

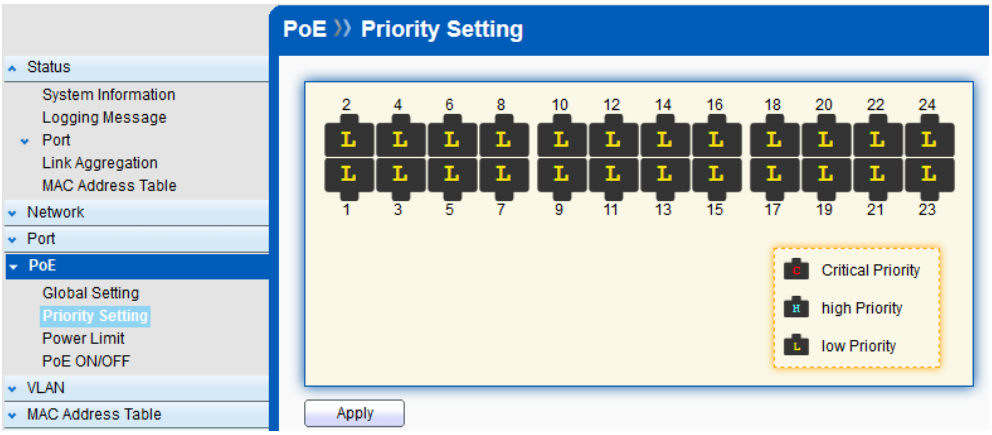


Field	Description
Index	The number of the PoE schedule.
Schedule Status	Check to enable this PoE schedule.
Name	Name for this PoE schedule.
Date	Set the date and time for this PoE schedule.
Port List	Select the ports in this PoE schedule.

6.2 Priority Setting

Click **PoE** > **Priority Setting**

This page allows user to configure PoE priority.

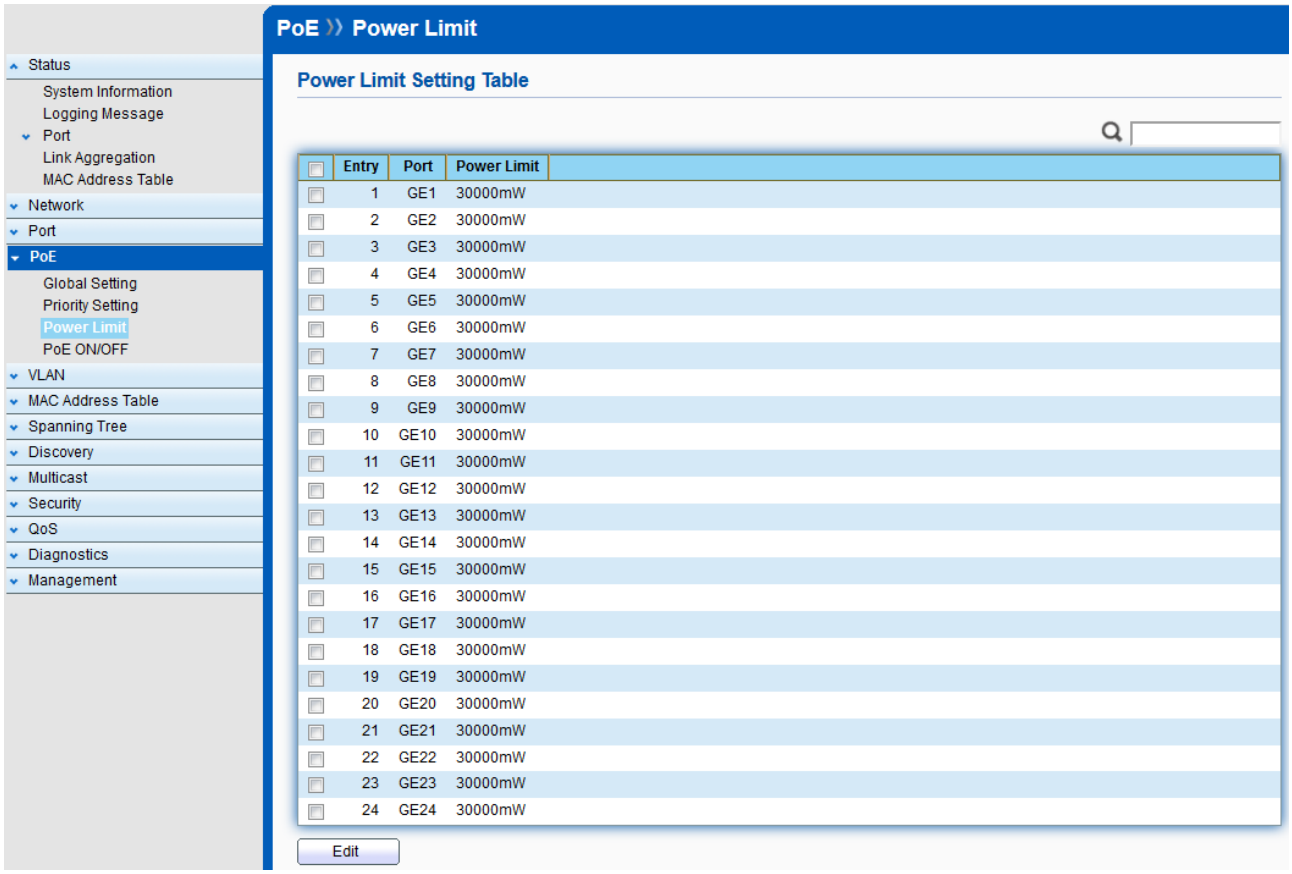


Field	Description
Priority	Select the port priority if the power supply is low. The default priority is Low. For example, if the power supply is running at 99% usage, and port 1 is prioritized as high, but port 6 is prioritized as low, port 1 is prioritized to receive power and port 6 may be denied power. The possible priority values are: 3. •**Low**: Sets the PoE priority level as low. •**High**: Sets the PoE priority level as high. •**Critical**: Sets the PoE priority level as critical.

6.3 Power Limit

Click **PoE** > **Power Limit**

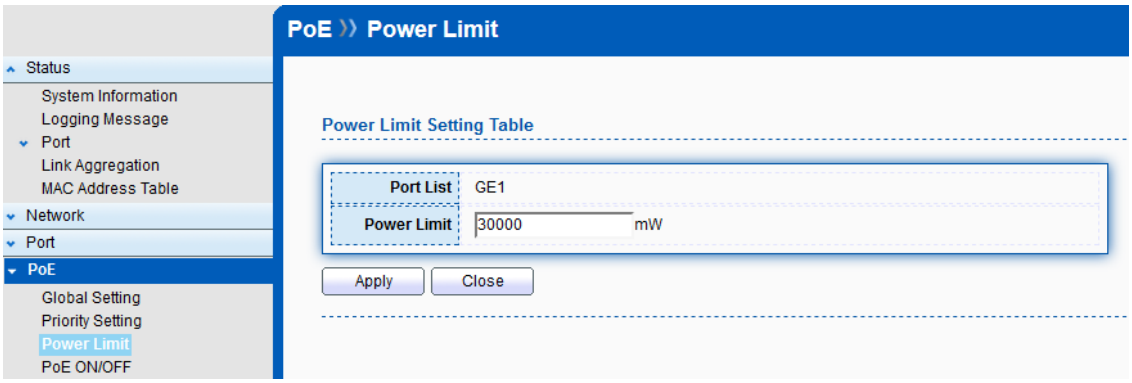
This page allows user to configure Power limit.



Field	Description
Port	Port Name.
Power Limit	The power limit for this port.

Select Port Limit Table and click "**Edit**" button to edit Power Limit.

Edit power limit

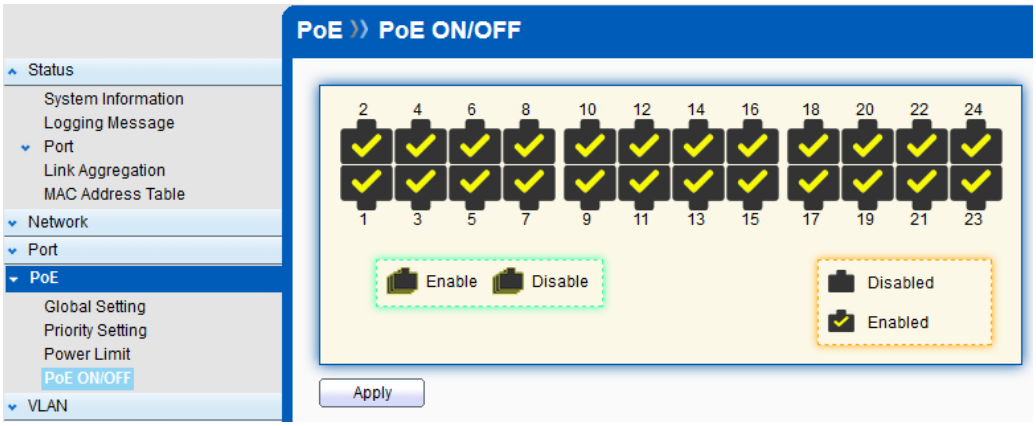


Field	Description
Port List	Port Name.
Power Limit	Sets the maximum amount of power that can be delivered in this port.

6.4 PoE ON/OFF

Click **PoE** > **PoE ON/OFF**

This page allows user to turn on/off PoE function per port.



Field	Description
PoE ON/OFF	Check to enable PoE function. Uncheck to disable PoE function.

Chapter 7 VLAN

A virtual local area network (VLAN) is a group of hosts with a common set of requirements that communicate as if they were attached to the same broadcast domain, regardless of their physical location. A VLAN has the same attributes as a physical local area network (LAN), but it allows for end stations to be grouped together even if they are not located on the same network switch. VLAN membership can configured through software instead of physically relocating devices or connections.

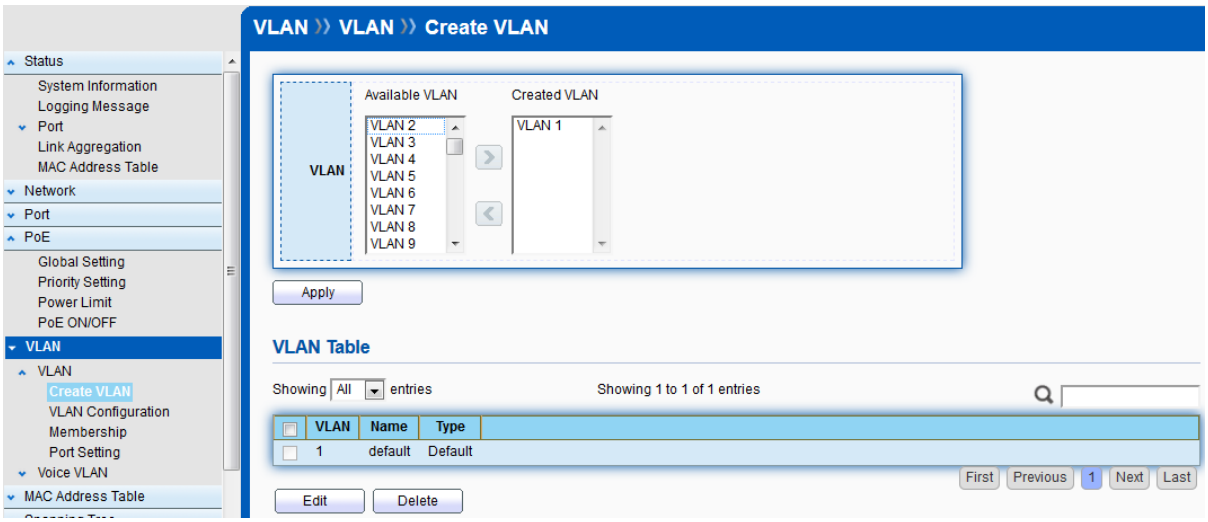
7.1 VLAN

Use the VLAN pages to configure settings of VLAN and all VLAN-related protocol.

7.1.1 Create VLAN

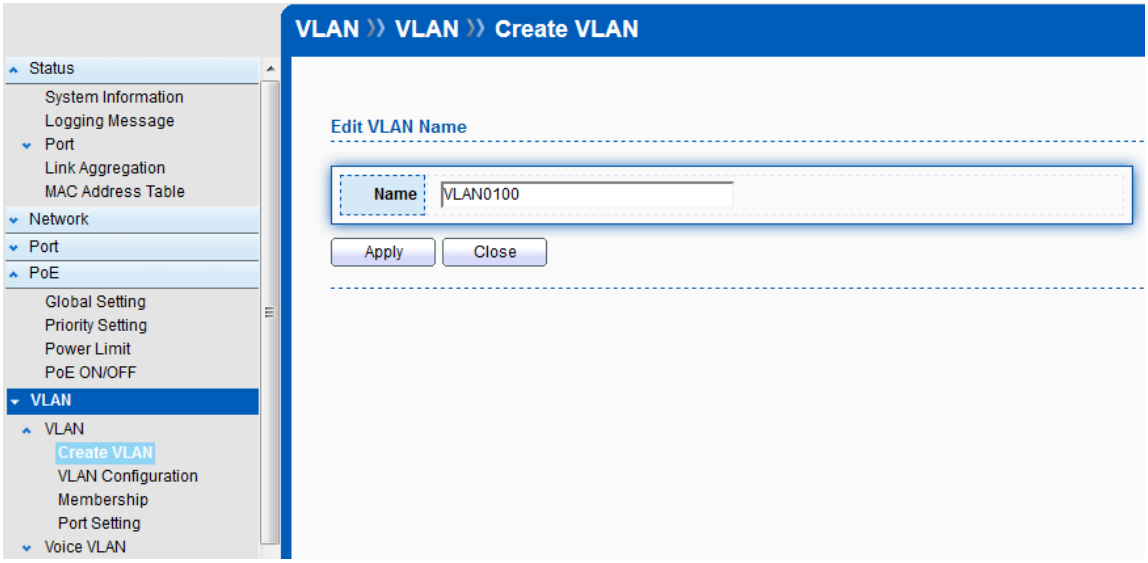
Click **VLAN** > **VLAN** > **Create VLAN**

This page allows user to add or delete VLAN ID entries and browser all VLAN entries that add statically or dynamic learned by GVRP. Each VLAN entry has a unique name, user can edit VLAN name in edit page.



Field	Description
Available VLAN	VLAN has not created yet. Select available VLANs from left box then move to right box to add.
Created VLAN	VLAN had been created. Select created VLANs from right box then move to left box to delete.

Click "**Edit**" button to edit VLAN name

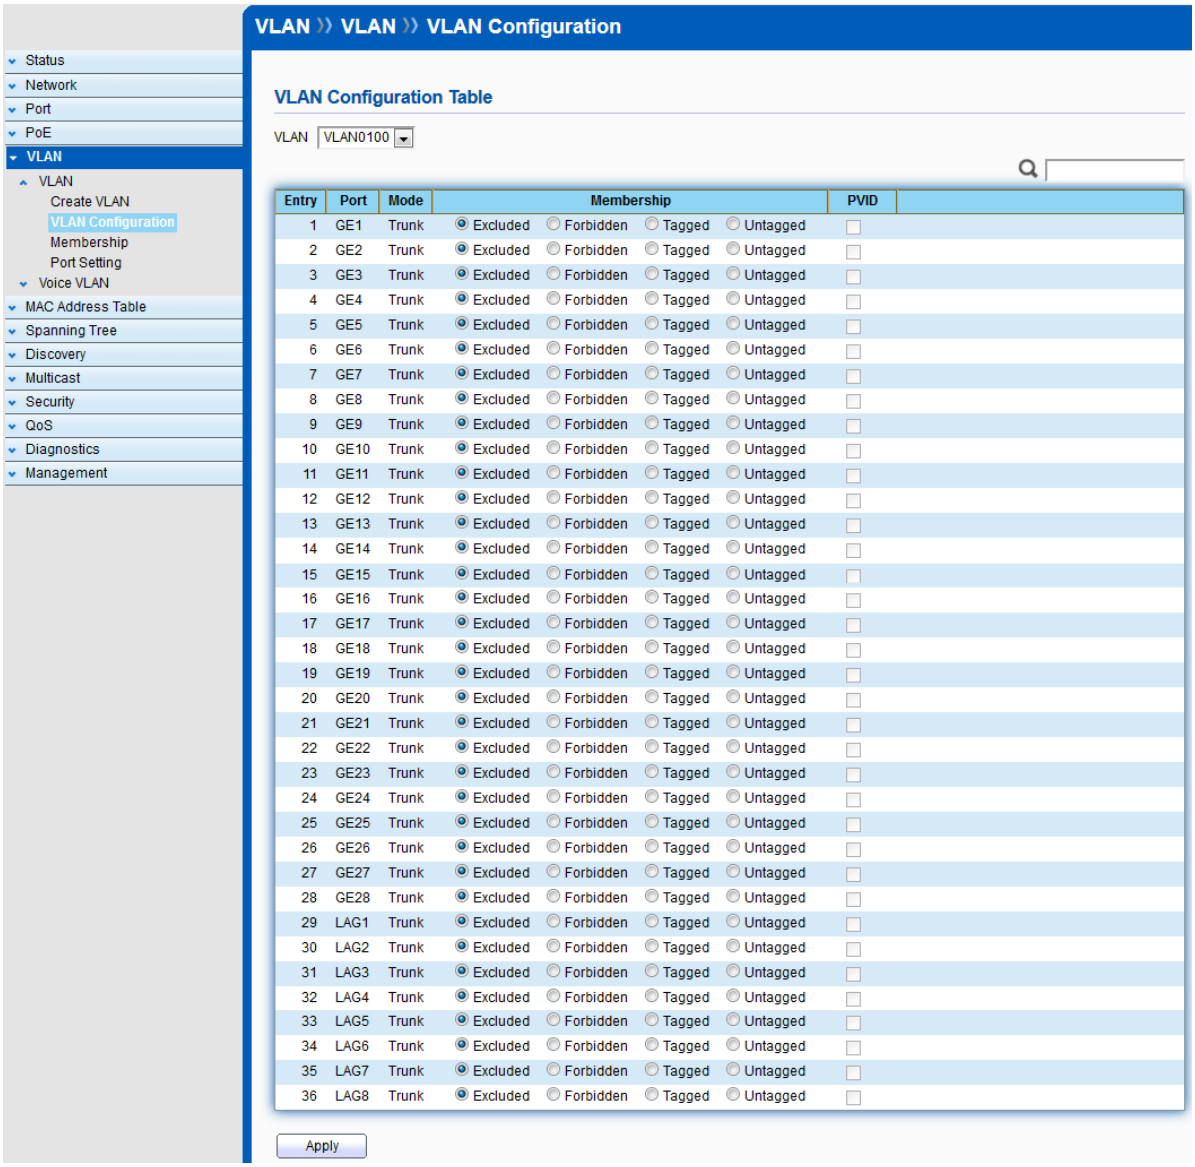


Field	Description
Name	Input VLAN name.

7.1.2 VLAN Configuration

Click **VLAN** > **VLAN** > **VLAN Configuration**

This page allow user to configure the membership for each port of selected VLAN.

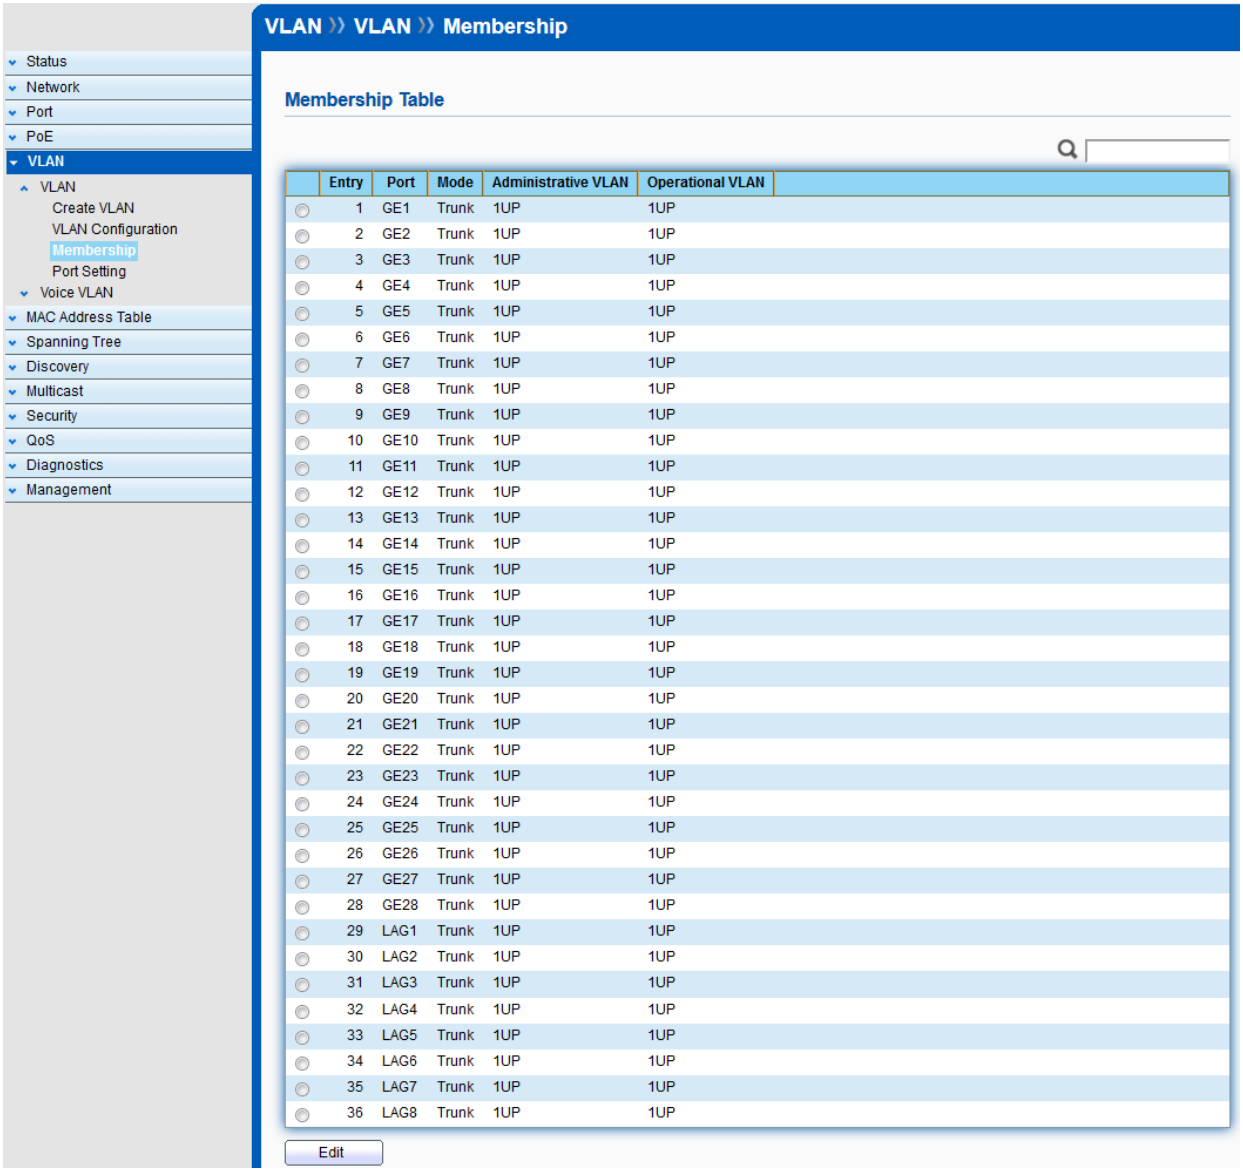


Field	Description
VLAN	Select specified VLAN ID to configure VLAN configuration.
Port	Display the interface of port entry.
Mode	Display the interface VLAN mode of port.
Membership	Select the membership for this port of the specified VLAN ID. **Forbidden**: Specify the port is forbidden in the VLAN. **Excluded**: Specify the port is excluded in the VLAN. **Tagged**: Specify the port is tagged member in the VLAN. **Untagged**: Specify the port is untagged member in the VLAN.
PVID	Display if it is PVID of interface.

7.1.3 Membership

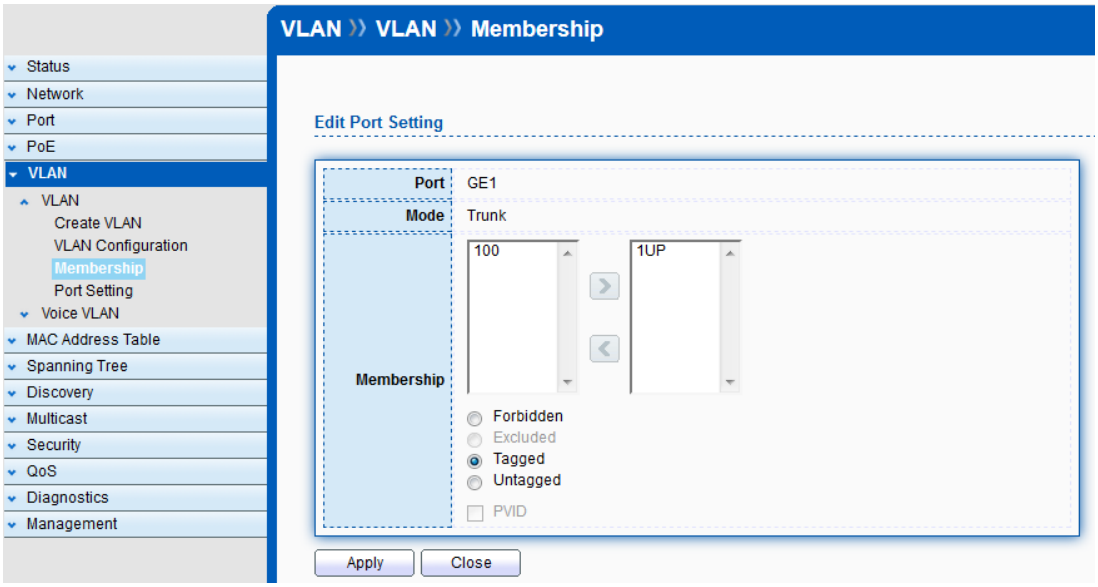
Click **VLAN** > **VLAN** > **Membership**

This page allow user to view membership information for each port and edit membership for specified interface.



Field	Description
Port	Display the interface of port entry.
Mode	Display the interface VLAN mode of port.
Administrative VLAN	Display the administrative VLAN list of this port.
Operational VLAN	Display the operational VLAN list of this port. Operational VLAN means the VLAN status that really runs in device. It may different to administrative VLAN.

Click "**Edit**" button to edit VLAN membership

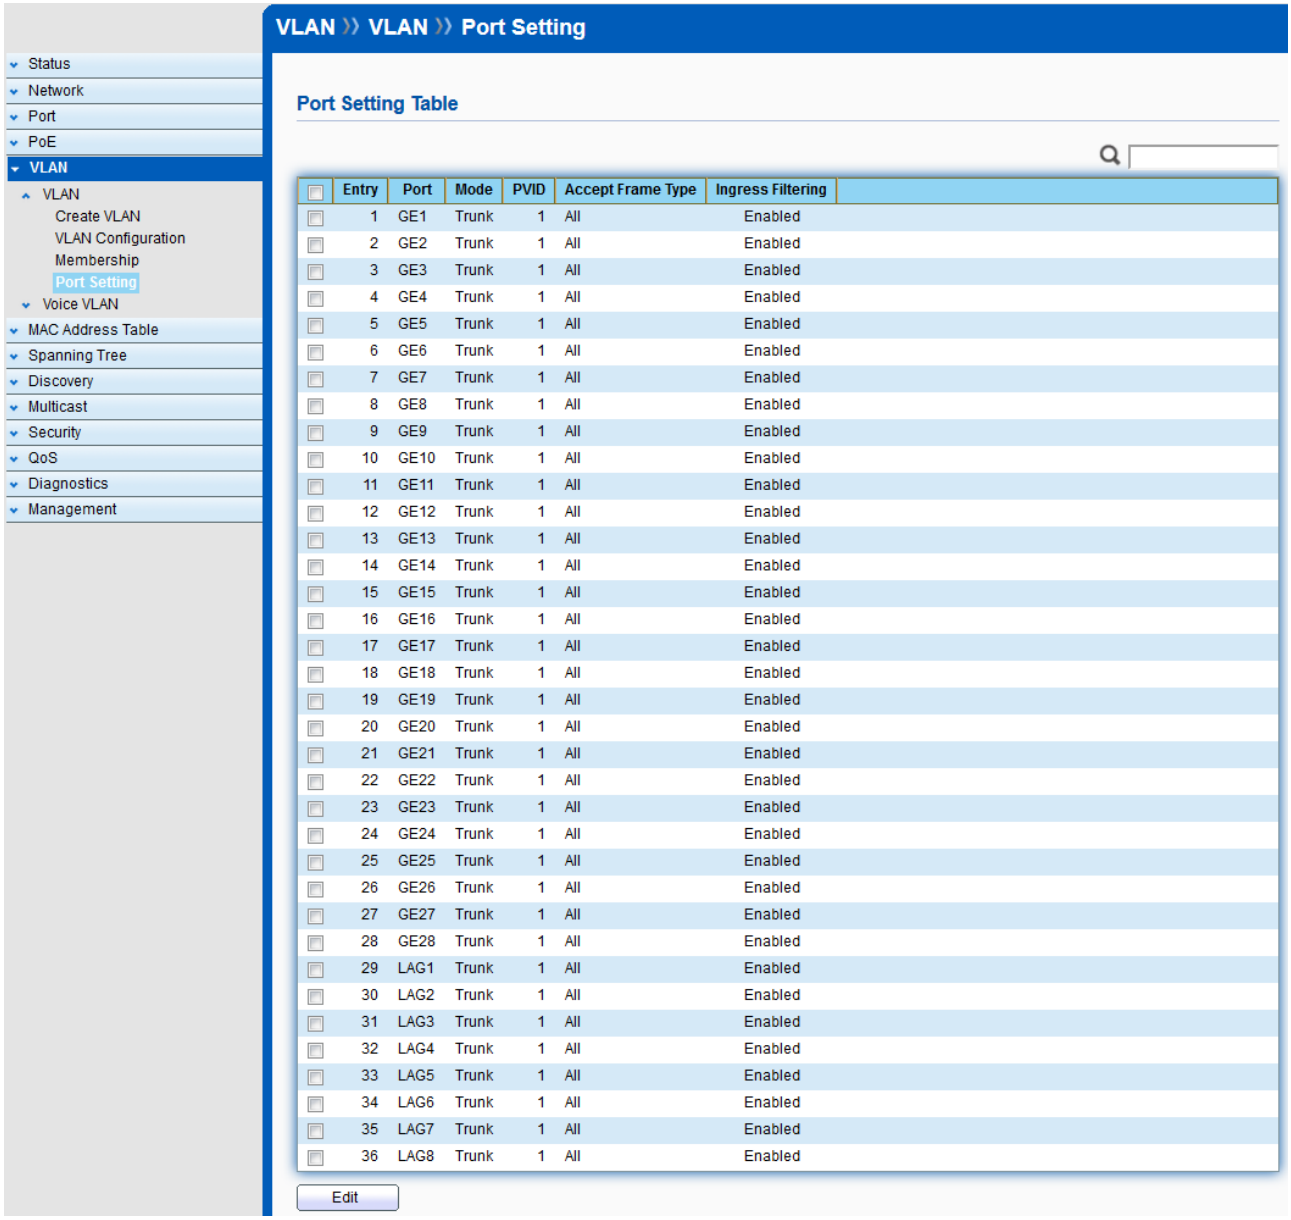


Field	Description
Port	Display the interface of port entry.
Mode	Display the VLAN mode of interface.
Membership	Select VLANs of left box and select one of following membership then move to right box to add membership. Select VLANs of right box then move to left box to remove membership. Tagging membership may not choose in differ VLAN port mode. **Forbidden**: Set VLAN as forbidden VLAN. **Excluded**: Set option is always disabled. **Tagged**: Set VLAN as tagged VLAN. **Untagged**: Set VLAN as untagged VLAN. **PVID**: Check this checkbox to select the VLAN ID to be the port-based VLAN ID for this port. PVID may auto select or can't select in differ settings.

7.1.4 Port Setting

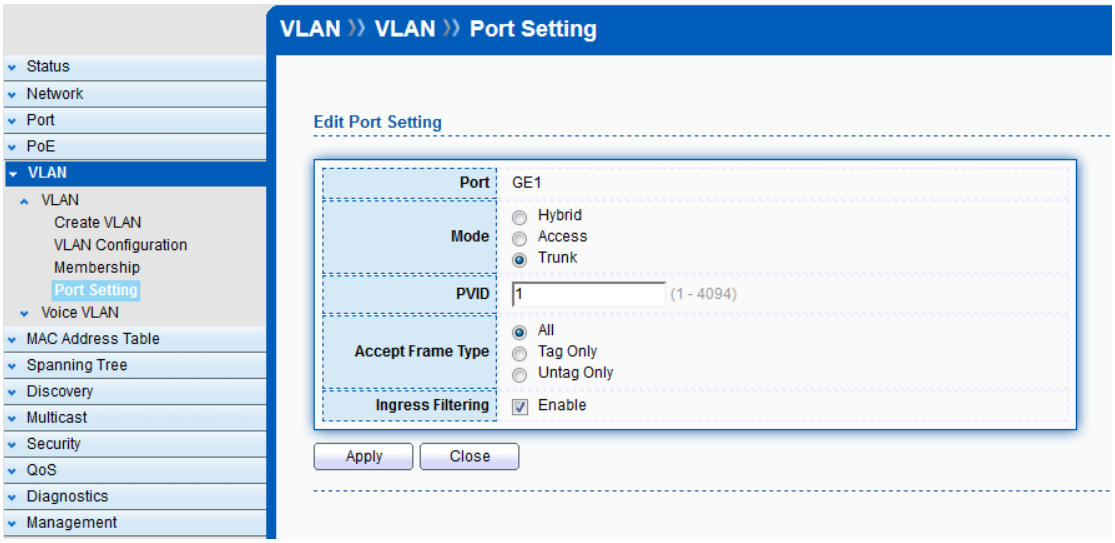
Click **VLAN** > **VLAN** > **Port Setting**

This page allows user to configure port VLAN settings such as VLAN port mode, PVID etc. The attributes depend on different VLAN port mode.



Field	Description
Port	Display the interface.
Mode	Display the VLAN mode of port.
PVID	Display the Port-based VLAN ID of port.
Accept Frame Type	Display accepted frame type of port.
Ingress Filtering	Display ingress filter status of port.

Click "**Edit**" button to edit VLAN port setting



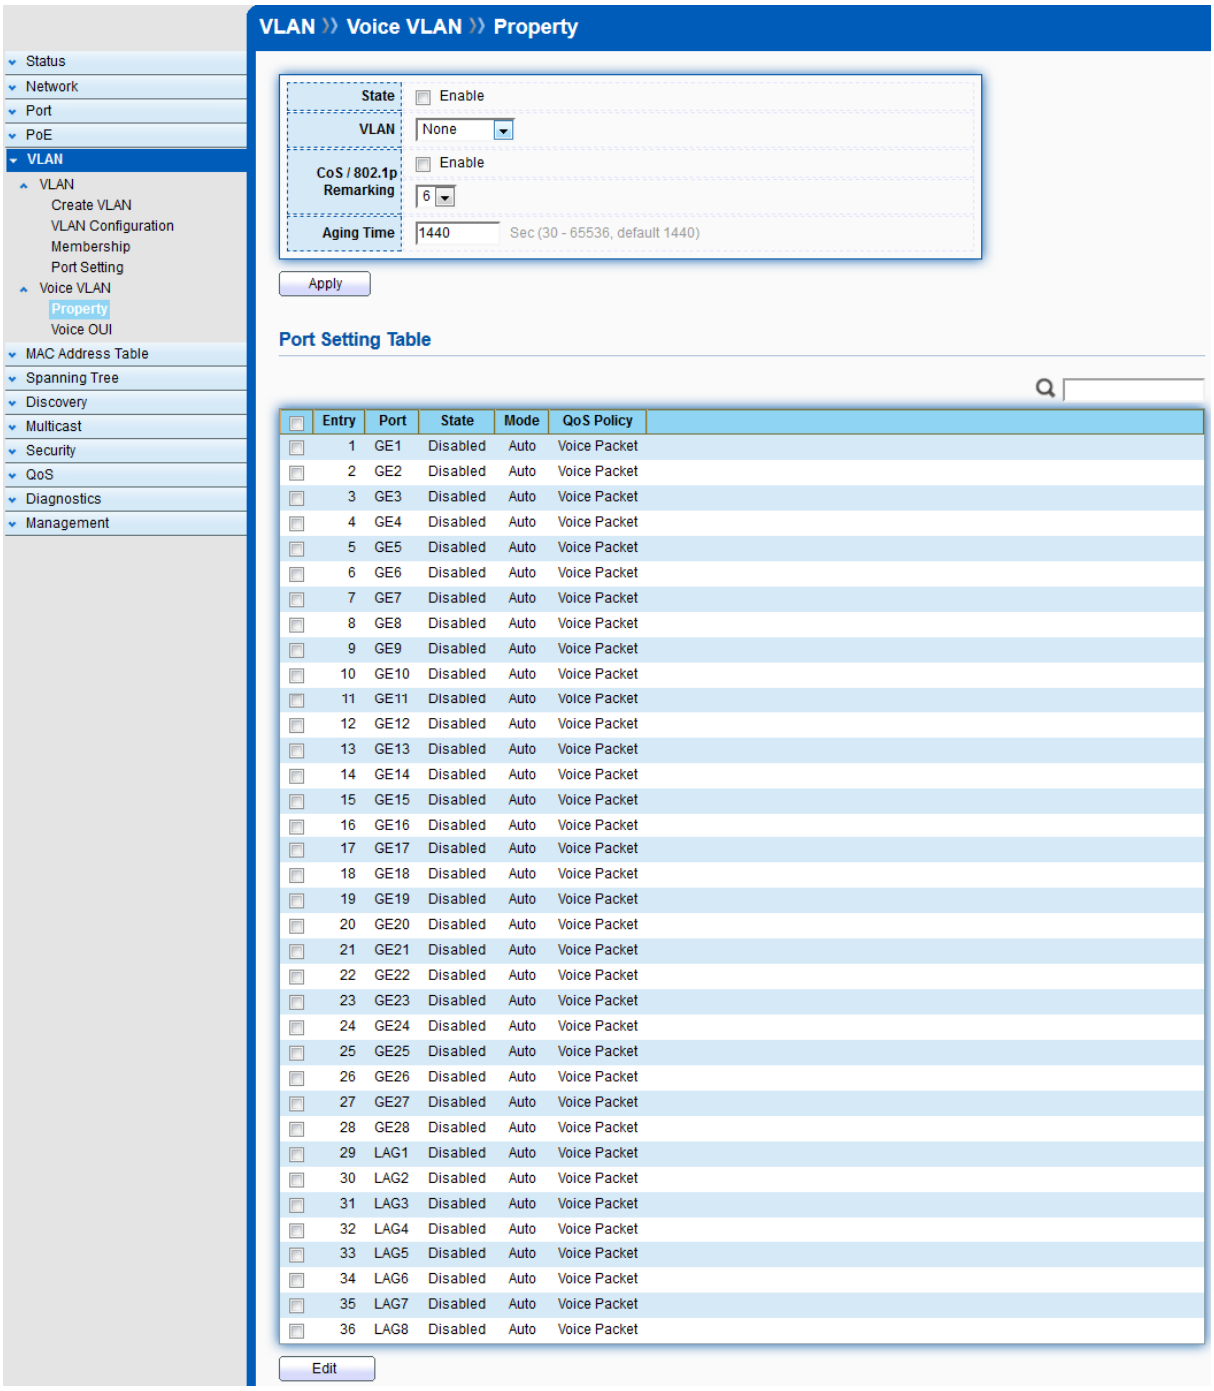
Field	Description
Port	Display the interface of port entry.
Mode	Select the VLAN mode of the interface. **Hybrid**: Support all functions as defined in IEEE802.1Q specification. **Access**: Accepts only untagged frames and join an untagged VLAN. **Trunk**: An untagged member of one VLAN at most, and is a tagged member of zero or more VLANs.
PVID	Specify the port-based VLAN ID (1~4094). It's only available with hybrid and Trunk mode.
Accept Frame Type	Specify the acceptable-frame-type of the specified interfaces. It's only available with Hybrid mode.
Ingress Filtering	Specify the status of ingress filtering. It's only available with Hybrid mode.

7.2 Voice VLAN

7.2.1 Property

Click **VLAN** > **Voice VLAN** > **Property**

This page allows user to configure global and per interface setting of voice VLAN.

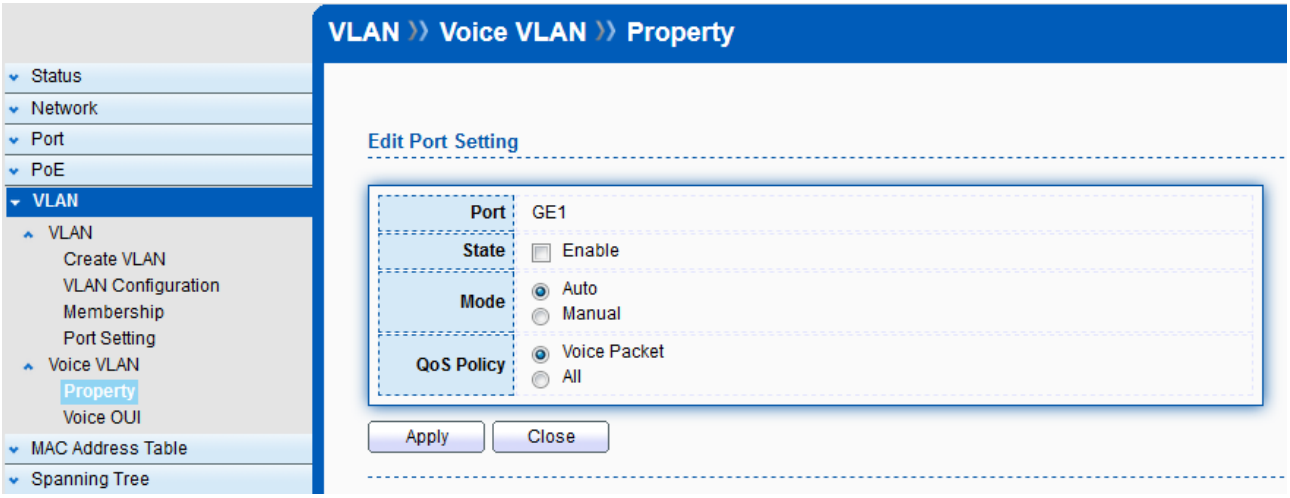


Field	Description
State	Set checkbox to enable or disable voice VLAN function.
VLAN	Select Voice VLAN ID. Voice VLAN ID cannot be default VLAN.
Cos/802.1p	Select a value of VPT. Qualified packets will use this VPT value as inner priority.
Remarking	Set checkbox to enable or disable 1p remarking. If enabled, qualified packets will be remark by this value.
Aging Time	Input value of aging time. Default is 1440 minutes. A voice VLAN entry will be age out after this time if without any packet pass through.

Field	Description
Port	Display port entry

State	Display enable/disable status of interface.
Mode	Display voice VLAN mode.
QoS Policy	Display voice VLAN remark will effect which kind of packet

Click "**Edit**" button to edit Property Port.

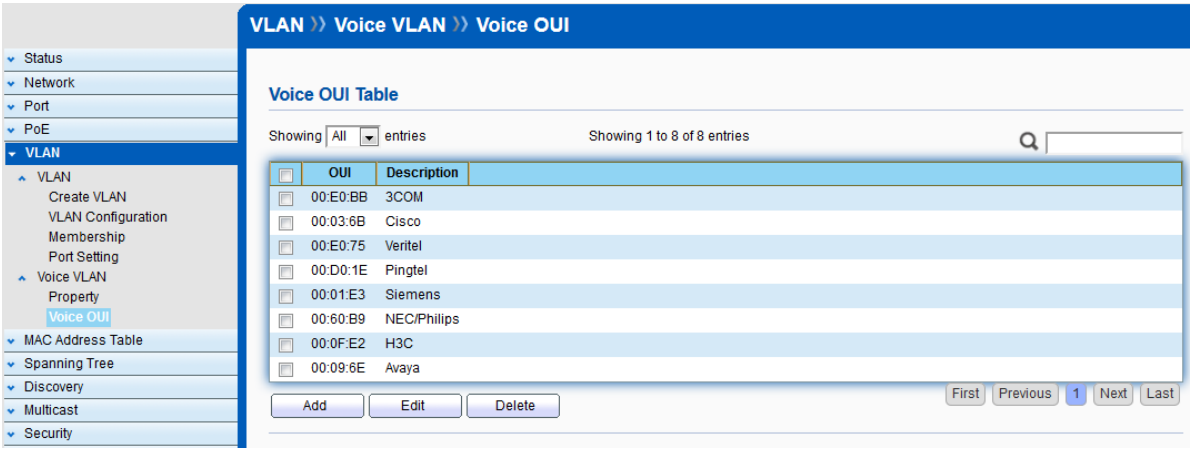


Field	Description
Port	Display selected port to be edited.
State	Set checkbox to enable/disable voice VLAN function of interface.
Mode	Select port voice VLAN mode. **Auto**: Voice VLAN auto detect packets that match OUI table and add received port into voice VLAN ID tagged member. **Manual**: User need add interface to VLAN ID tagged member manually.
QoS Policy	Select port QoS Policy mode **Voice Packet**: QoS attributes are applied to packets with OUIs in the source MAC address. **All**: QoS attributes are applied to packets that are classified to the Voice VLAN.

7.2.2 Voice OUI

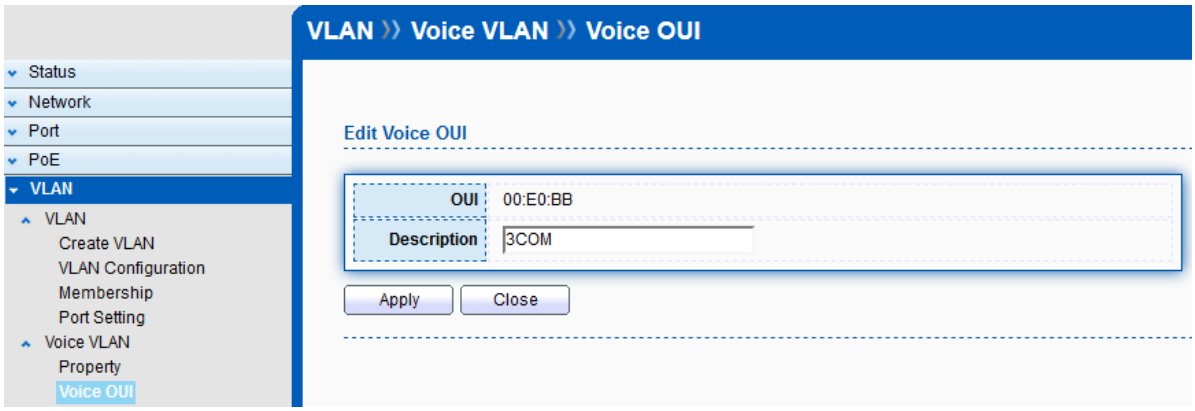
Click **VLAN** > **Voice VLAN** > **Voice OUI**

This page allow user to add, edit or delete OUI MAC addresses. Default has 8 pre-defined OUI MAC.



Field	Description
OUI	Display OUI MAC address.
Description	Display description of OUI entry.

Click "**Add**" or "**Edit**" buttons to edit Voice OUI.



Field	Description
OUI	Input OUI MAC address. Can't be edited in edit dialog.
Description	Input description of the specified MAC address to the voice VLAN OUI table.

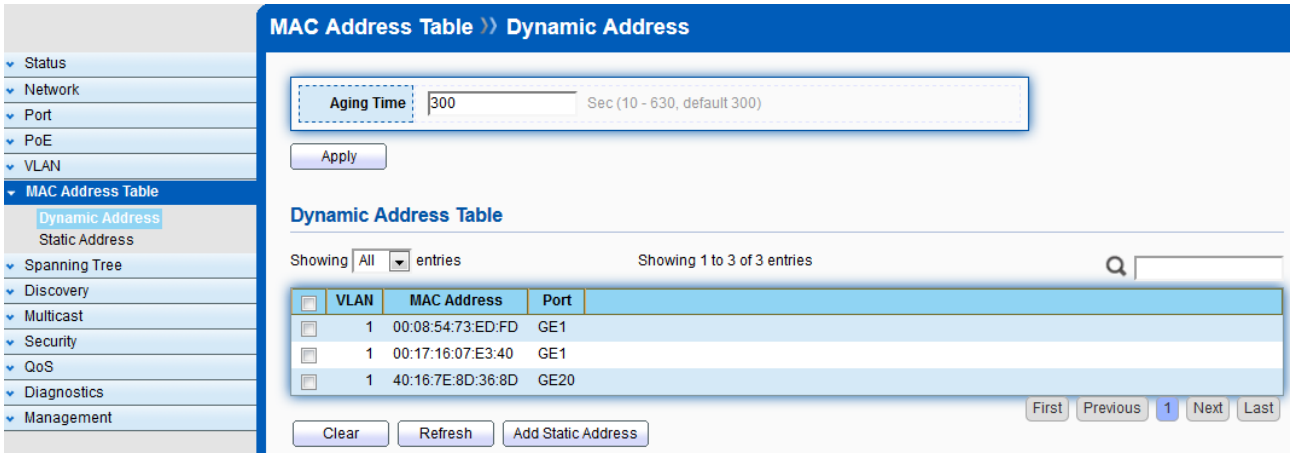
Chapter 8 MAC Address Table

Use the MAC Address Table pages to show dynamic MAC table and configure settings for static MAC entries.

8.1 Dynamic Address

Click **MAC Address Table** > **Dynamic Address**

Configure the aging time of the dynamic address.

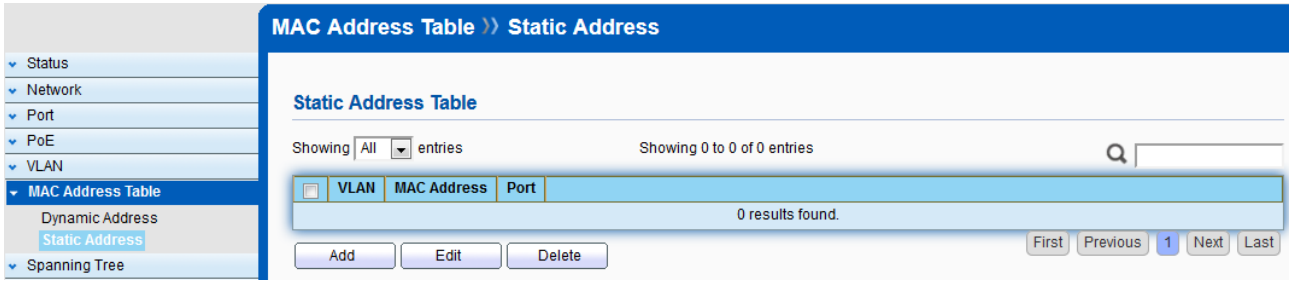


Field	Description
Aging Time	The time in seconds that an entry remains in the MAC address table. Its valid range is from 10 to 630 seconds, and the default value is 300 seconds

8.2 Static Address

Click **MAC Address Table** > **Static Address**

To display the static MAC address.



Field	Description
MAC Address	The MAC address to which packets will be statically fowarded.
VLAN	Specify the VLAN to show or clear MAC entries.
Port	Interface or port number.

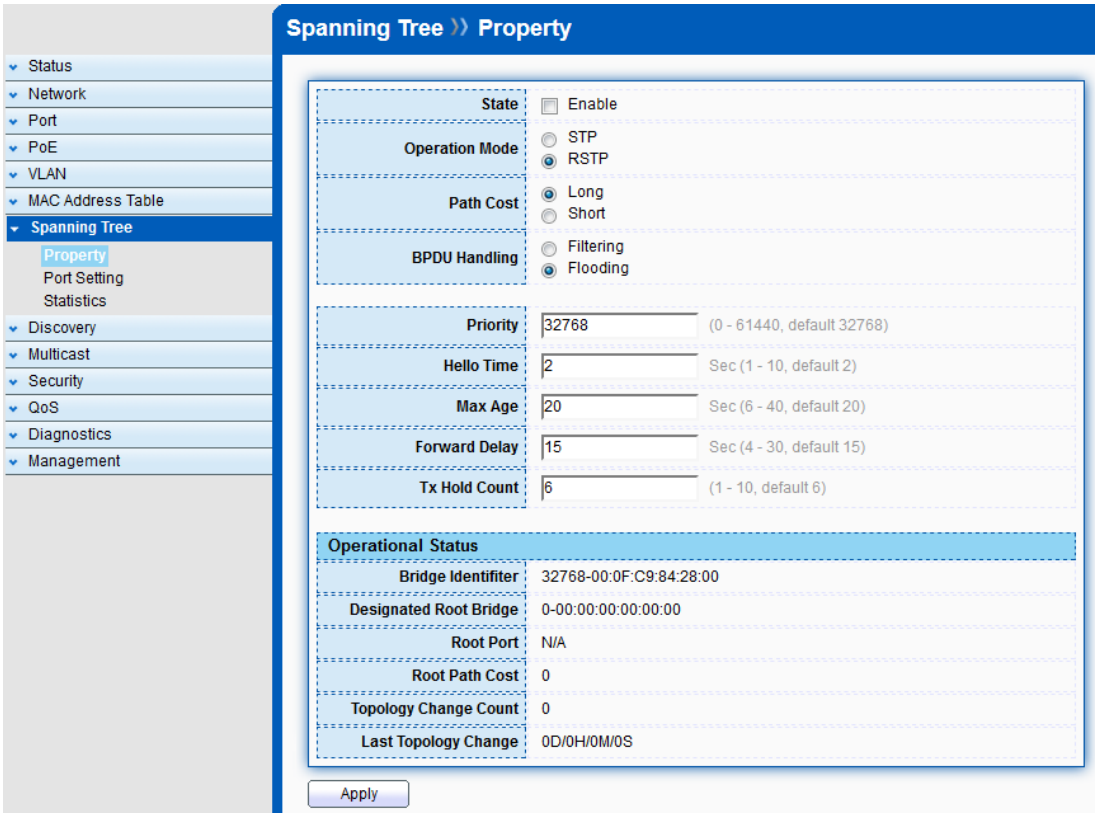
Chapter 9 Spanning Tree

The Spanning Tree Protocol (STP) is a network protocol that ensures a loop-free topology for any bridged Ethernet local area network.

9.1 Property

Click **STP** > **Property**

Configure and display STP property configuration.



Field	Description
State	Enable/Disable the STP on the switch.
Operation Mode	Specify the STP operation mode. **STP**: Enable the Spanning Tree (STP) operation. **RSTP**: Enable the Rapid Spanning Tree (RSTP) operation.
Path Cost	Specify the path cost method. **Long**: Specifies that the default port path costs are within the range: 1~200,000,000. **Short**: Specifies that the default port path costs are within the range: 1~65,535.
BPDU Handling	Specify the BPDU forward method when the STP is disabled. **Filtering**: Filter the BPDU when STP is disabled. **Flooding**: Flood the BPDU when STP is disabled.
Priority	Specify the bridge priority. The valid range is from 0 to 61440, and the value should be the multiple of 4096. It ensures the probability that the switch is selected as the root bridge, and the lower value has the higher priority for the switch to be selected as the root bridge of the topology.

Hello Time	Specify the STP hello time in second to broadcast its hello message to other bridge by Designated Ports. Its valid range is from 1 to 10 seconds.
Max Age	Specify the time interval in seconds for a switch to wait the configuration messages, without attempting to redefine its own configuration.
Forward Delay	Specify the STP forward delay time, which is the amount of time that a port remains in the Listening and Learning states before it enters the Forwarding state. Its valid range is from 4 to 10 seconds.
TX Hold Count	Specify the tx-hold-count used to limit the maximum numbers of packets transmission per second. The valid range is from 1 to 10.

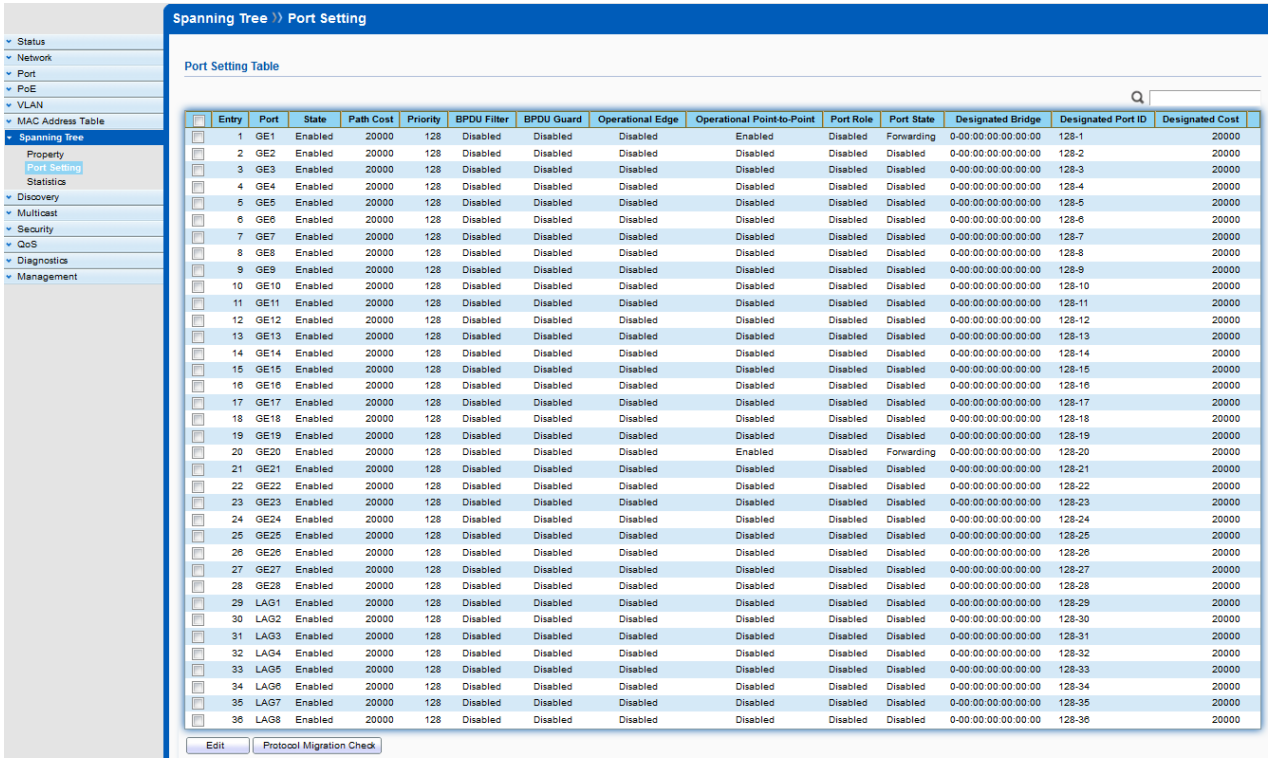
STP operational status

Field	Description
Bridge Identifier	Bridge identifier of the switch.
Designated Root Identifier	Bridge identifier of the designated root bridge.
Root Port	Operational root port of the switch.
Root Path Cost	Operational root path cost.
Topology Change Count	Numbers of the topology changes.
Last Topology Change	The last time for the topology change.

9.2 Port Setting

Click **STP** > **Port Setting**

Configure and display STP port settings.

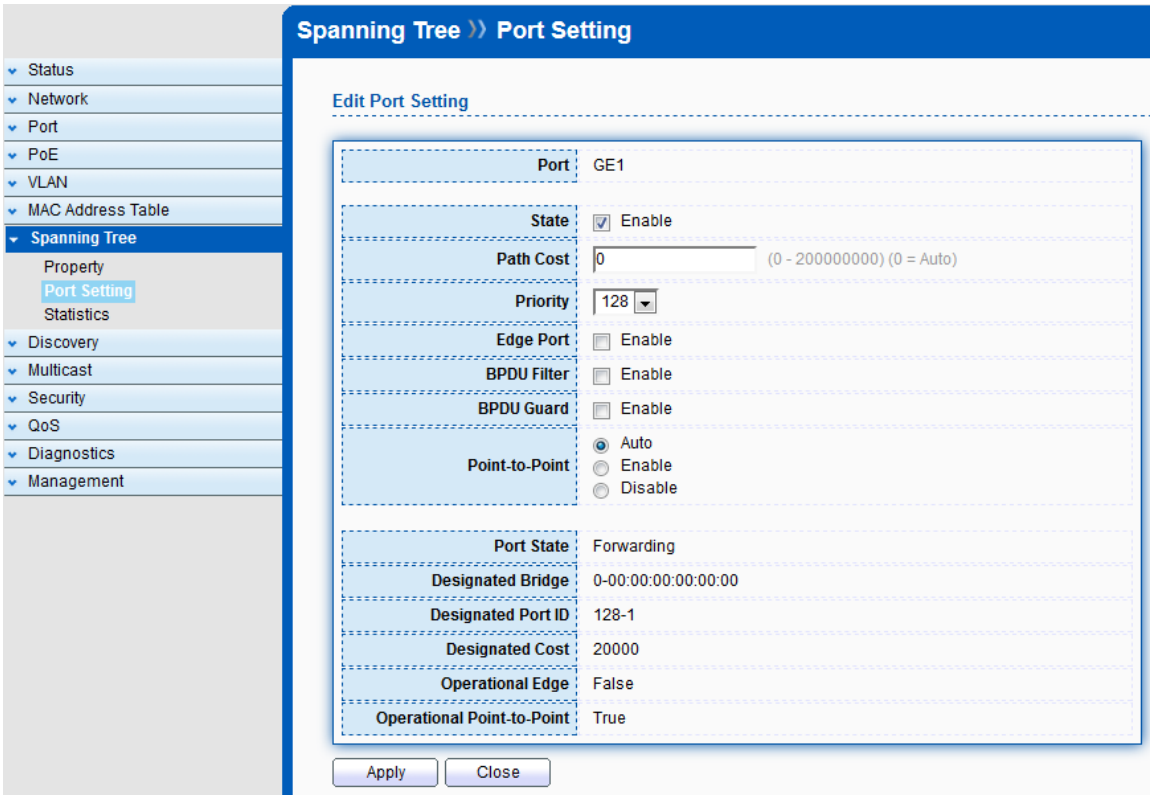


Field	Description
Port	Specify the interface ID or the list of interface IDs.
State	The operational state on the specified port.
Path Cost	STP path cost on the specified port.
Priority	STP priority on the specified port.
Operation Edge	The operational edge port on the specified port.
Operational Point-to-Point	The operational edge point-to-point status on the specified port.
Port Role	The current port role on the specified port. The possible values are: "Disabled", "Master", "Root", "Designated", "Alternative", and "Backup"
Port State	The current port state on the specified port. The possible values are: "Disabled", "Discarding", "Learning", and "Forwarding".
Designated Bridge	The bridge ID of the designated bridge.
Designated Port ID	The designated port ID on the switch.
Designated Cost	The path cost of the designated port on the switch.

STP port setting buttons

Field	Description
Protocol Migration Check	Restart the Spanning Tree Protocol (STP) migration process (re-negotiate with its neighborhood) on the specific interface.

Edit STP port setting



Field	Description
State	Enable/Disable the STP on the specified port
Path Cost	Specify the STP path cost on the specified port.
Priority	Specify the STP priority on the specified port.
Edge Port	Specify the edge mode.

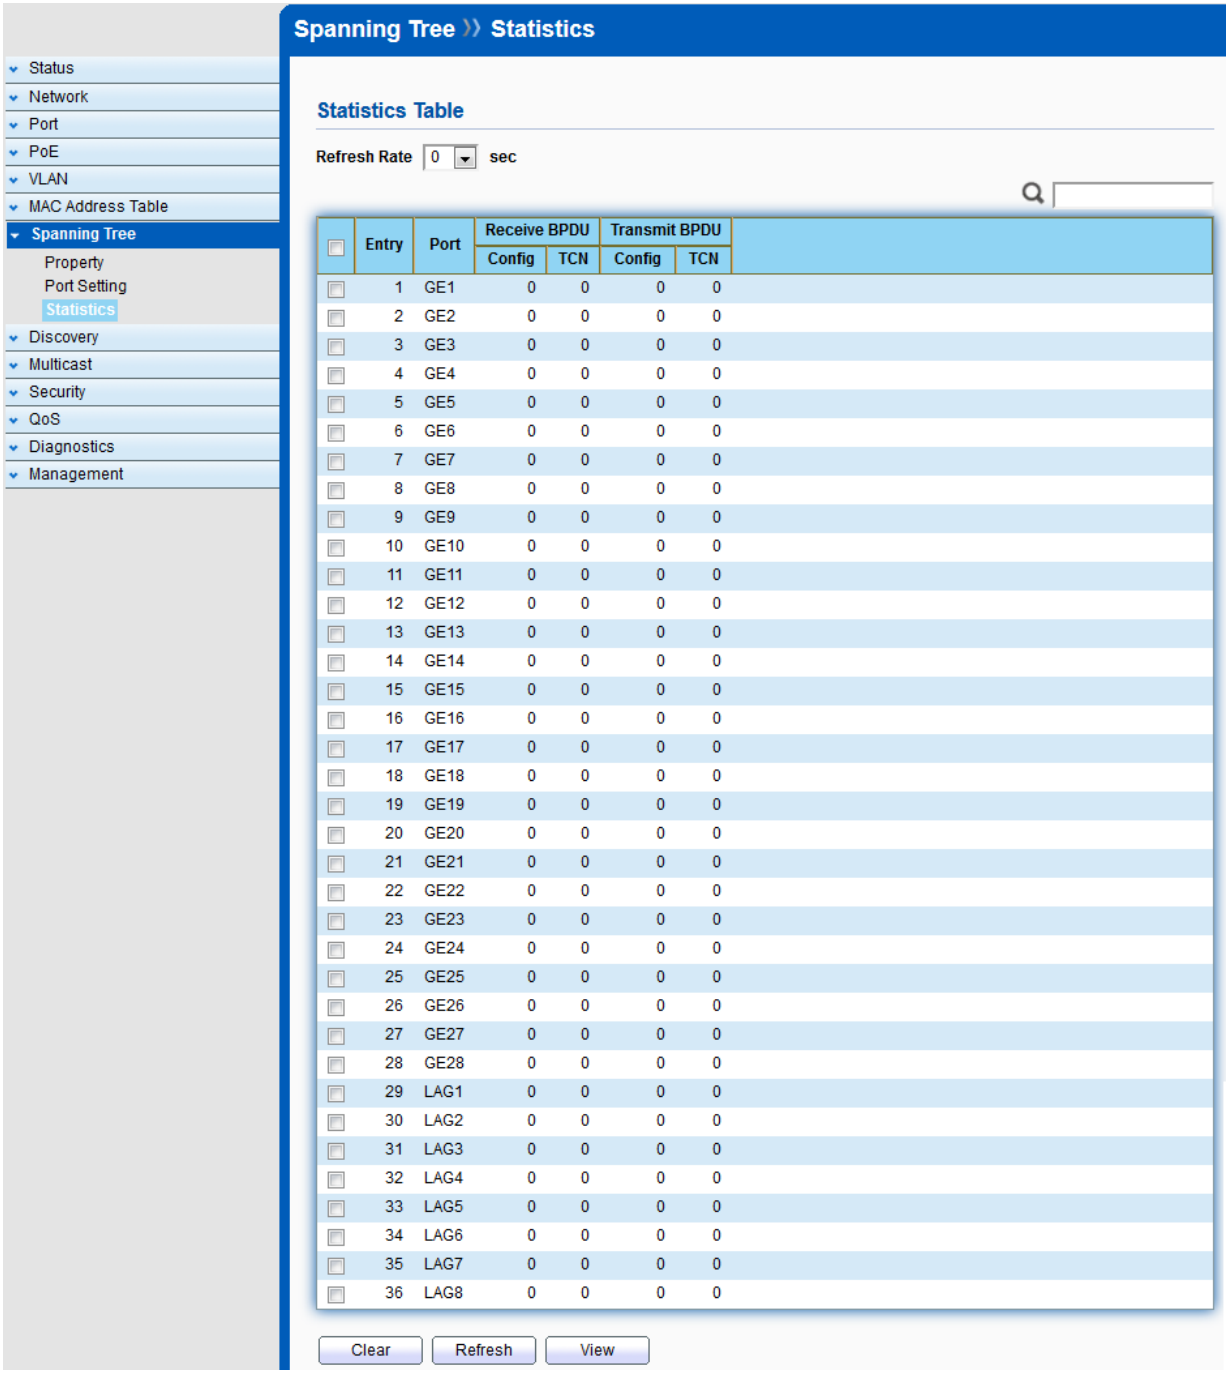
	Enable: Force to true state (as link to a host) **Disable**: Force to false state (as link to a bridge) In the edge mode, the interface would be put into the Forwarding state immediately upon link up. If the edge mode is enabled for the interface and there are BPDUs received on the interface, the loop might be occurred in the short time before the STP state change.
Point-to-Point	Specify the Point-to-Point port configuration: **Auto**: The state is depended on the duplex setting of the port. **Enable**: Force to true state. **Disable**: Force to false state.

9.3 Statistics

Click **STP** > **Statistics**

To display STP statistics

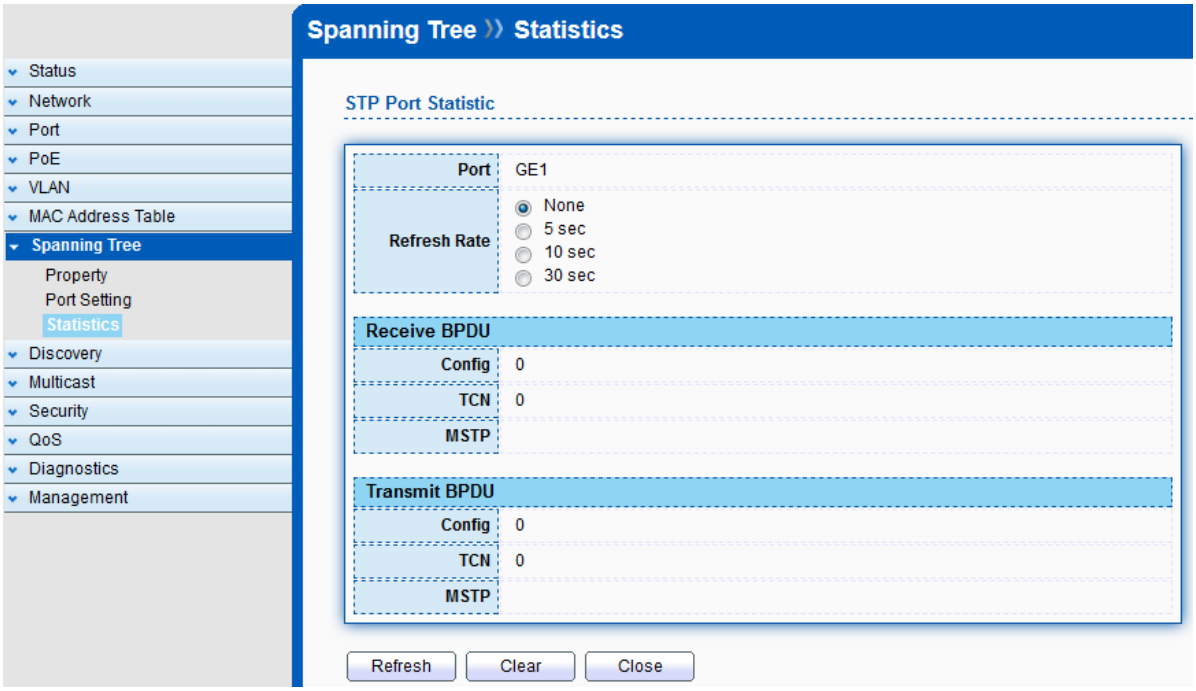
Bridge Protocol Data Units (BPDUs) are frames that contain information about the **Spanning tree protocol (STP)**. Switches send BPDUs using a unique MAC address from its origin port and a multicast address as destination MAC (01:80:C2:00:00:00, or 01:00:0C:CC:CC:CD for Per VLAN Spanning Tree). For STP algorithms to function, the switches need to share information about themselves and their connections. What they share are bridge protocol data units (BPDUs). BPDUs are sent out as multicast frames to which only other layer 2 switches or bridges are listening. If any loops (multiple possible paths between switches) are found in the network topology, the switches will co-operate to disable a port or ports to ensure that there are no loops; that is, from one device to any other device in the layer 2 network, only one path can be taken.



Field	Description
Refresh Rate	The option to refresh the statistics automatically.
Receive BPDU (Config)	The counts of the received CONFIG BPDU.
Receive BPDU (TCN)	The counts of the received TCN BPDU.
Transmit BPDU (Config)	The counts of the transmitted CONFIG BPDU.
Transmit BPDU (TCN)	The counts of the transmitted TCN BPDU.

Field	Description
Clear	Clear the statistics for the selected interfaces.
View	View the statistics for the interface.

View STP Port Statistics.



Field	Description
Refresh Rate	The option to refresh the statistics automatically.
Clear	Clear the statistics for the selected interfaces.

Chapter 10 Discovery

10.1 LLDP

The **Link Layer Discovery Protocol (LLDP)** is a vendor-neutral link layer protocol in the Internet Protocol Suite used by network devices for advertising their identity, capabilities, and neighbors on an IEEE 802 local area network, principally wired Ethernet. The LLDP is a one-way protocol; there are no request/response sequences. Information is advertised by stations implementing the transmit function, and is received and processed by stations implementing the receive function. The LLDP category contains LLDP and LLDP-MED pages.

10.1.1 Property

Click **Discovery** > **LLDP** > **Property**

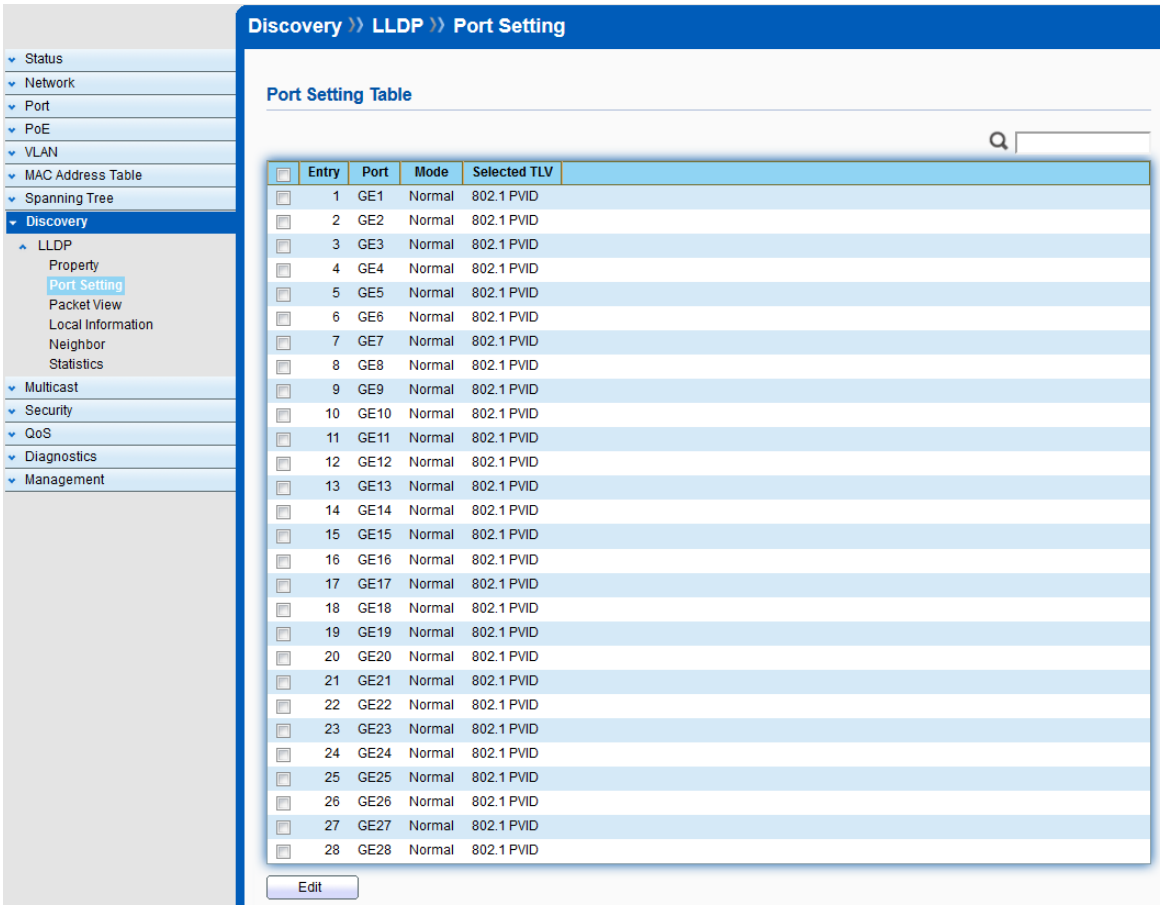
To display LLDP Property Setting web page.

Field	Description
State	Enable/Disable LLDP protocol on this switch
LLDP Handling	Select LLDP PDU handling action to be filtered, bridging or flooded when LLDP is globally disabled. **Filtering**: Deletes the packet. **Bridging**: (VLAN-aware flooding) Forwards the packet to all VLAN members. **Flooding**: Forwards the packet to all ports.
TLV Advertise Interval	Select the interval at which frames are transmitted. The default is 30 seconds, and the valid range is 5~32767 seconds.
Holdtime Multiplier	Select the multiplier on the transmit interval to assign to TTL (range 2~10, default=4).
Reinitialization Delay	Select the delay before a re-initialization (range 1~10 seconds, default=2).
Transmit Delay	Select the delay after an LLDP frame is sent (range 1~8191 seconds, default=3).

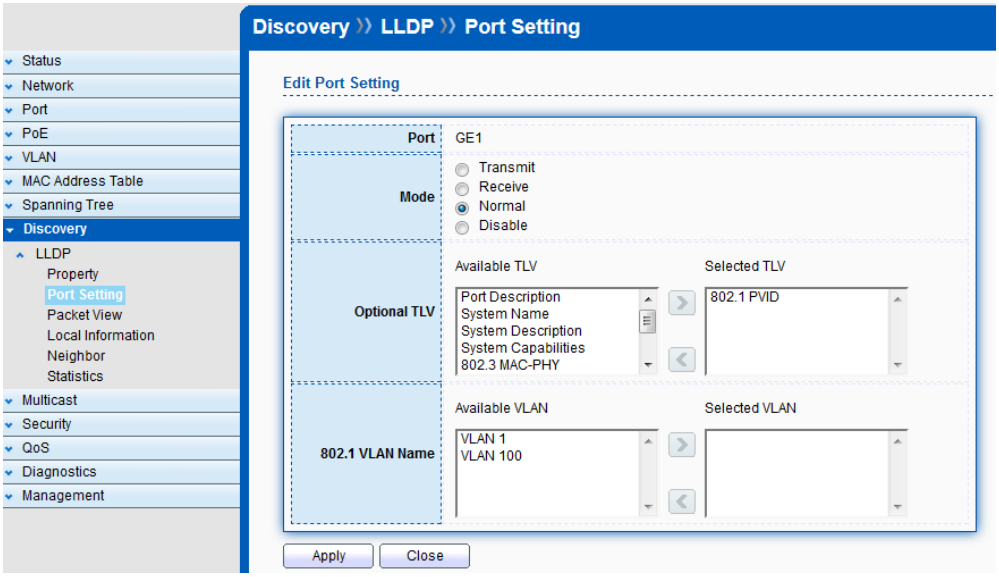
10.1.2 Port Setting

Click **Discovery** > **LLDP** > **Port Setting**

To display LLDP Port Setting.



To Edit LLDP port setting web page, select the port which to set, click button **Edit**.



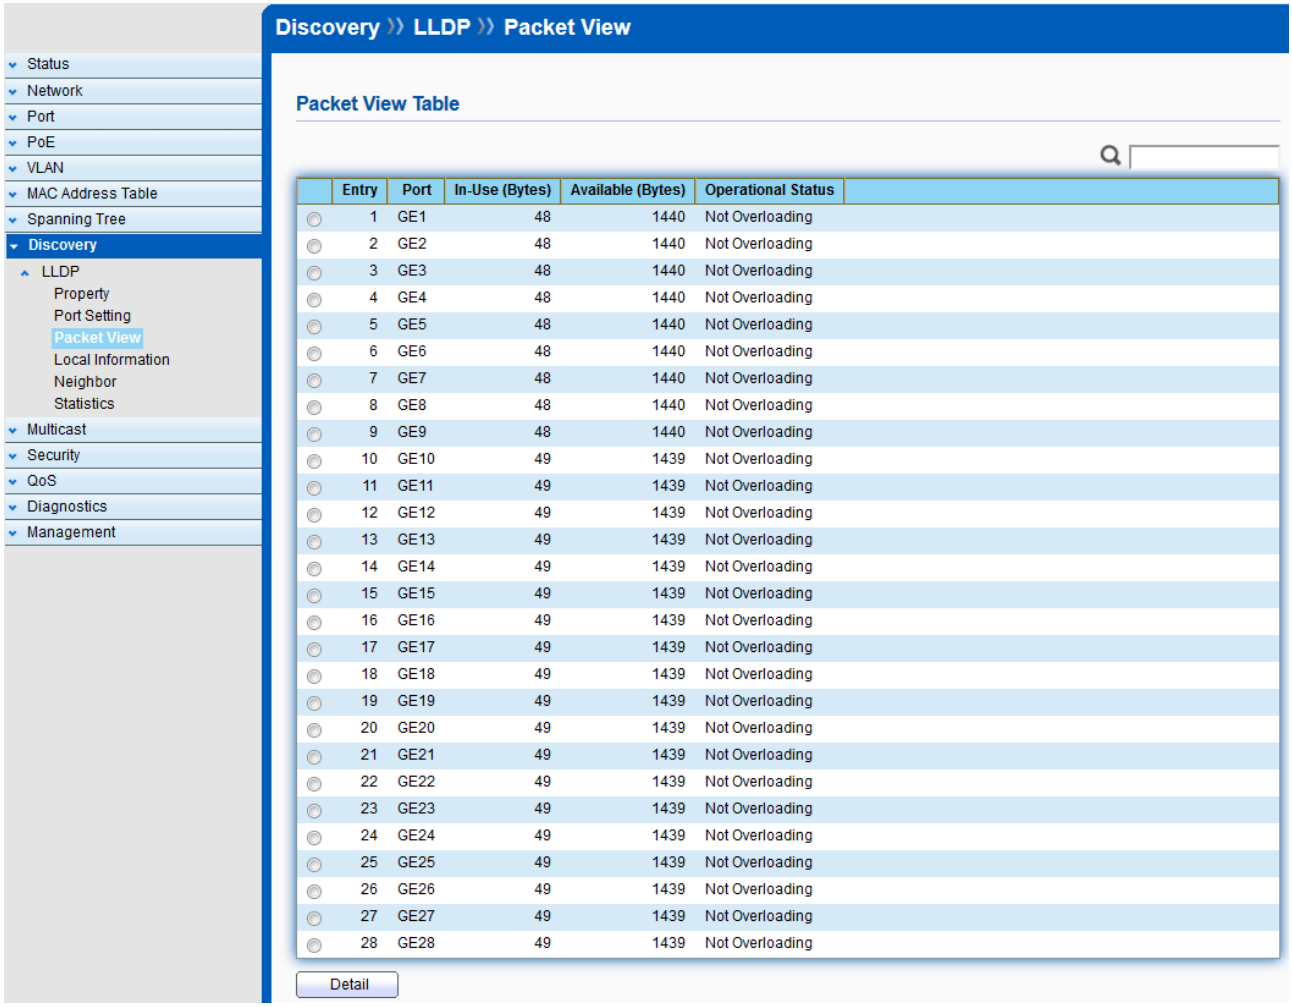
Field	Description
Port	Select specified port or all ports to configure LLDP state.

Mode	Select the transmission state of LLDP port interface. **Disable**: Disable the transmission of LLDP PDUs. **RX Only**: Receive LLDP PDUs only. **TX Only**: Transmit LLDP PDUs only. **Normal**: Transmit and receive LLDP PDUs both.
Optional TLV	Select the LLDP optional TLVs to be carried (multiple selection is allowed). System Name Port Description System Description System Capability 802.3 MAC-PHY 802.3 Link Aggregation 802.3 Maximum Frame Size Management Address 802.1 PVID
802.1 VLAN Name	Select the VLAN Name ID to be carried (multiple selection is allowed)

10.1.3 Packet View

Click **Discovery** > **LLDP** > **Packet View**

To display LLDP Overloading.



Field	Description
Port	Port Name
In-Use (Bytes)	Total number of bytes of LLDP information in each packet.
Available (Bytes)	Total number of available bytes left for additional LLDP information in each packet.
Operational Status	Overloading or not

If need detail information, select the port, then click **Detail**.

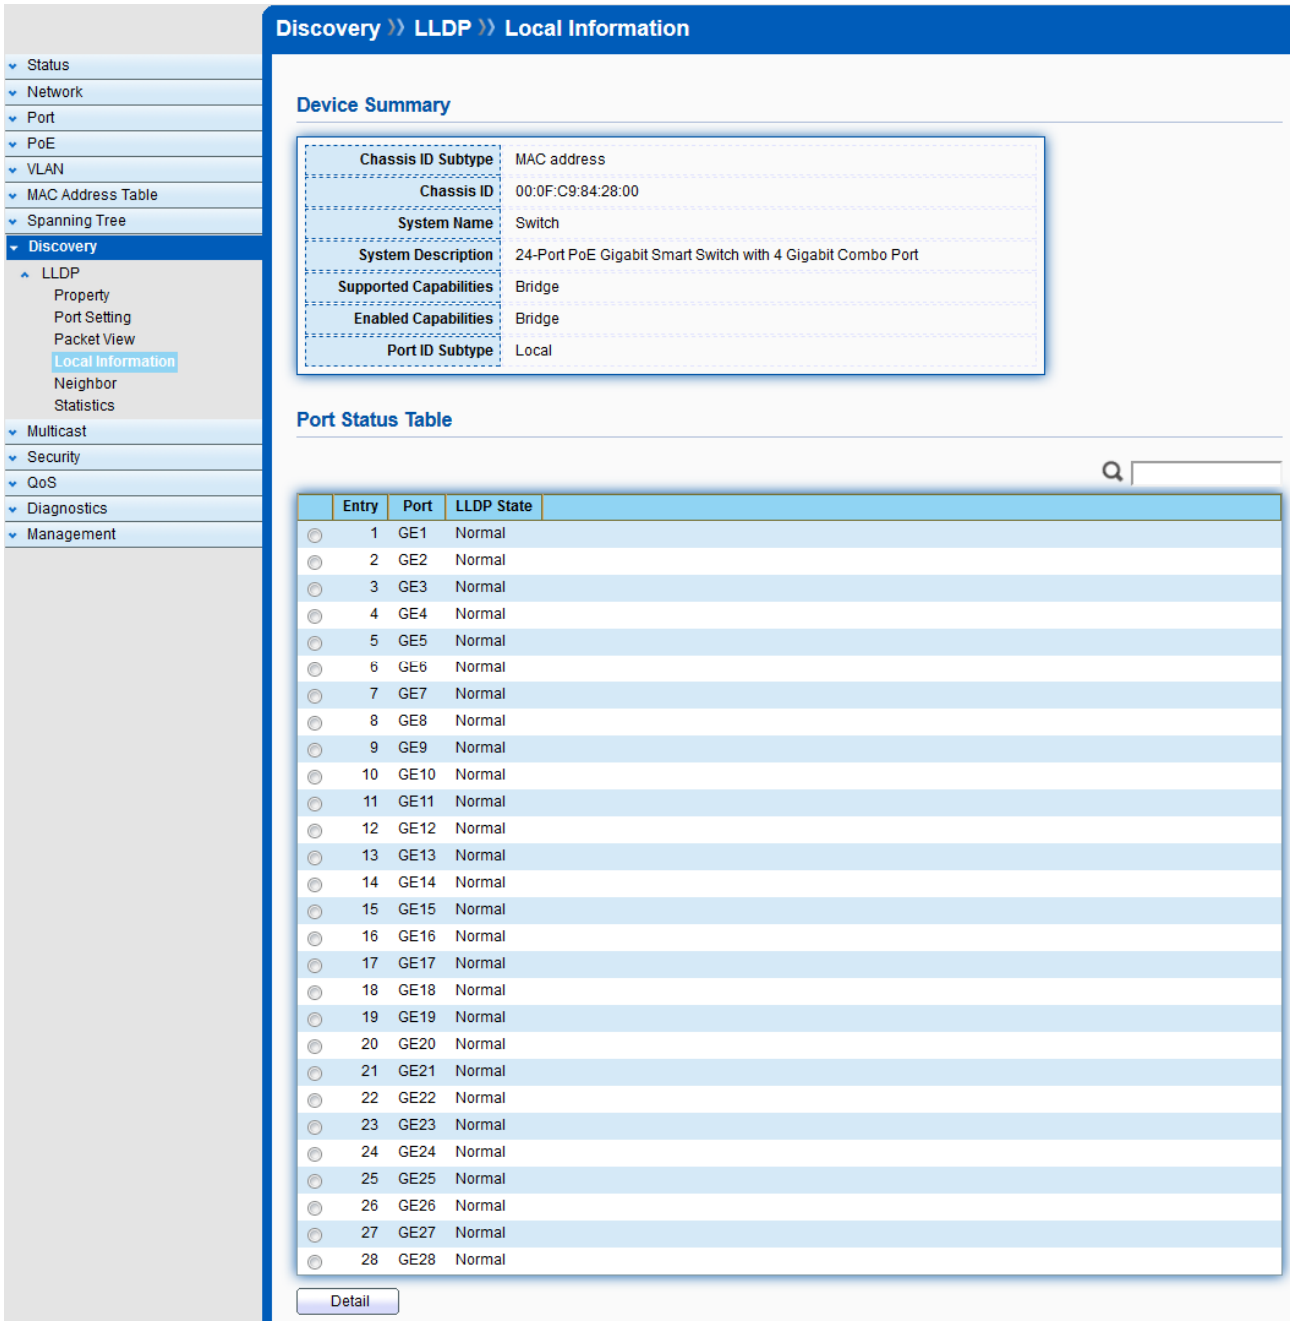
Field	Description
Port	Port Name
Mandatory TLVs	Total mandatory TLV byte size. Status is sent or overloading.
802.3 TLVs	Total 802.3 TLVs byte size. Status is sent or overloading.
Optional TLVs	Total Optional TLV byte size. Status is sent or overloading.
802.1 TLVs	Total 802.1 TLVs byte size. Status is sent or overloading.
Total	Total number of bytes of LLDP information in each packet.

10.1.4 Local Information

Click **Discovery** > **LLDP** > **Local Information**

To display LLDP Local Device.

Use the LLDP Local Information to view LLDP local device information.



Field	Description
Chassis ID Subtype	Type of chassis ID, such as the MAC address.
Chassis ID	Identifier of chassis. Where the chassis ID subtype is a MAC address, the MAC address of the switch is displayed.
System Name	Name of switch
System Description	Description of the switch.
Capabilities Supported	Primary functions of the device, such as Bridge, WLAN AP, or Router.
Capabilities Enabled	Primary enabled functions of the device.
Port ID Subtype	Type of the port identifier that is shown.
LLDP Status	LLDP Tx and Rx abilities.

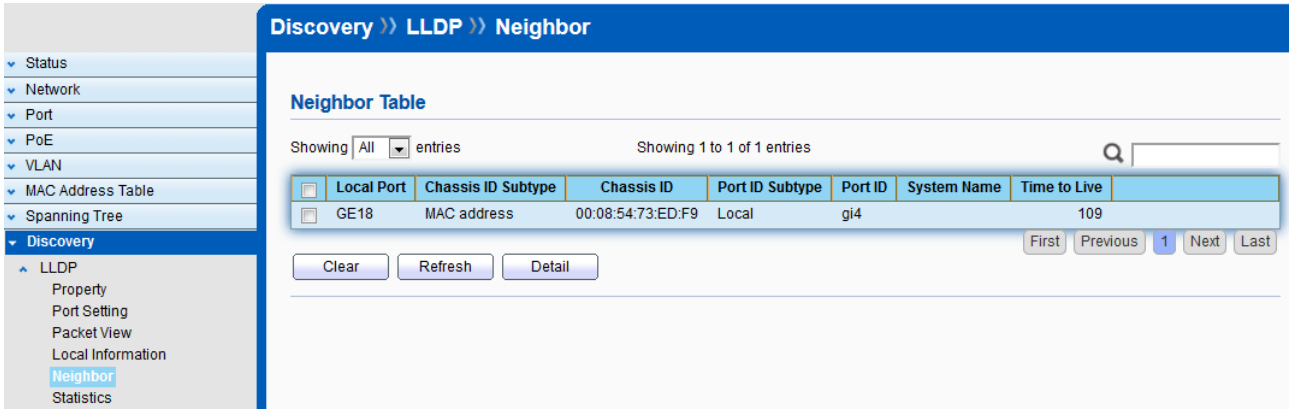
Click "**Detail**" button on the page to view detail information of the selected port.

10.1.5 Neighbor

Click **Discovery** > **LLDP** > **Neighbor**

To display LLDP Remote Device.

Use the LLDP Neighbor page to view LLDP neighbors information.



Field	Description
Local Port	Number of the local port to which the neighbor is connected.
Chassis ID Subtype	Type of chassis ID (for example, MAC address)
Chassis ID	Identifier of the 802 LAN neighboring device's chassis.
Port ID Subtype	Type of the port identifier that is shown.
Port ID	Identifier of port.
System Name	Published name of the switch.
Time to Live	Time interval in seconds after which the information for this neighbor is deleted.

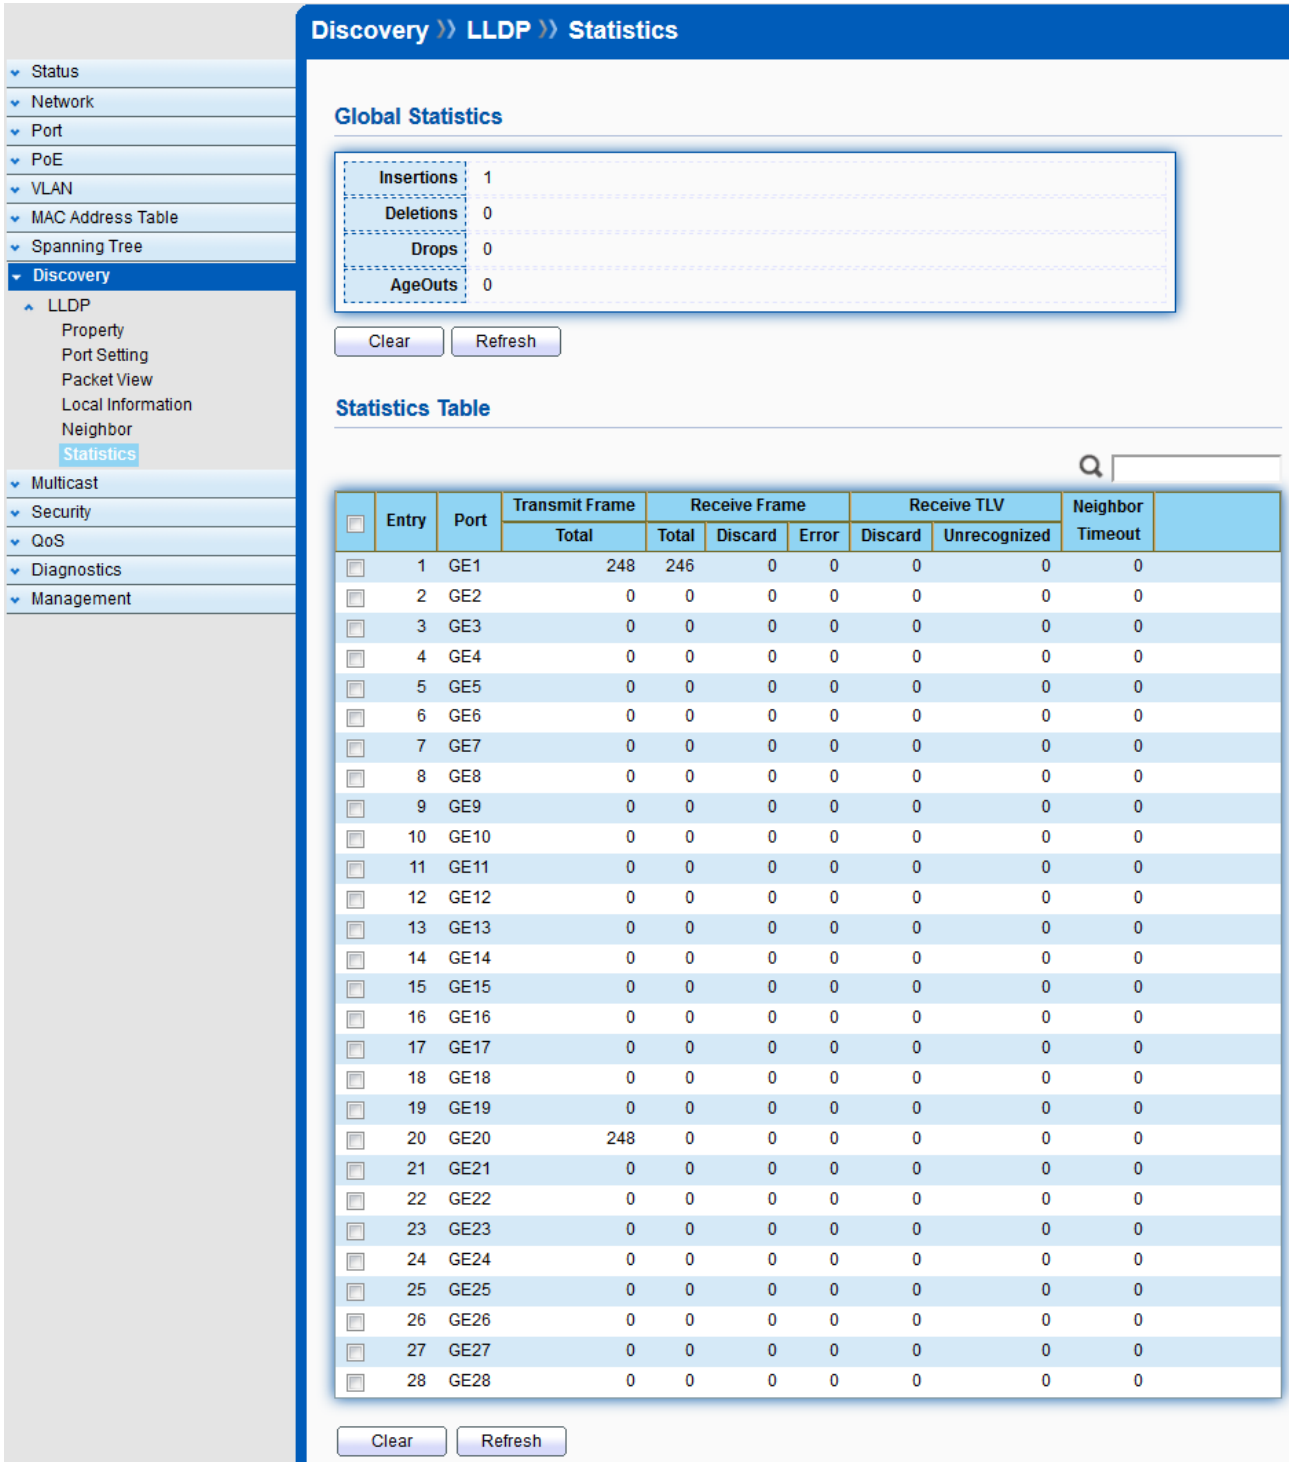
Click "**Detail**" to view selected neighbor detail information.

10.1.6 Statistics

Click **Discovery** > **LLDP** > **Statistics**

To display LLDP Statistics status.

The Link Layer Discovery Protocol (LLDP) Statistics page displays summary and per-port information for LLDP frames transmitted and received on the switch.



Entry	Port	Transmit Frame	Receive Frame			Receive TLV		Neighbor
		Total	Total	Discard	Error	Discard	Unrecognized	Timeout
1	GE1	248	246	0	0	0	0	0
2	GE2	0	0	0	0	0	0	0
3	GE3	0	0	0	0	0	0	0
4	GE4	0	0	0	0	0	0	0
5	GE5	0	0	0	0	0	0	0
6	GE6	0	0	0	0	0	0	0
7	GE7	0	0	0	0	0	0	0
8	GE8	0	0	0	0	0	0	0
9	GE9	0	0	0	0	0	0	0
10	GE10	0	0	0	0	0	0	0
11	GE11	0	0	0	0	0	0	0
12	GE12	0	0	0	0	0	0	0
13	GE13	0	0	0	0	0	0	0
14	GE14	0	0	0	0	0	0	0
15	GE15	0	0	0	0	0	0	0
16	GE16	0	0	0	0	0	0	0
17	GE17	0	0	0	0	0	0	0
18	GE18	0	0	0	0	0	0	0
19	GE19	0	0	0	0	0	0	0
20	GE20	248	0	0	0	0	0	0
21	GE21	0	0	0	0	0	0	0
22	GE22	0	0	0	0	0	0	0
23	GE23	0	0	0	0	0	0	0
24	GE24	0	0	0	0	0	0	0
25	GE25	0	0	0	0	0	0	0
26	GE26	0	0	0	0	0	0	0
27	GE27	0	0	0	0	0	0	0
28	GE28	0	0	0	0	0	0	0

Field	Description
Insertions	The number of times the complete set of information advertised by a particular MAC Service Access Point (MSAP) has been inserted into tables associated with the remote systems.
Deletions	The number of times the complete set of information advertised by MSAP has been deleted from tables associated with the remote systems.
Drops	The number of times the complete set of information advertised by MSAP could not be entered into tables associated with the remote systems because of insufficient resources.
Age Outs	The number of times the complete set of information advertised by

	MSAP has been deleted from tables associated with the remote system because the information timeliness interval has expired.
Port	Interface or port number.
Transmit Frame Total	Number of LLDP frames transmitted on the corresponding port.
Receive Frame Total	Number of LLDP frames received by this LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive Frame Discard	Number of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive Frame Error	Number of invalid LLDP frames received by the LLDP agent on the corresponding port, while the LLDP agent is enabled.
Receive TLV Discard	Number of TLVs of LLDP frames discarded for any reason by the LLDP agent on the corresponding port.
Receive TLV Unrecognized	Number of TLVs of LLDP frames that are unrecognized while the LLDP agent is enabled.
Neighbor Timeout	Number of age out LLDP frames.

Chapter 11 Multicast

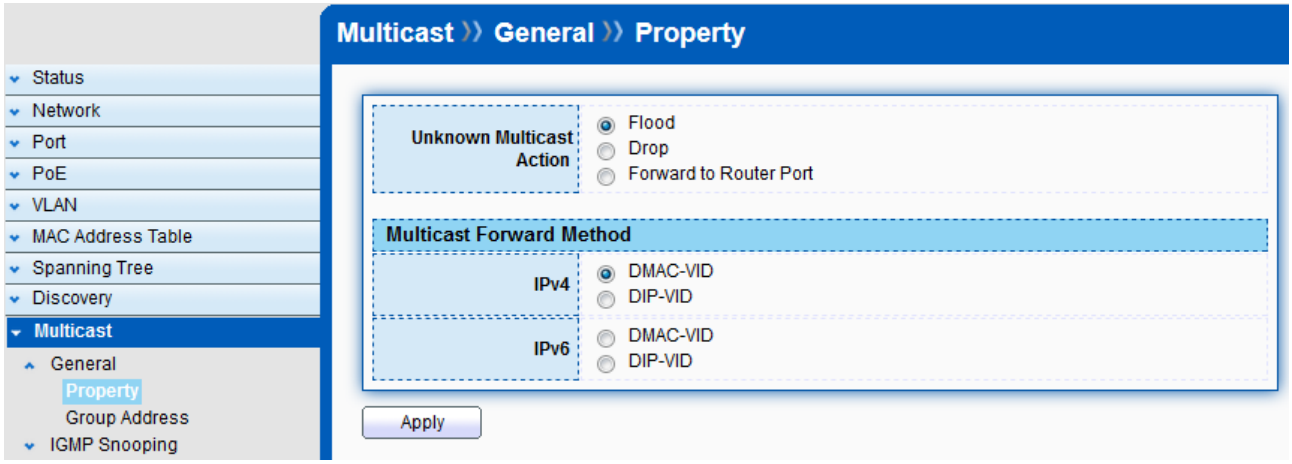
11.1 General

Use the General pages to configure setting of IGMP snooping property and group and router setting function.

11.1.1 Property

Click **Multicast** > **General** > **Property**

This page allow user to set multicast forwarding method and unknown multicast action.



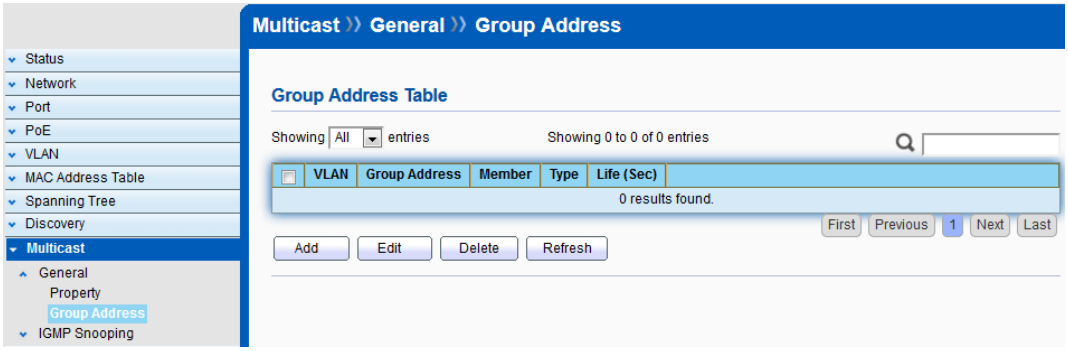
Field	Description
Unknown Multicast Action	Set the unknown multicast action **Drop**: drop the unknown multicast data. **Flood**: flood the unknown multicast data. **Router port**: forward the unknown multicast data to router port.
IPv4 / IPv6	Set the IPv4/IPv6 multicast forward method. **MAC-VID**: forward method dmac+vid. **DIP-VID**: forward method dip+vid.

11.1.2 Group Address

Click **Multicast** > **General** > **Group Address**

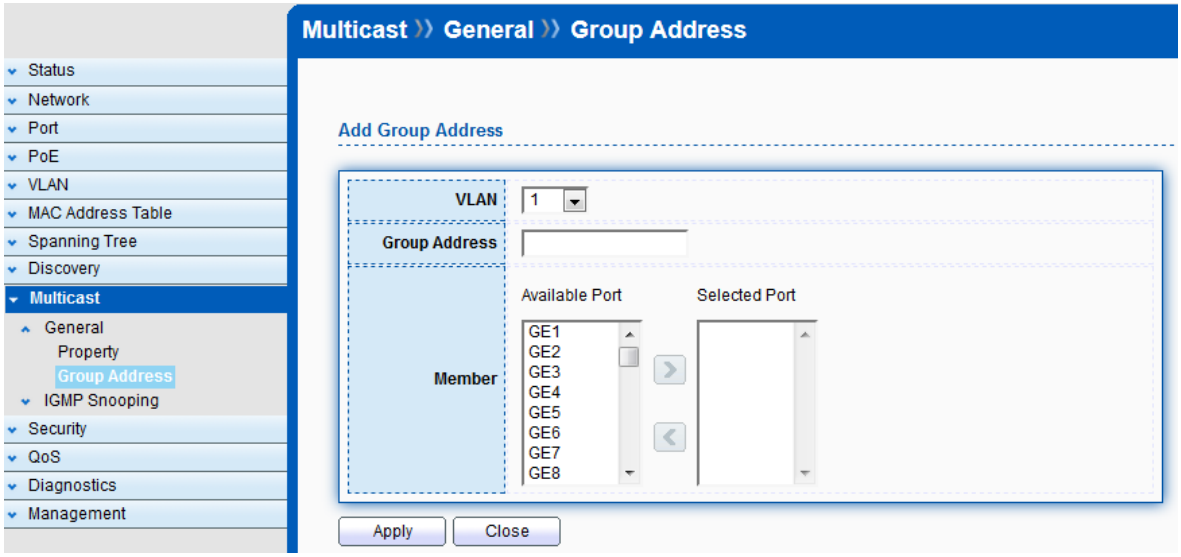
To display Multicast General Group web page.

This page allow user to browse all multicast groups that dynamic learned or statically added.



Field	Description
VLAN	The VLAN ID of group.
Group Address	The group IP address.
Member	The member ports of group.
Type	The type of group. Static or Dynamic.
Life(Sec)	The life time of this dynamic group.

Click "**Add/Edit**" to add/edit Group Address.



Field	Description
VLAN	The VLAN ID of group.
Group Address	The group IP address.
Member	The member ports of group. **Available Port**: Optional port member **Selected Port**: Selected port member

11.2 IGMP Snooping

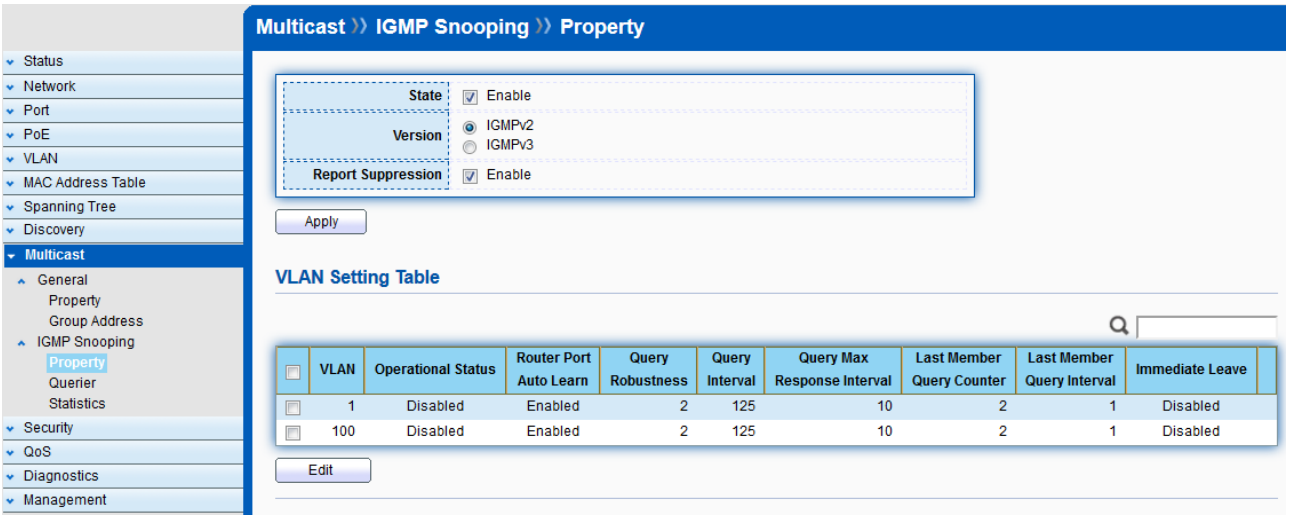
Use the IGMP Snooping pages to configure setting of IGMP snooping function

11.2.1 Property

Click **Multicast** > **IGMP Snooping** > **Property**

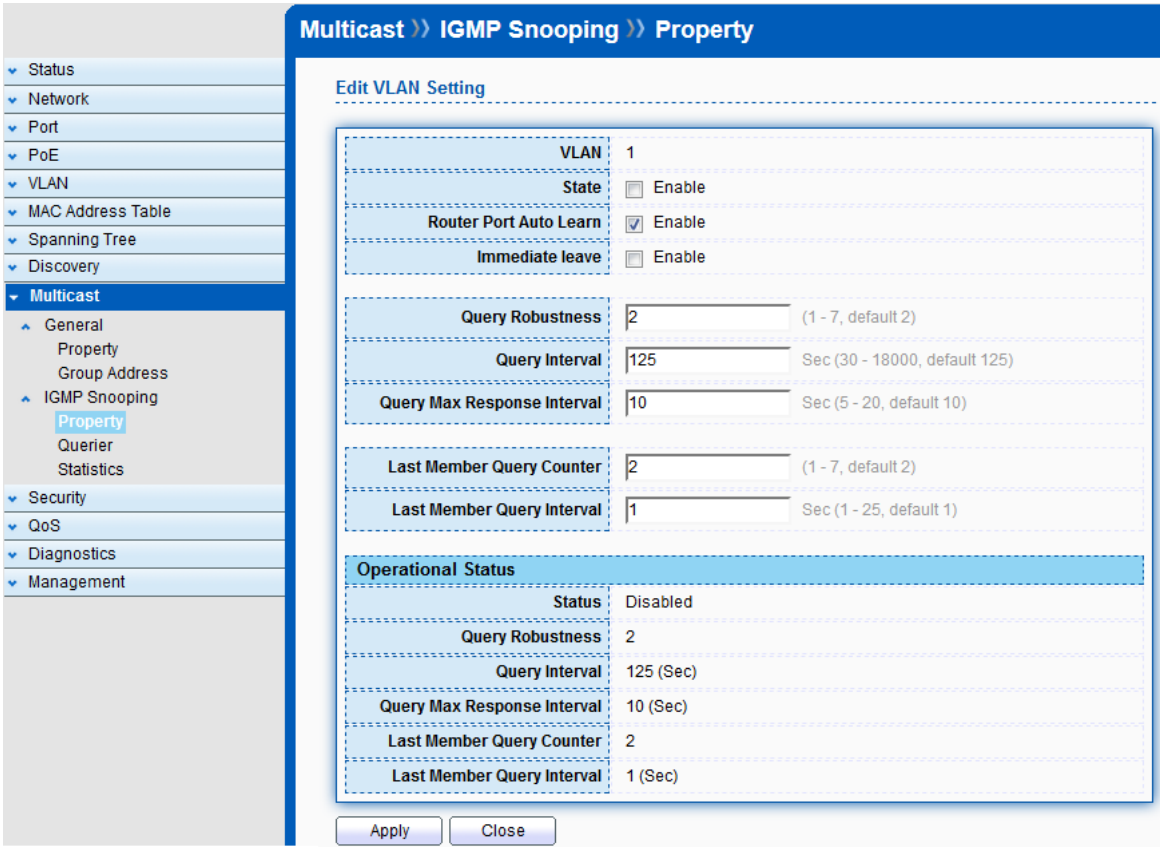
To display IGMP Snooping global setting and VLAN setting web page.

This page allow user to configure global settings of IGMP snooping and configure specific VLAN settings of IGMP Snooping.



Field	Description
State	Set the enabling status of IGMP Snooping functionality **Enable**: If Checked Enable IGMP Snooping, else is Disabled IGMP Snooping.
Version	Set the IGMP Snooping version **IGMPv2**: Only support process IGMP v2 packet. **IGMPv3**: Support v3 basic and v2.
Report Suppression	Set the enabling status of IGMP v2 report suppression. **Enable**: If Checked Enable IGMP Snooping v2 report suppression, else Disable the report suppression function.
VLAN	The IGMP entry VLAN ID.
Operation Status	The enable status of IGMP Snooping VLAN functionality.
Router Port Auto Learn	The enabling status of IGMP Snooping router port auto learning
Query Robustness	The Query Robustness allows tuning for the expected packet lose on a subnet.
Query Interval	The interval of query to send general query.
Query Max Response Interval	In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member Query count	The count that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.
Immediate Leave	The immediate leave status of the group will immediate leave when receive IGMP Leave message.

Click "**Edit**" to edit VLAN Setting.



Field	Description
VLAN	The selected VLAN List
State	Set the enabling status of IGMP Snooping VLAN functionality **Enable**: If Checked Enable IGMP Snooping router VLAN, else is Disabled IGMP Snooping VLAN.
Router Port Auto Learn	Set the enabling status of IGMP Snooping router port learning. **Enable**: If Checked Enable learning router port by query and PIM, DVRMP, else Disable the learning router port.
Immediate Leave	Immediate Leave the group when receive IGMP Leave message. **Enable**: If Checked Enable immediate leave, else Disable immediate leave.
Query Robustness	The Admin Query Robustness allows tuning for the expected packet loss on a subnet.
Query Interval	The Admin interval of querier to send general query.
Query Max Response Interval	The Admin query max response interval, In Membership Query Messages, it specifies the maximum allowed time before sending a responding report in units of 1/10 second.
Last Member	The Admin last member query count that Querier-switch sends
Query Counter	Group-Specific Queries when it receives a Leave Group message for a group.
Last Member Query Interval	The Admin last member query interval that Querier-switch sends Group-Specific Queries when it receives a Leave Group message for a group.

Operational Status.

Field	Description
Status	Operational IGMP Snooping status, must both IGMP Snooping global and IGMP Snooping enable the status will be enable.

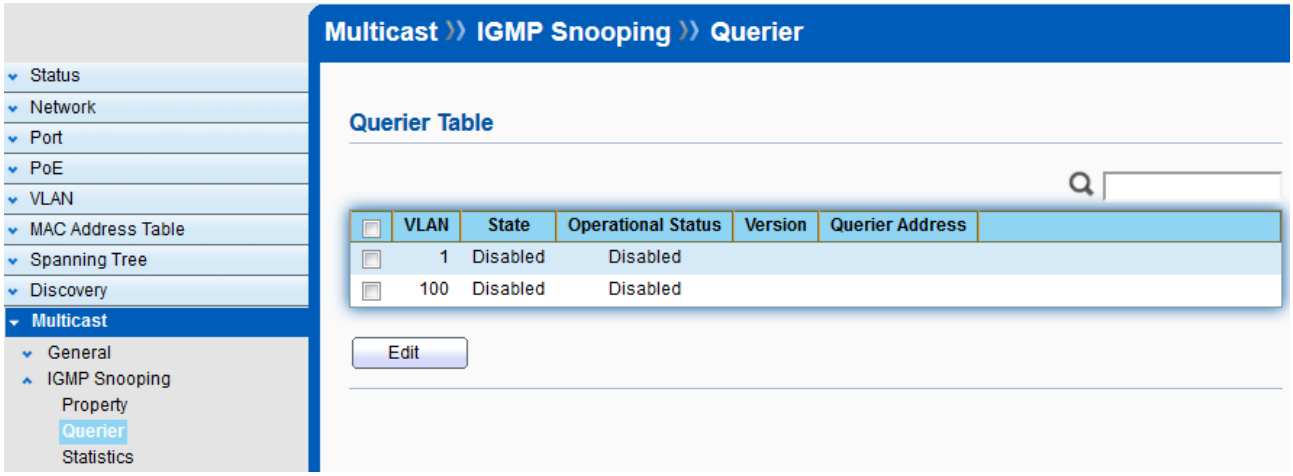
Query Robustness	Operational Query Robustness.
Query Interval	Operational Query Interval.
Query Max Response Interval	Operational Query Max Response Interval.
Last Member Query Counter	Operational Last Member Query Count.
Last Member Query Interval	Operational Last Member Query Interval.

11.2.2 Querier

Click **Multicast** > **IGMP Snooping** > **Querier**

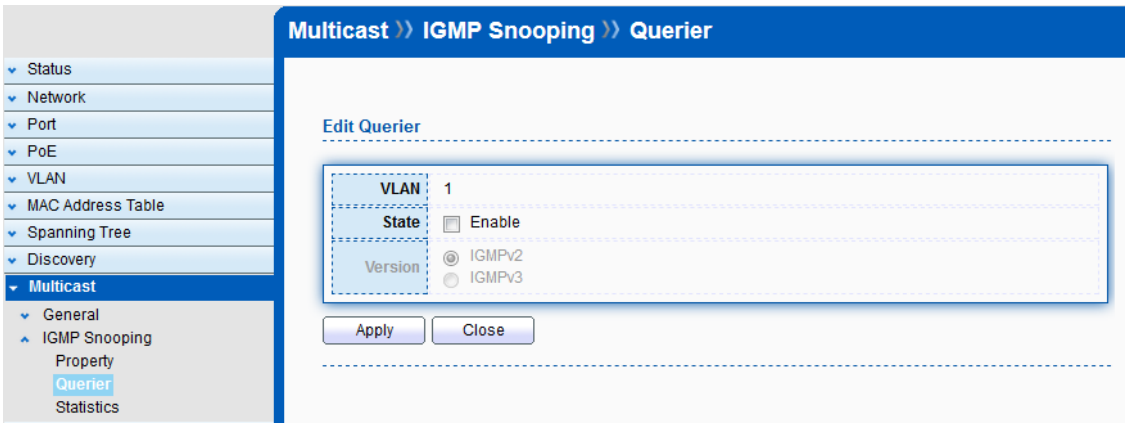
To display IGMP Snooping Querier setting web page.

This page allow user to configure querier setting on specific VLAN of IGMP Snooping.



Field	Description
VLAN	IGMP Snooping querier entry VLAN ID.
State	The IGMP Snooping querier Admin State.
Operational Status	The IGMP Snooping querier operational status.
Querier Version	The IGMP Snooping querier operational version.
Querier IP	The operational querier IP address on the VLAN.

Click "**Edit**" to edit IGMP Snooping Querier.



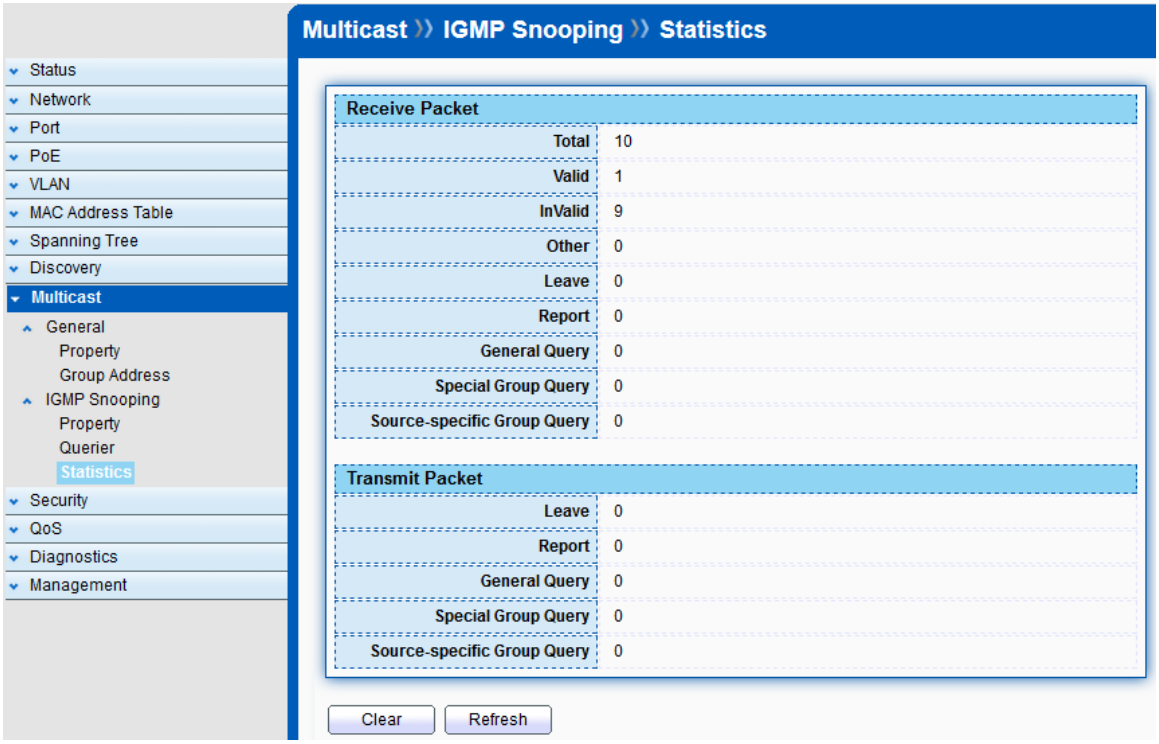
Field	Description

VLAN	The selected Edit IGMP Snooping querier VLAN list.
State	Set the enabling status of IGMP Querier Election on the chose VLANs. **Enabled**: If checked Enable IGMP Querier, else Disable IGMP Querier.
Version	Set the query version of IGMP Querier Election on the chose VLANs. **IGMPv2**: Querier version 2 **IGMPv3**: Querier version 3. (IGMP Snooping version should be IGMPv3)

11.2.3 Statistics

Click **Multicast** > **IGMP Snooping** > **Statistics**

This page allow user to display IGMP Snooping Statistics and clear IGMP Snooping statistics.



Receive Packet

Field	Description
Total	Total RX IGMP packet, include IPv4 multicast data to CPU.
Valid	The valid IGMP Snooping process packet.
InValid	The invalid IGMP Snooping process packet.
Other	The ICMP protocol is not 2, and is not IPv4 multicast data packet.
Leave	IGMP leave packet.
Report	IGMP join and report packet.
General Query	IGMP general query packet
Special Group Query	IGMP special group general query packet
Source-specific Group Query	IGMP special source and group general query packet

Transmit Packet

Field	Description
Leave	IGMP leave packet
Report	IGMP join and report packet
General Query	IGMP general query packet includes querier transmit general query packet.
Special Group Query	IGMP special group query packet include querier transmit special group query packet.
Source-specific Group Query	IGMP special source and group general query packet.

Chapter 12 Security

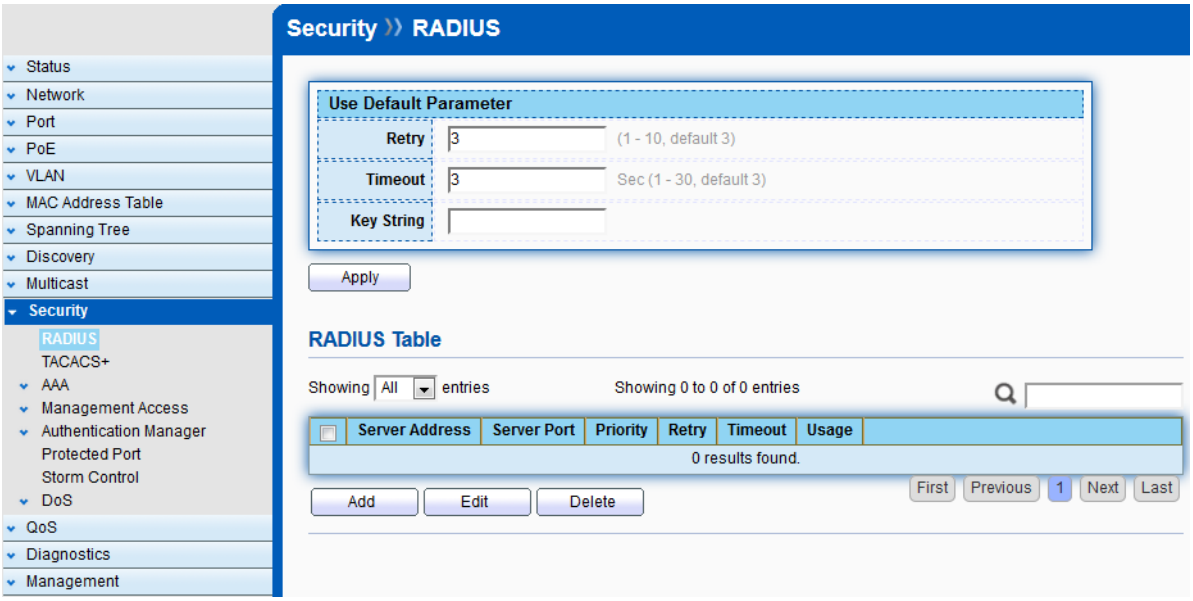
Use the security pages to configure setting for the switch security features.

12.1 RADIUS

Click **Security** > **RADIUS**

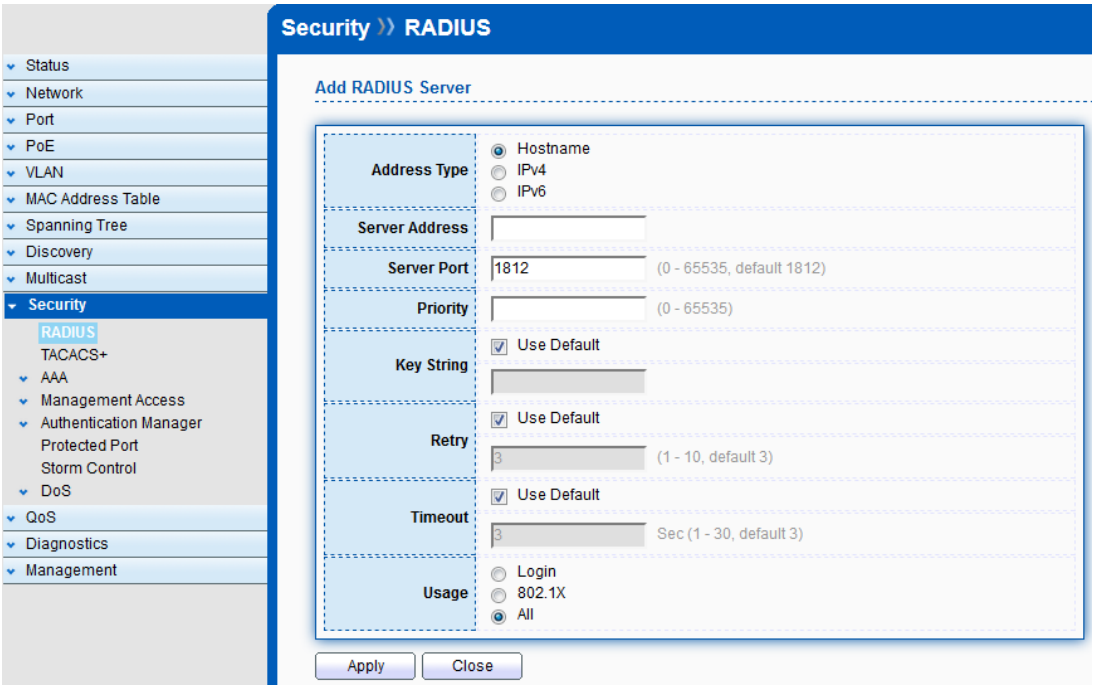
Remote Authentication Dial-In User Service (**RADIUS**) is a networking protocol that provides centralized Authentication, Authorization, and Accounting (AAA) management for users who connect and use a network service.

This page allows user to set up RADIUS server.



Field	Description
Retry	Enter the number of transmitted requests sent to the Radius server before a failure occurs. The default is 3.
Timeout	Enter the amount of time the device waits for an answer from the Radius Server before switching to the next server. The default value is 3.
Key String	Enter the Key String used for encrypting all Radius communication between the device and the Radius server.

Click "**Add**" or "**Edit**" to add or edit RADIUS server.



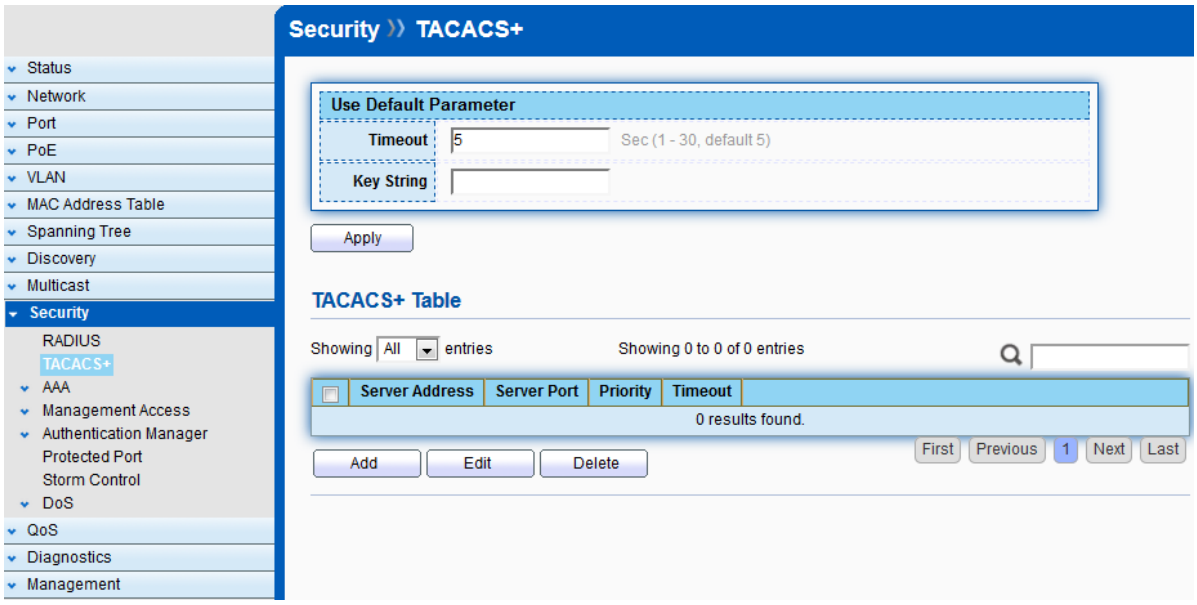
Field	Description
Address Type	Specify the address type to “Hostname”, “IPv4”, or “IPv6”.
Server Address	Specify the Hostname/IPv6/IPv4 address for the RADIUS server.
Server Port	Enter the server port number. The default port is 1812.
Key String	Enter the Key String used for encrypting all Radius communication between the device and the Radius server.
Retry	Enter the number of transmitted requests sent to the Radius server before a failure occurs. The default is 3.
Timeout	Enter the amount of time the device waits for an answer from the Radius Server before switching to the next server. The default value is 3.
Usage	Select the usage: Login, 802.1X, All.

12.2 TACACS+

Click **Security** > **TACACS+**

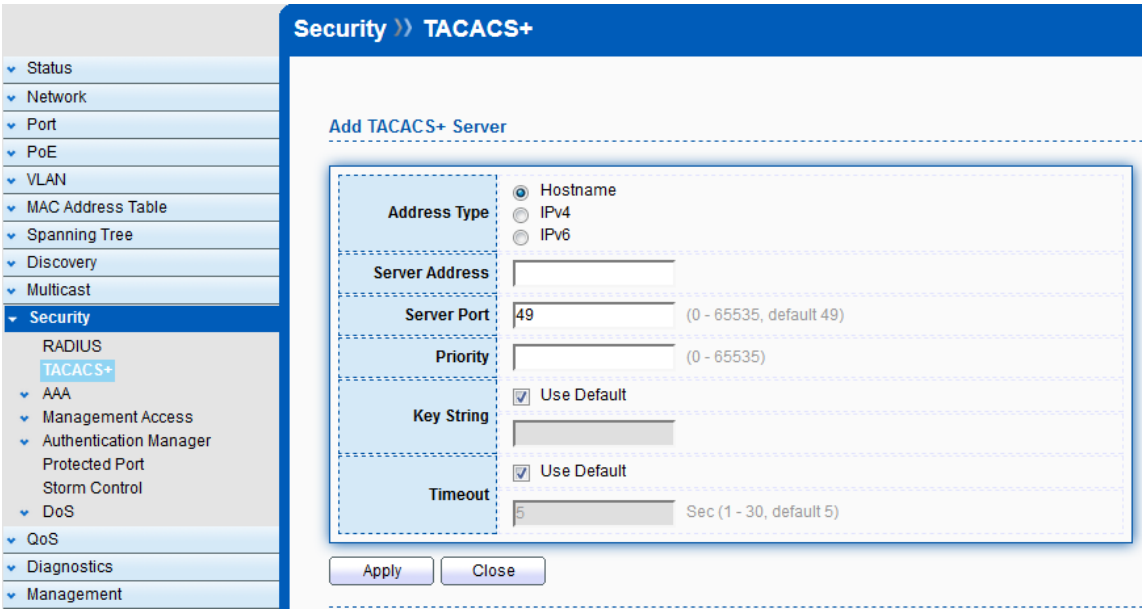
Terminal Access Controller Access-Control System Plus (**TACACS+**) is a protocol developed by Cisco. TACACS+ handles authentication, authorization, and accounting (AAA) services.

This page allows user to set up TACACS+ server.



Field	Description
Timeout	Enter the amount of time the device waits for an answer from the TACACS+ Server before switching to the next server. The default value is 3.
Key String	Enter the Key String used for encrypting all TACACS+ communication between the device and the TACACS+ server.

Click "**Add**" or "**Edit**" to add or edit TACACS+ server.



Field	Description
Address Type	Specify the address type to "Hostname", "IPv4", or "IPv6".
Server Address	Specify the Hostname/IPv6/IPv4 address for the TACACS+ server.
Server Port	Enter the server port number. The default port is 49.
Key String	Enter the Key String used for encrypting all TACACS+ communication between the device and the TACACS+ server.
Timeout	Enter the amount of time the device waits for an answer from the TACACS+ Server before switching to the next server. The default

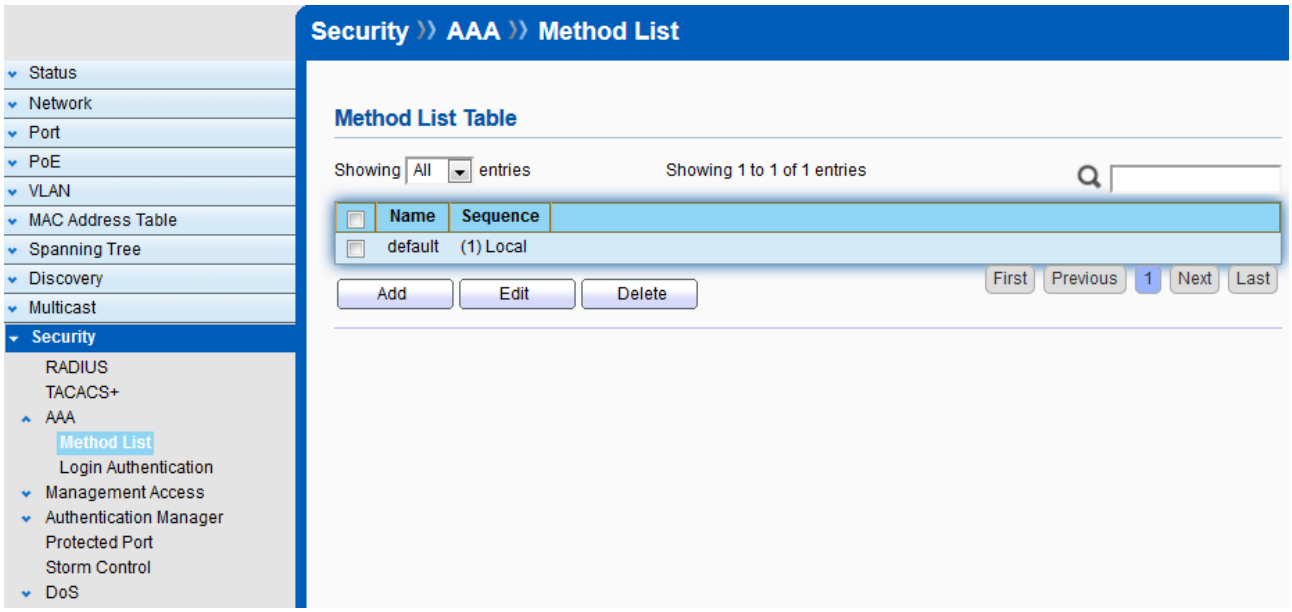
	value is 5.

12.3 AAA

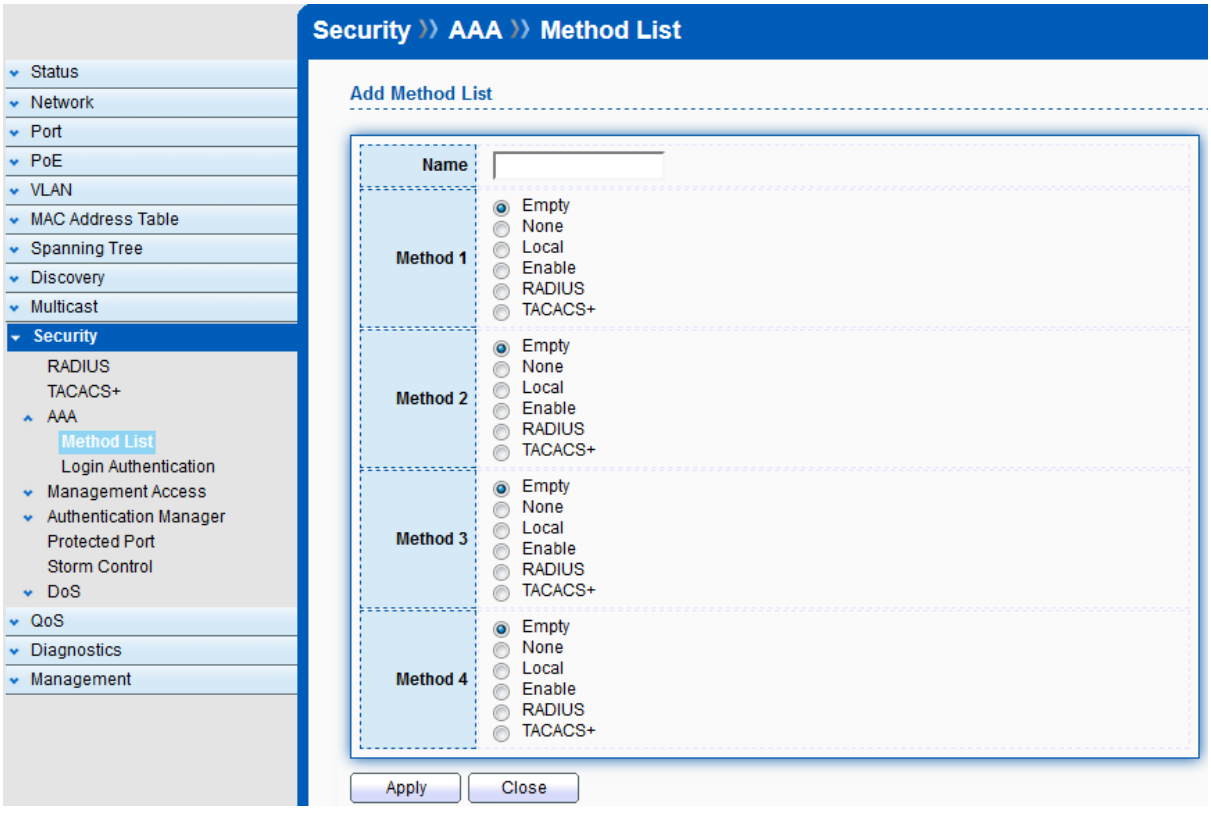
12.3.1 Method List

Click **Security** >**AAA** > **Method List**

This page allows user to change Method List.



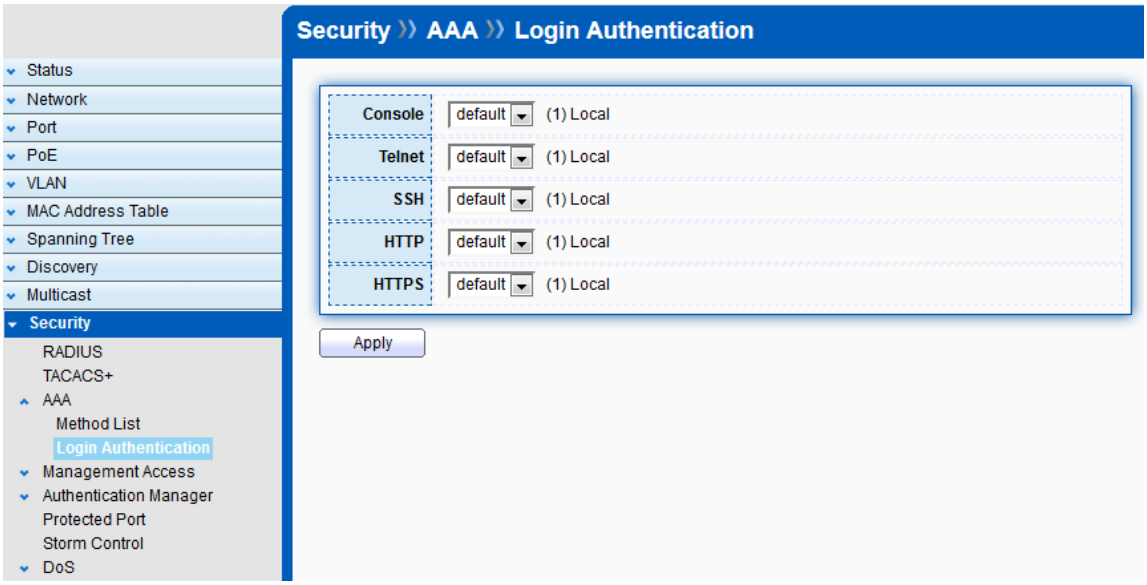
Click "**Add**" or "**Edit**" to add or edit Method List.



12.3.2 Login Authentication

Click **Security** >**AAA** > **Login Authentication**

This page allows user to change Login Authentication. User can change the login authentication method for “Console”, “Telnet”, “SSH”, “HTTP” and “HTTPS”.



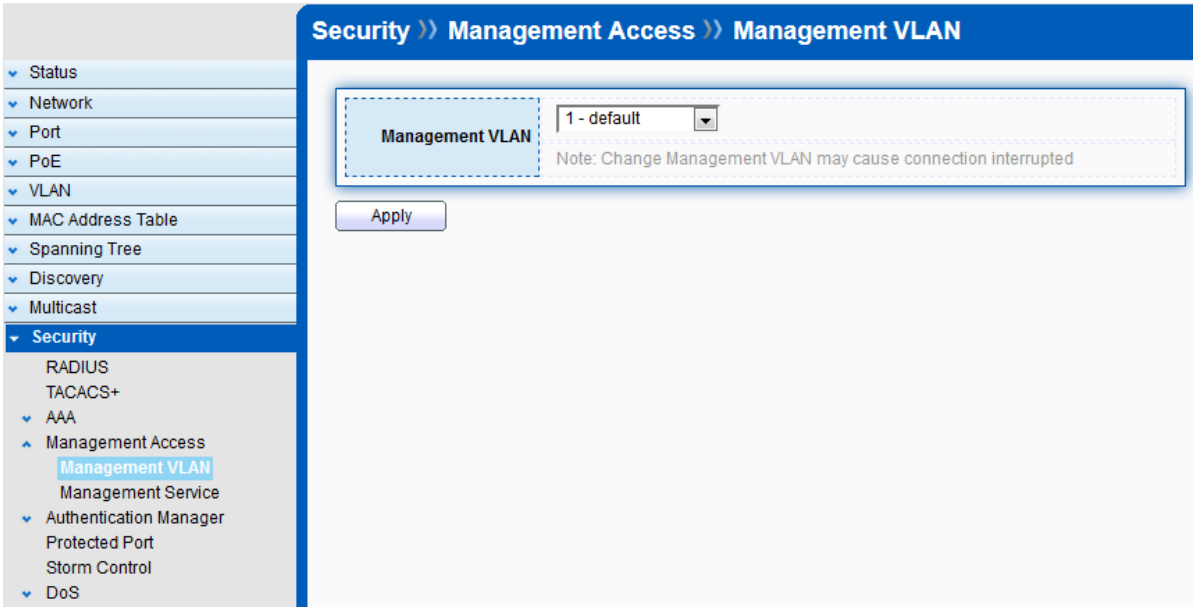
12.4 Management Access

Use the Management Access pages to configure setting of management access.

12.4.1 Management VLAN

Click **Security** > **Management Access** > **Management VLAN**

This page allow user to change Management VLAN connection.

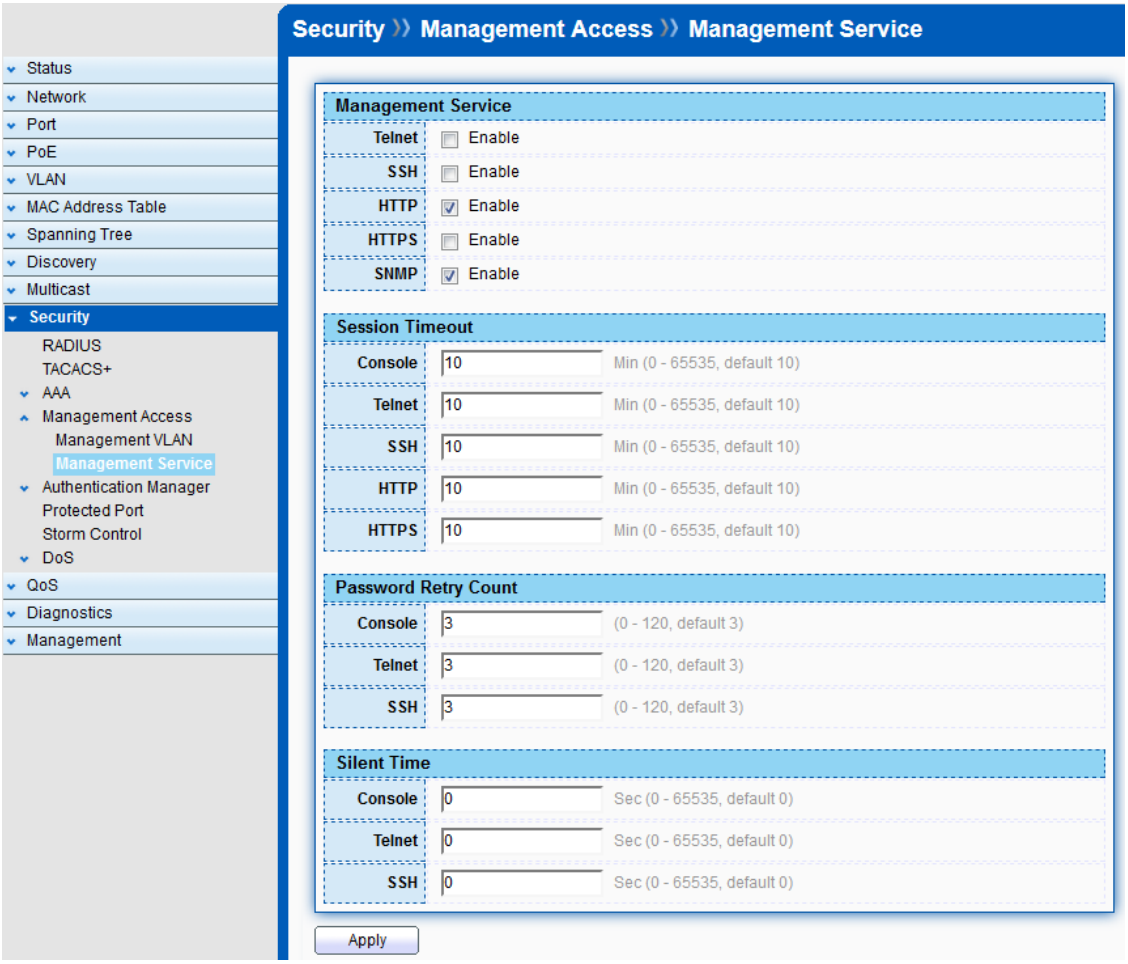


Field	Description
Management VLAN	Select management VLAN in option list. Management connection, such as http, https, SNMP etc, has the same VLAN of management VLAN are allow connecting to device. Others will be dropped.

12.4.2 Management Service

Click **Security** > **Management Access** > **Management Service**

This page allow user to change management services related configurations.



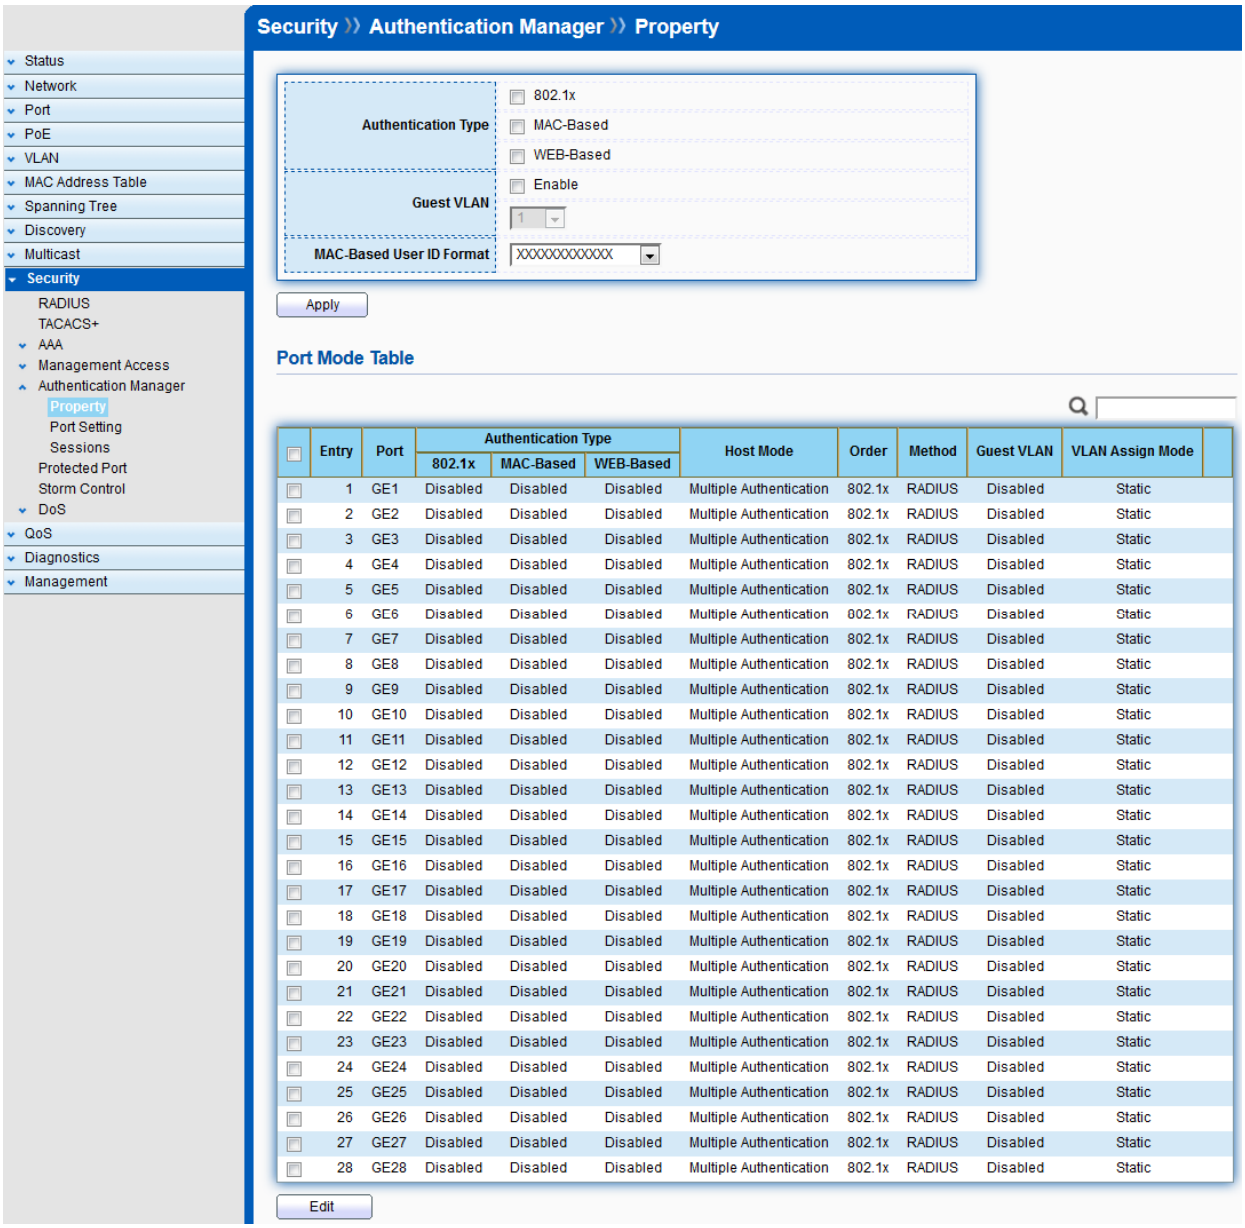
Field	Description
Management Service	Management Service admin state. **Telnet**: Connect CLI through Telnet. **HTTP**: Connect Web UI through HTTP. **HTTPS**: Connect Web UI through HTTPS. **SNMP**: Manage switch through SNMP.
Session Timeout	Set session timeout minutes for user access to user interface. 0 minute means never timeout.
Password Retry Count	Set password retry count for user access to user interface.
Silent Time	Set silent time for user access to user interface.

12.5 Authentication Manager

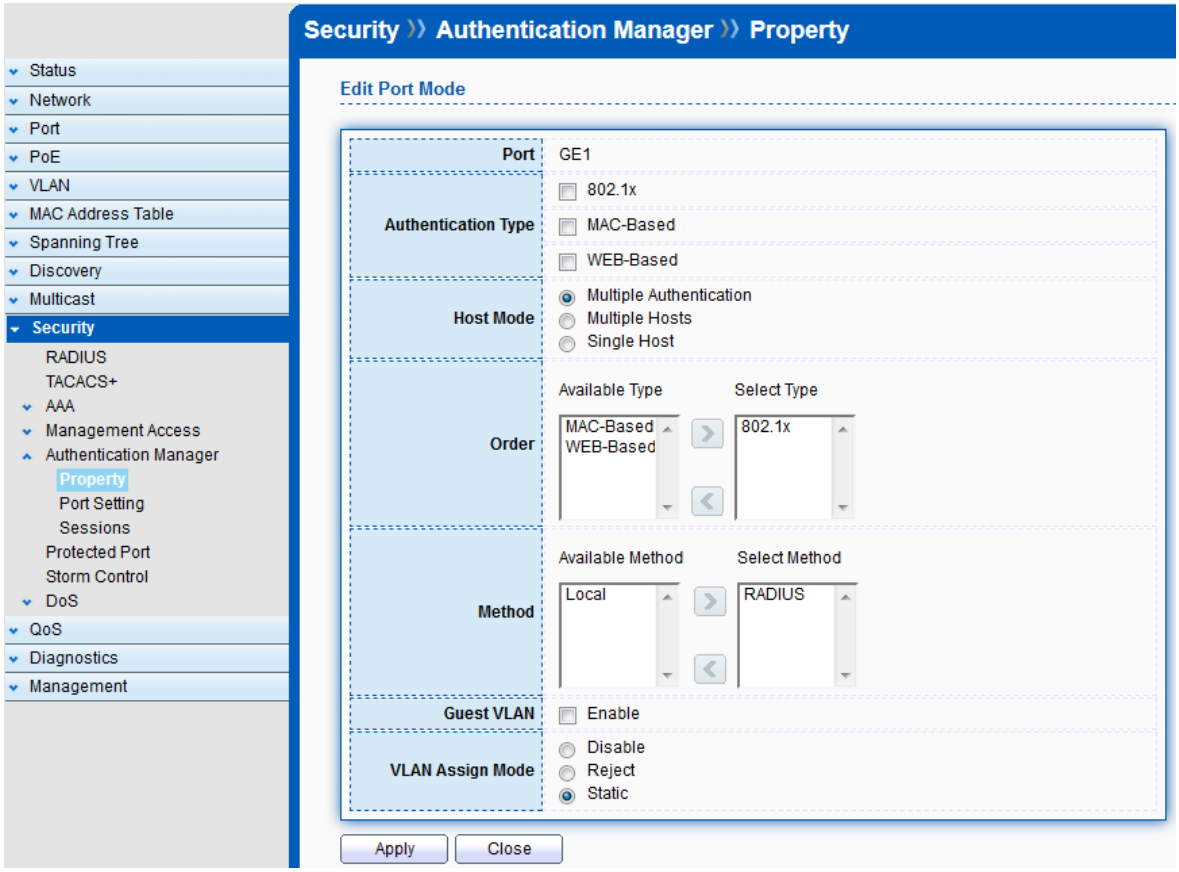
12.5.1 Property

Click **Security** > **Authentication Manager** > **Property**

This page allows user to change Authentication Type and Property.



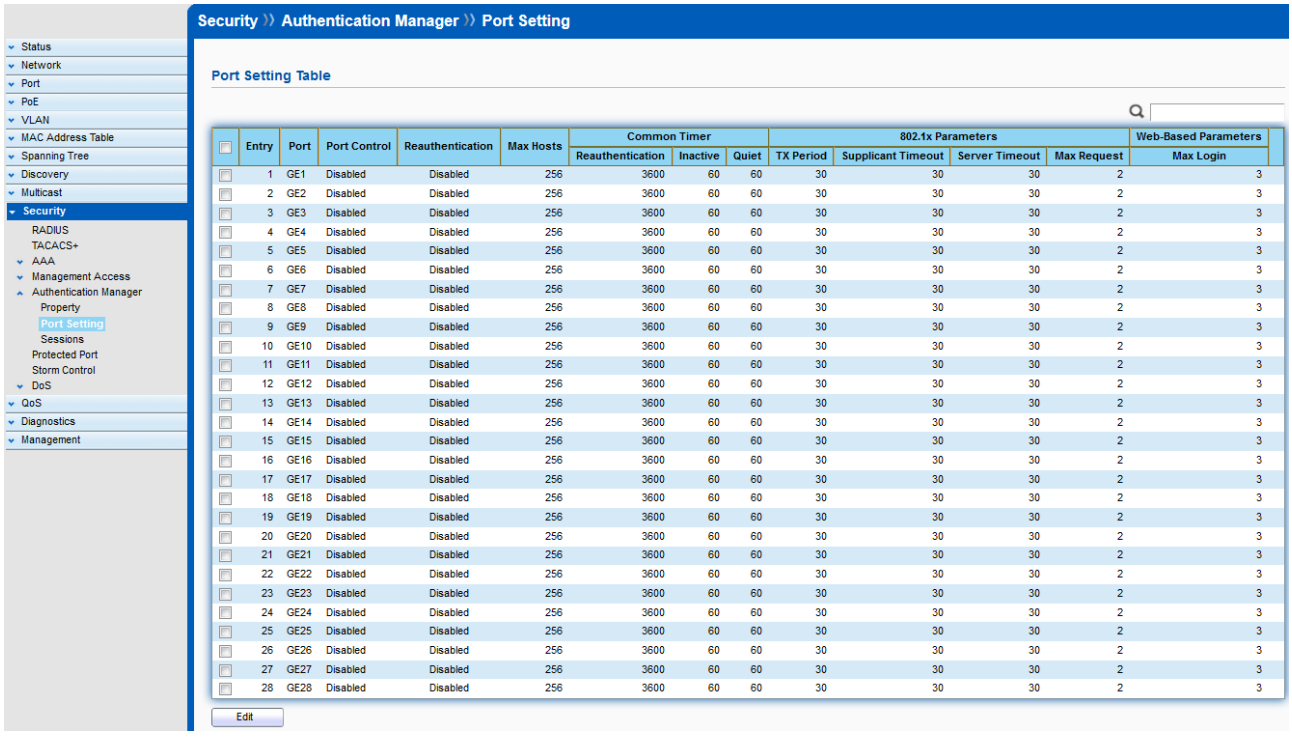
Select the ports in Port Mode Table and click "**Edit**" to edit Property.



12.5.2 Port Setting

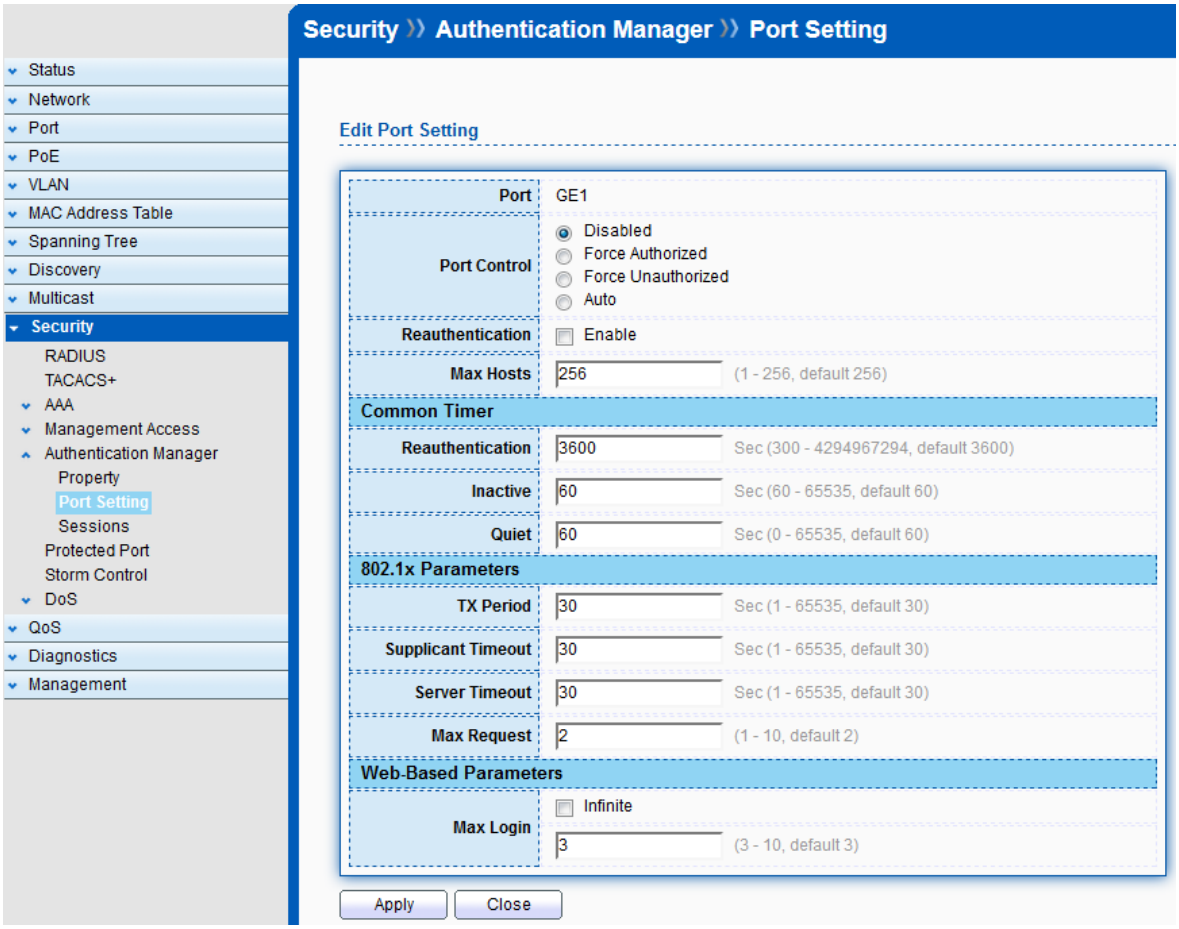
Click **Security** > **Authentication Manager** > **Port Setting**

This page allows user to change Port Setting.



Entry	Port	Port Control	Reauthentication	Max Hosts	Common Timer			802.1x Parameters				Web-Based Parameters
					Reauthentication	Inactive	Quiet	TX Period	Supplicant Timeout	Server Timeout	Max Request	Max Login
1	GE1	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
2	GE2	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
3	GE3	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
4	GE4	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
5	GE5	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
6	GE6	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
7	GE7	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
8	GE8	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
9	GE9	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
10	GE10	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
11	GE11	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
12	GE12	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
13	GE13	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
14	GE14	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
15	GE15	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
16	GE16	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
17	GE17	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
18	GE18	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
19	GE19	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
20	GE20	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
21	GE21	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
22	GE22	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
23	GE23	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
24	GE24	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
25	GE25	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
26	GE26	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
27	GE27	Disabled	Disabled	256	3600	60	60	30	30	30	2	3
28	GE28	Disabled	Disabled	256	3600	60	60	30	30	30	2	3

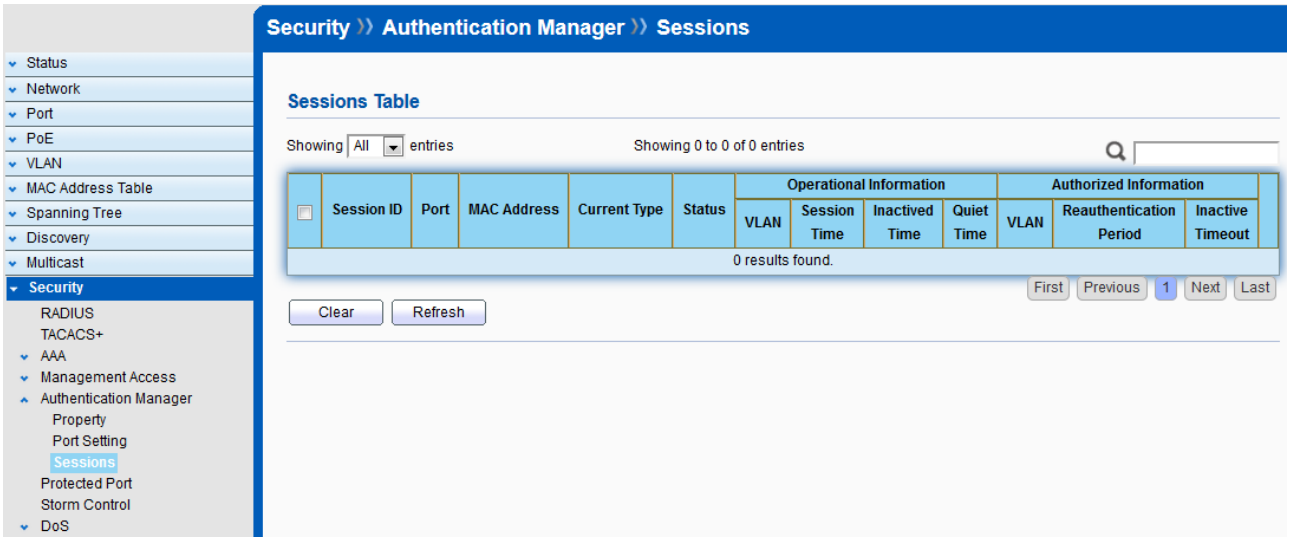
Select the ports in Port Setting Table and click "**Edit**" to edit Port Setting.



12.5.3 Sessions

Click **Security** > **Authentication Manager** > **Sessions**

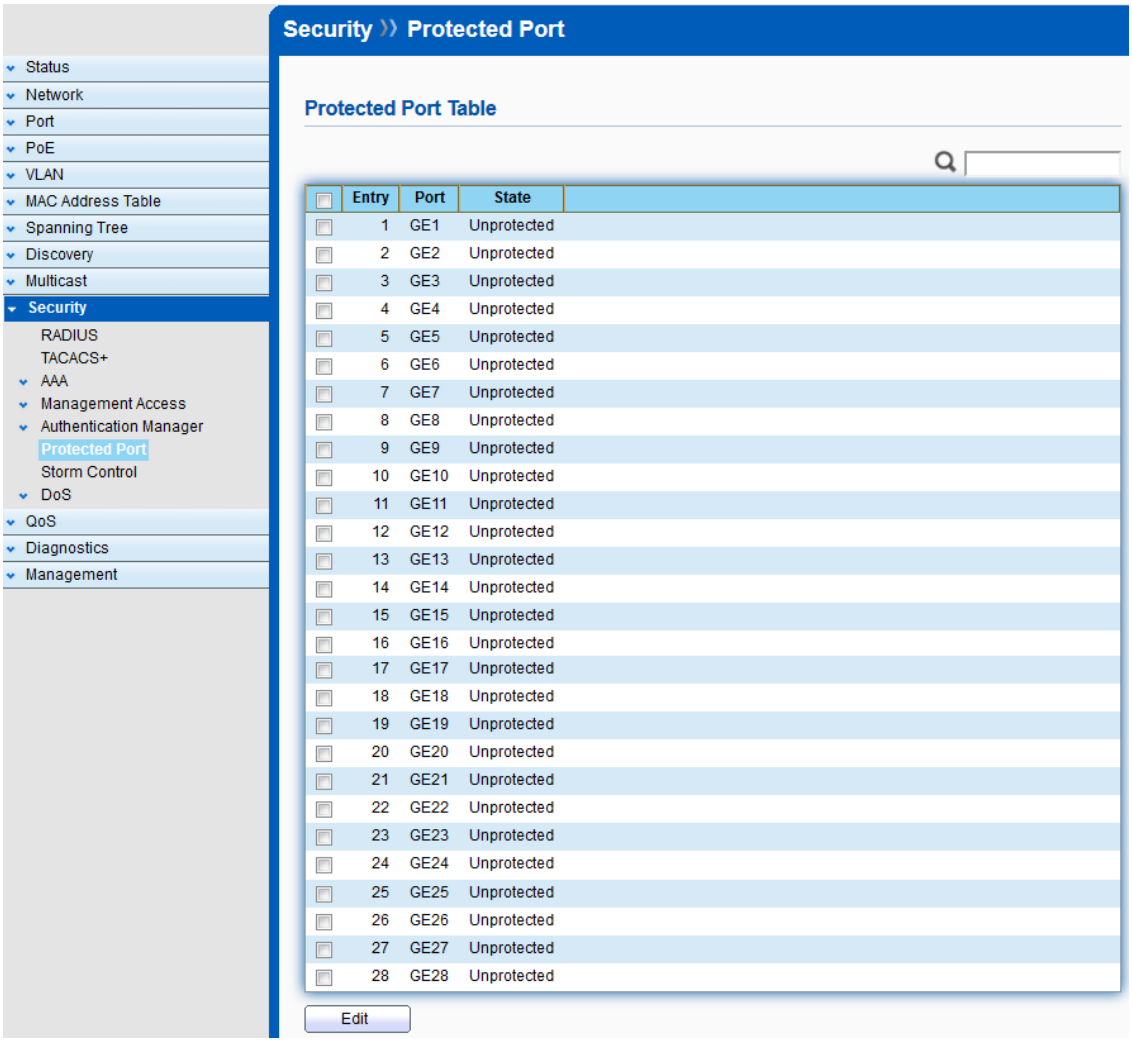
This page allows user to monitor Sessions.



12.6 Protected Port

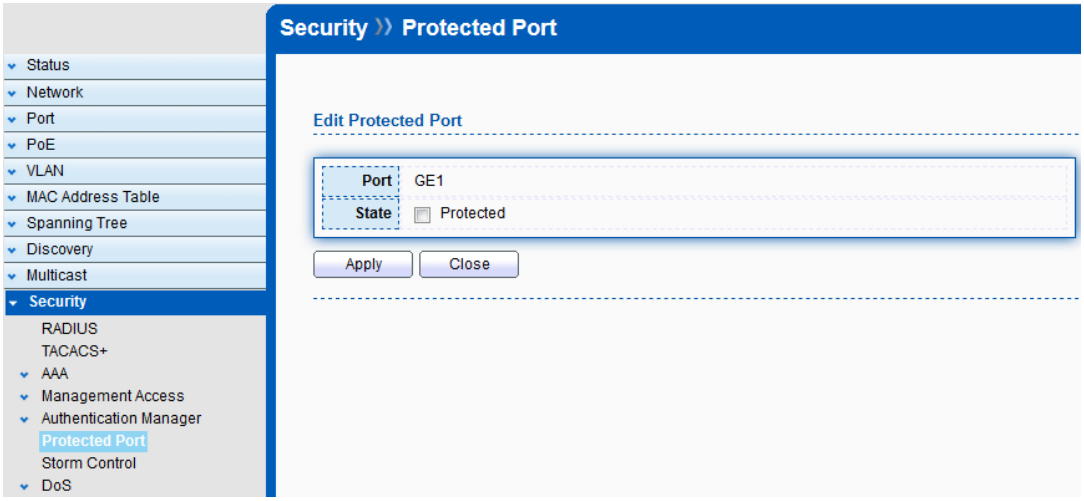
Click **Security** > **Protected Port**

This page allow user to configure protected port setting to prevent the selected ports from communication with each other. Protected port is only allowed to communicate with unprotected port. In other words, protected port is not allowed to communicate with another protected port.



Field	Description
Port	Port Name
State	Port protected admin state. **Protected**: Port is protected. **Unprotected**: Port is unprotected.

Click "**Edit**" to edit the protected port.

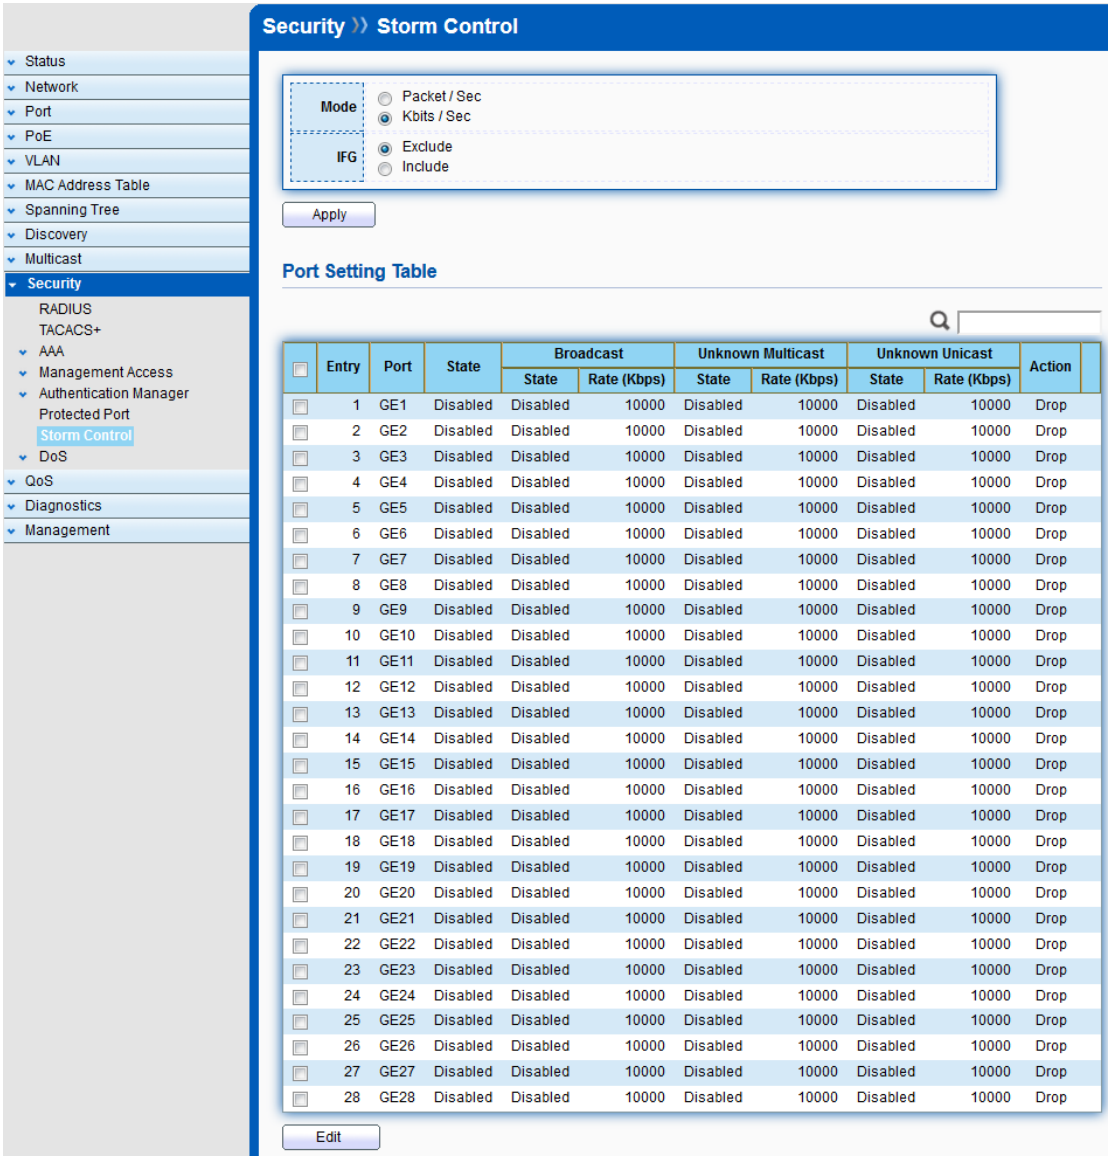


Field	Description
Port	Selected port list
State	Port protected admin state. **Protected**: Enable protecting function. **Unprotected**: Disable protecting function.

12.7 Storm Control

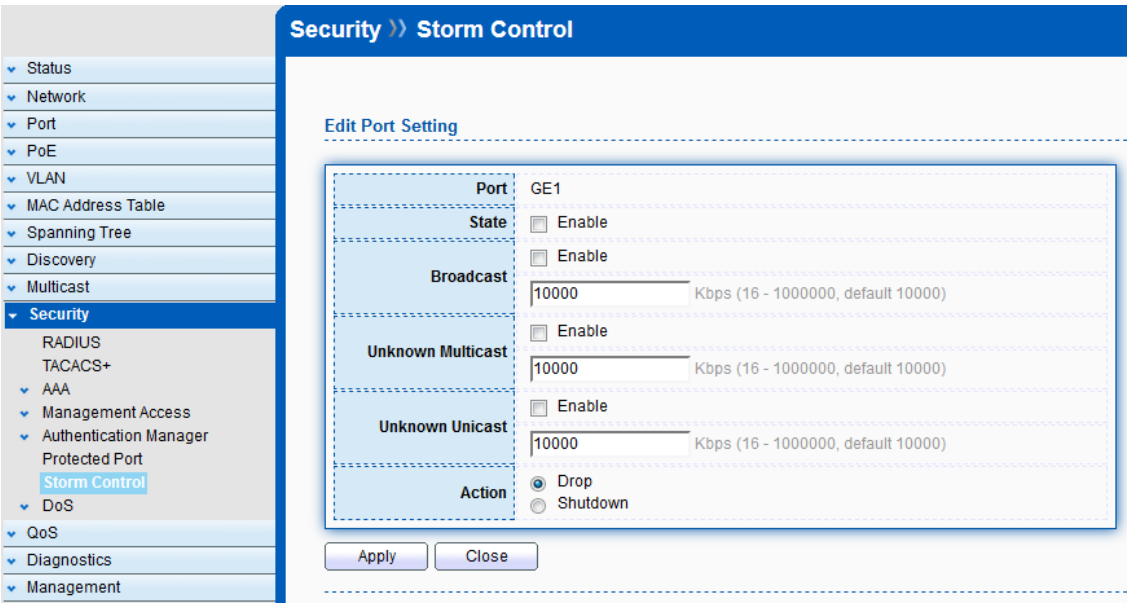
Click **Security** > **Storm Control**

To display Storm Control global setting web page.



Field	Description
Unit	Select the unit of storm control **Packet/Sec**: storm control rate calculates by packet-based **Kbits/Sec**: storm control rate calculates by octet-based
IFG	Select the rate calculates w/o preamble & IFG (20 bytes) **Excluded**: exclude preamble & IFG (20 bytes) when count ingress storm control rate. **Included**: include preamble & IFG (20 bytes) when count ingress storm control rate.

Click "**Edit**" to edit the storm control port setting web page.



Field	Description
Port	Select the setting ports
State	Select the state of setting. **Enable**: Enable the storm control function.
Broadcast	**Enable**: Enable the storm control function of broadcast packet. Value of storm control rate, Unit: pps (packet per-second, range 1~262143) or Kbps (Kbits per-second, range16~1000000) depends on global mode setting.
Unknown Multicast	**Enable**: Enable the storm control function of unknown multicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1~262143) or Kbps (Kbits per-second, range16~1000000) depends on global mode setting.
Unknown Unicast	**Enable**: Enable the storm control function of unknown unicast packet. Value of storm control rate, Unit: pps (packet per-second, range 1~262143) or Kbps (Kbits per-second, range16~1000000) depends on global mode setting.
Action	Select the state of setting. **Drop**: Packets exceed storm control rate will be dropped. **Shutdown**: Port will be shutdown when packets exceed storm control rate.

12.8 DoS

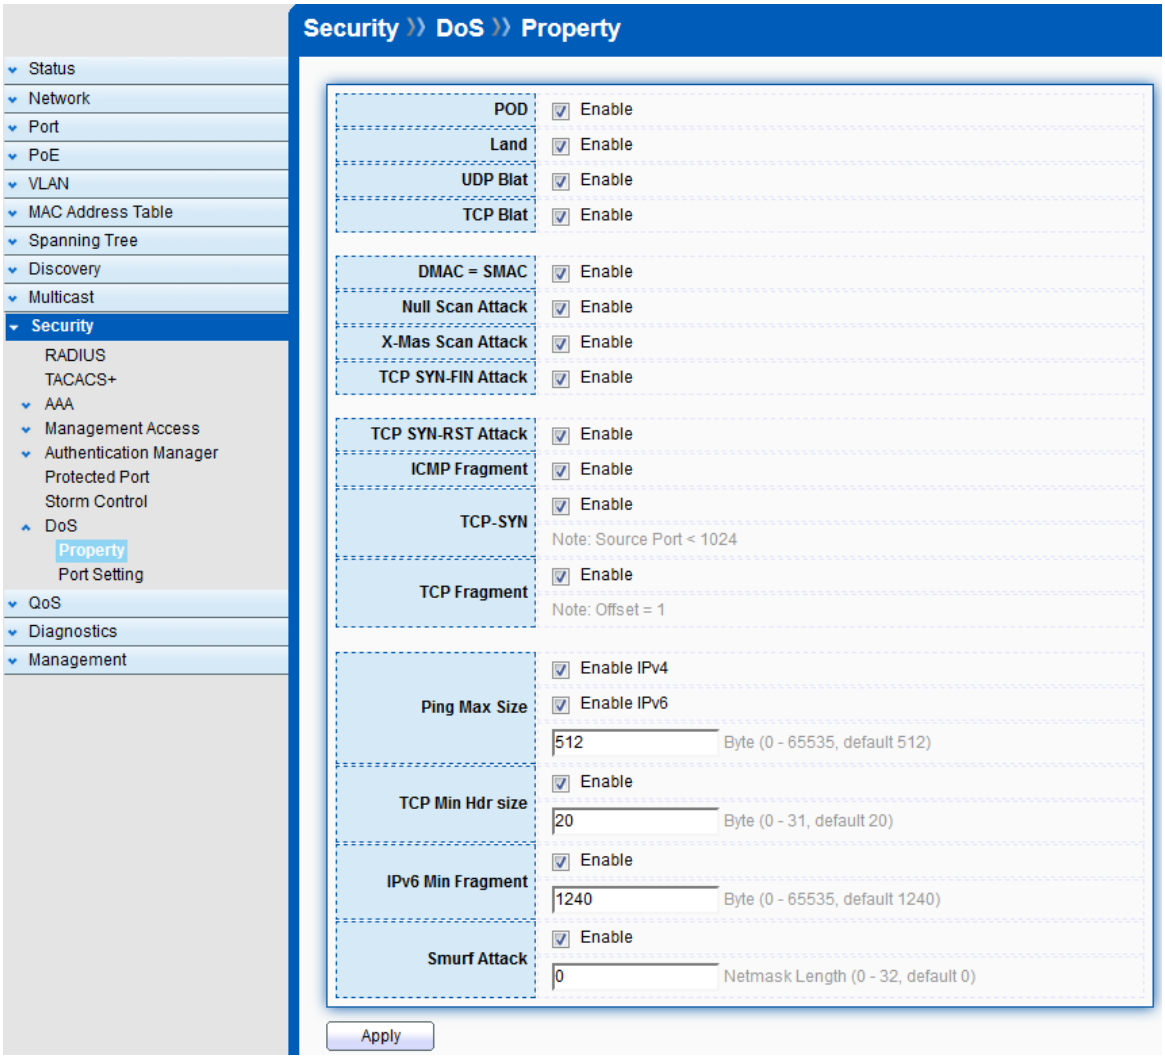
A Denial of Service (DoS) attack is a hacker attempt to make a device unavailable to its users. DoS attacks saturate the device with external communication requests, so that it cannot respond to legitimate traffic. These attacks usually lead to a device CPU overload.

The DoS protection feature is a set of predefined rules that protect the network from malicious attacks. The DoS Security Suite Setting enables activating the security suite.

12.8.1 Property

Click **Security** > **DoS** > **Property**

To display DoS Global Setting web page.



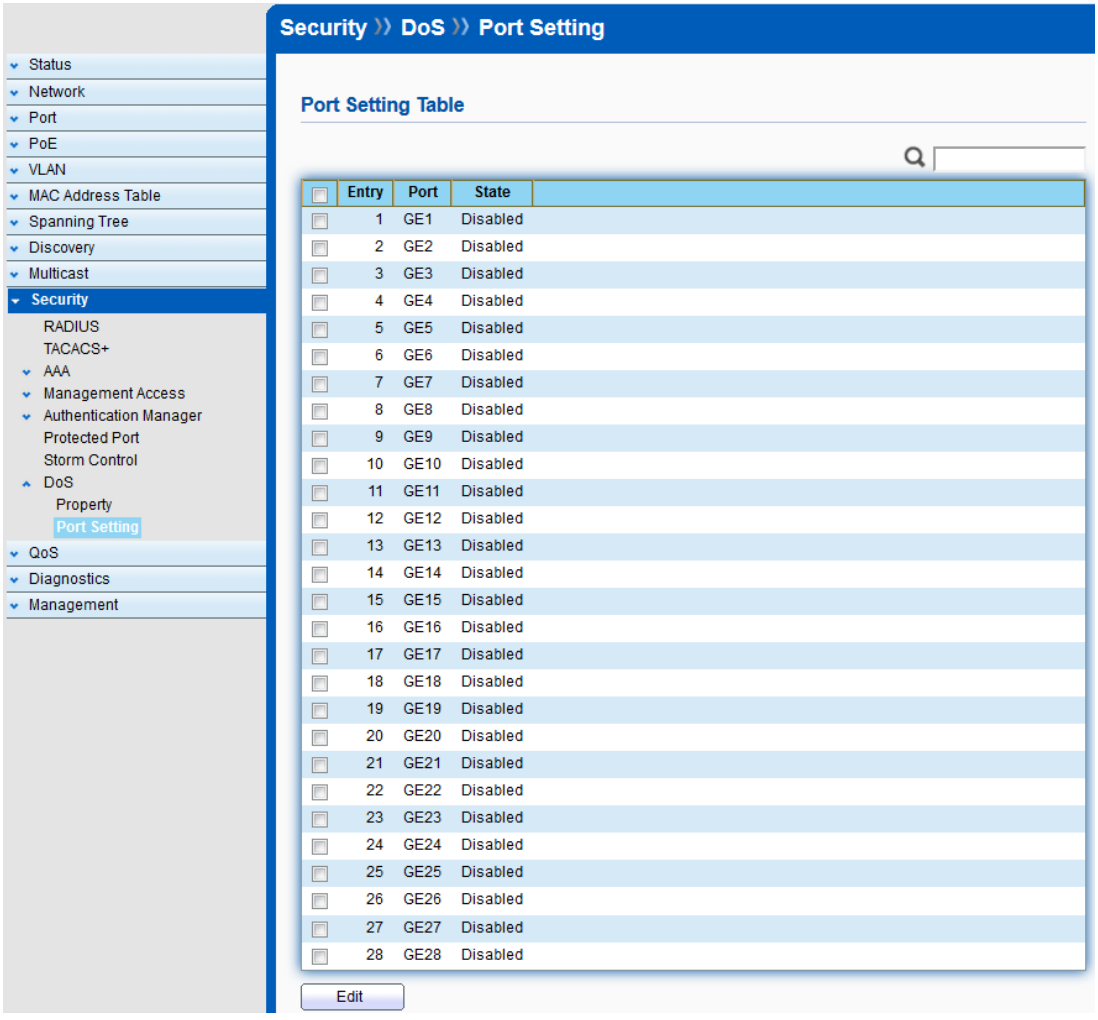
Field	Description
POD	Avoids ping of death attack.
Land	Drops the packets if the source IP address is equal to the destination IP address.
UDP Blat	Drops the packets if the UDP source port equals to the UDP destination port.
TCP Blat	Drops the packages if the TCP source port is equal to the TCP destination port.
DMAC=SMAC	Drops the packets if the destination MAC address is equal to the source MAC address.
Null Scan Attack	Drops the packets with NULL scan.
X-Mas Scan Attack	Drops the packets if the sequence number is zero, and the FIN, URG and PSH bits are set.
TCP SYN-FIN Attack	Drops the packets with SYN and FIN bits set.
TCP SYN-RST Attack	Drops the packets with SYN and RST bits set.
ICMP Fragment	Drops the fragmented ICMP packets.
TCP-SYN(SPORT	Drops SYN packets with sport less than 1024.

<1024)	
TCP Fragment (Offset=1)	Drops the TCP fragment packets with offset equals to one.
Ping Max Size	Specify the maximum size of the ICMPv4/ICMPv6 ping packets. The valid range is from 0 to 65535 bytes, and the default value is 512 bytes.
IPv4 Ping Max Size	Checks the maximum size of ICMP ping packets, and drops the packets larger than the maximum packet size.
IPv6 Ping Max Size	Checks the maximum size of ICMPv6 ping packets, and drops the packets larger than the maximum packet size
TCP Min Hdr Size	Checks the minimum TCP header and drops the TCP packets with the header smaller than the minimum size. The length range is from 0 to 31 bytes, and default length is 20 bytes.
IPv6 Min Fragment	Checks the minimum size of IPv6 fragments, and drops the packets smaller than the minimum size. The valid range is from 0 to 65535 bytes, and default value is 1240 bytes.
Smurf Attack	Avoid smurf attack. The length range of the netmask is from 0 to 323 bytes, and default length is 0 bytes.

12.8.2 Port Setting

Click **Security** > **DoS** > **Port Setting**

To configure and display the state of DoS protection for interfaces.



Field	Description
Port	Interface or port number.
State	Enable/Disable the DoS protection on the interface.

Chapter 13 QoS

QoS (Quality of Service) functions to provide different quality of service for various network applications and requirements and optimize the bandwidth resource distribution so as to provide a network service experience of a better quality

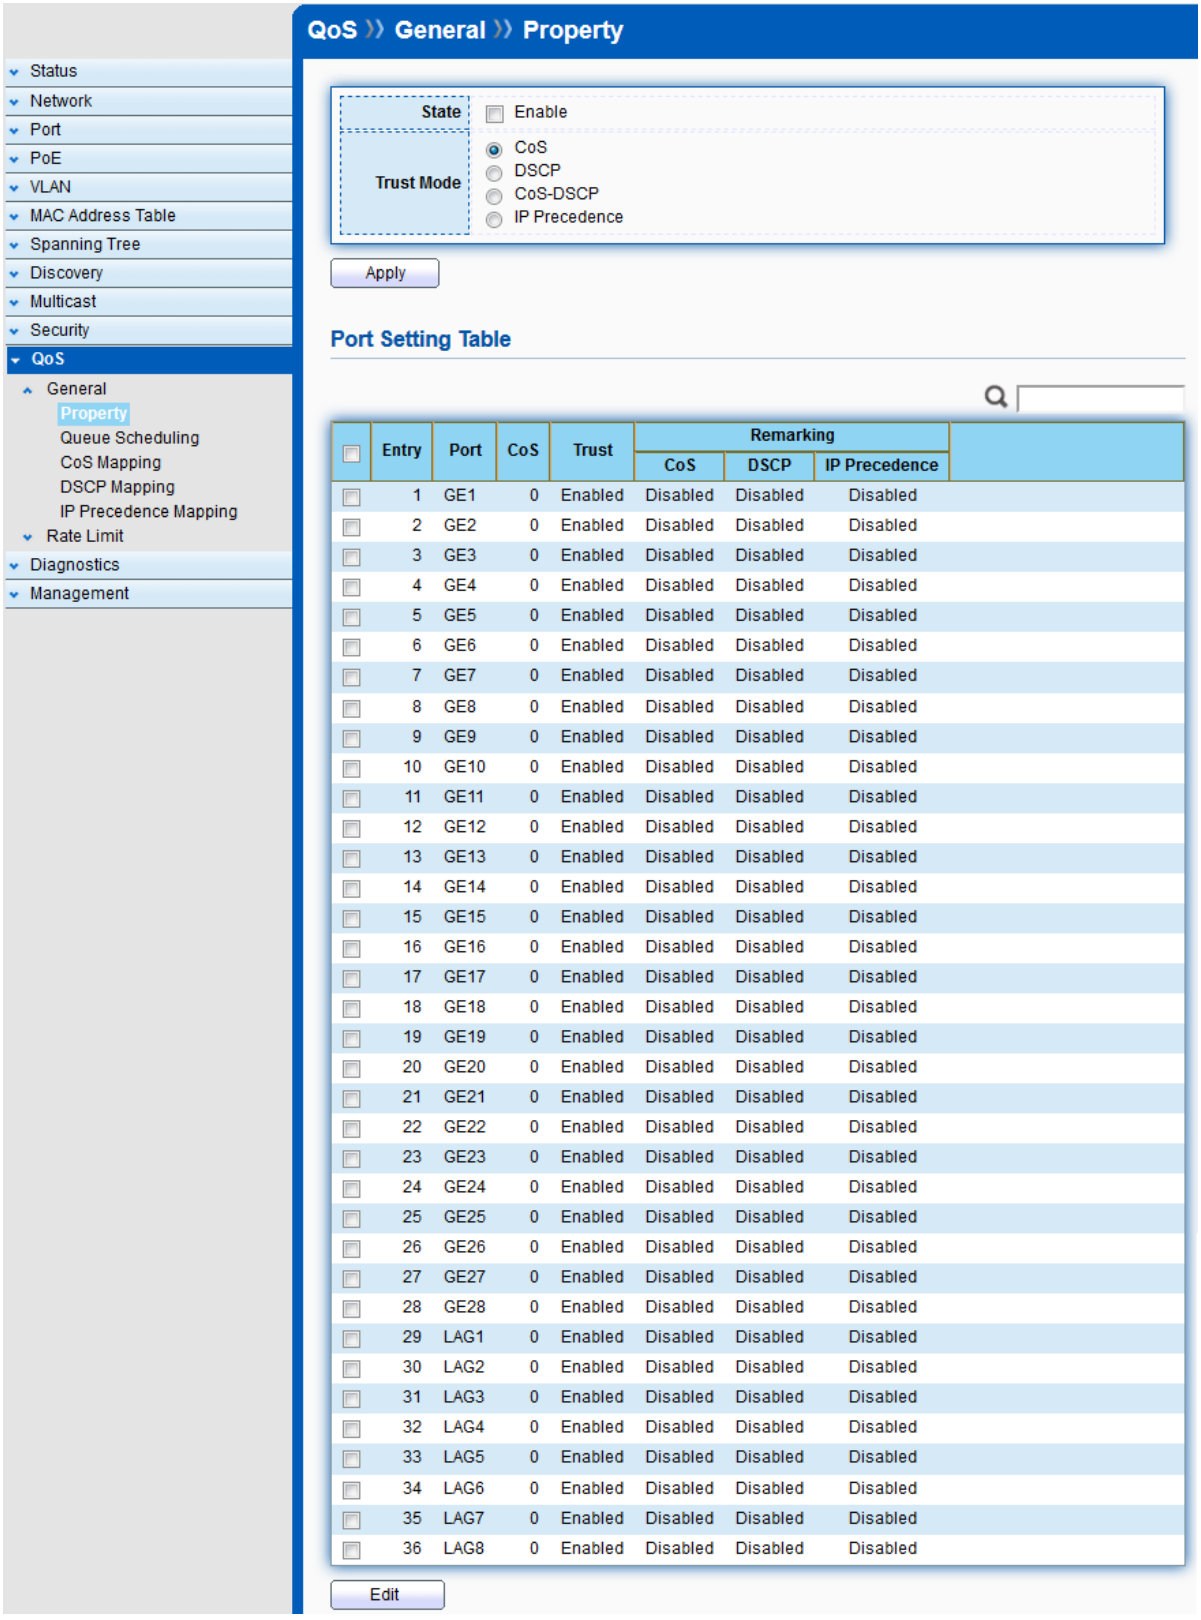
13.1 General

Use the QoS general pages to configure setting for general purpose.

13.1.1 Property

Click **QoS** > **General** > **Property**

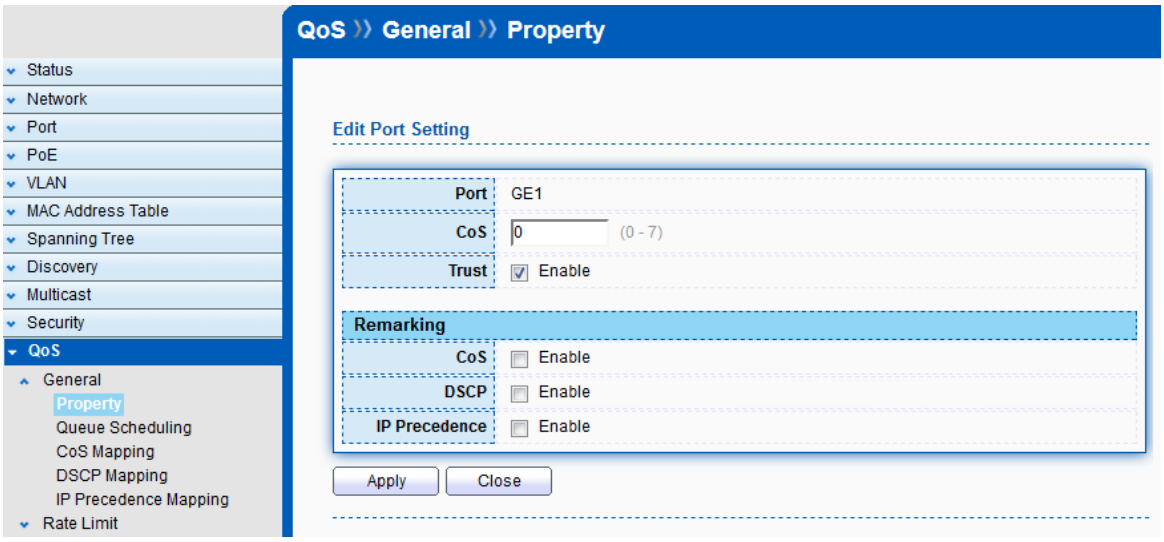
To display QoS property web page.



Field	Description
State	Set checkbox to enable/disable QoS.
Trust Mode	Select QoS trust mode. **CoS**: Traffic is mapped to queues based on the CoS field in the VLAN tag, or based on the per-port default CoS value (if there is no VLAN tag on the incoming packet), the actual mapping of the CoS to queue can be configured on port setting dialog.

	DSCP: All IP traffic is mapped to queues based on the DSCP field in the IP header. The actual mapping of the DSCP to queue can be configured on the DSCP mapping page. If traffic is not IP traffic, it is mapped to the best effort queue. **CoS-DSCP**: Uses the trust CoS mode for non-IP traffic and trust DSCP mode for IP traffic. IP Precedence: Traffic is mapped to queues based on the IP precedence. The actual mapping of the IP precedence to queue can be configured on the IP Precedence mapping page.
Field	**Description**
Port	Port name
CoS	Port default CoS priority value for the selected ports.
Trust	Port trust state **Enable**: Traffic will follow trust mode in global setting. **Disable**: Traffic will always use best efforts.
Remarking (CoS)	Port CoS remarking admin state. **Enable**: CoS remarking is enabled **Disable**: CoS remarking is disabled
Remarking (DSCP)	Port DSCP remarking admin state. **Enable**: DSCP remarking is enabled **Disable**: DSCP remarking is disabled
Remarking (IP Precedence)	Port IP Precedence remarking admin state. **Enable**: IP Precedence remarking is enabled **Disable**: IP Precedence remarking is disabled

Click "**Edit**" to edit the QoS port setting.



Field	Description
Port	Select port list
CoS	Set default CoS priority value for the selected ports.
Trust	Set checkbox to enable/disable port trust state.
Remarking (CoS)	Set checkbox to enable/disable port CoS remarking.
Remarking (DSCP)	Set checkbox to enable/disable port DSCP remarking.
Remarking (IP Precedence)	Set checkbox to enable/disable port IP Precedence remarking.

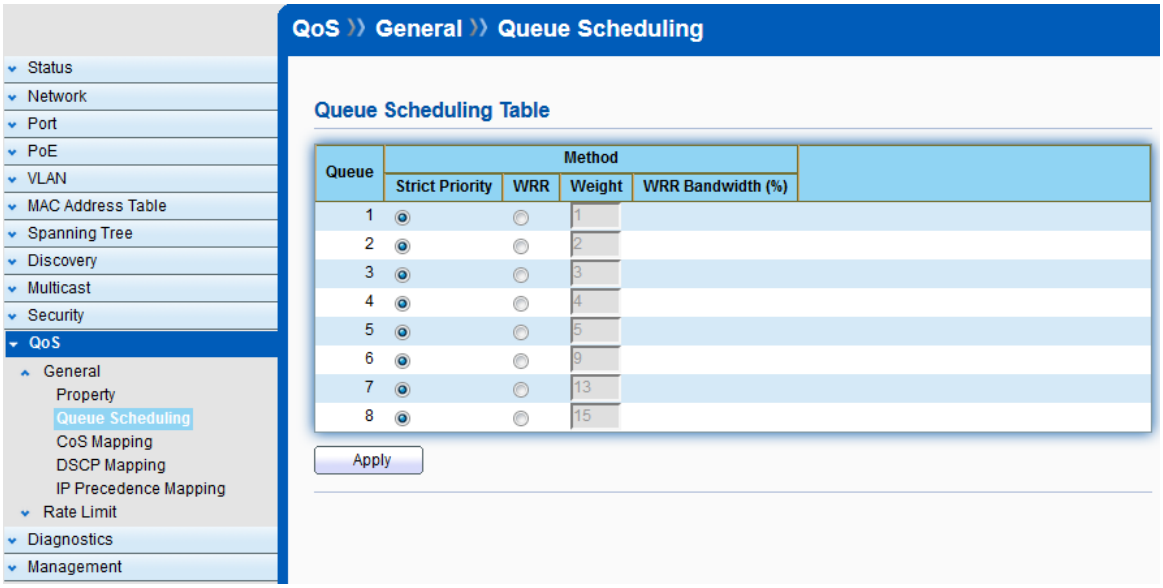
13.1.2 Queue Scheduling

Click **QoS** > **General** > **Queue Scheduling**

To display Queue Scheduling web page.

The switch supports eight queues for each interface. Queue number 8 is the highest priority queue. Queue number 1 is the lowest priority queue. There are two ways of determining how traffic in queues is handled, **Strict Priority (SP)** and **Weighted Round Robin (WRR)**.
Strict Priority (SP): Egress traffic from the highest priority queue is transmitted first. Traffic from the lower queues is processed only after the highest queue has been transmitted, which provide the highest level of priority of traffic to the highest numbered queue.
Weighted Round Robin (WRR): In WRR mode the number of packets sent from the queue is proportional to the weight of the queue (the higher the weight, the more frames are sent).

The queuing mode can be selected on the Queue page. When the queuing mode is by Strict Priority, the priority sets the order in which queues are serviced, starting with queue_8 (the highest priority queue) and going to the next lower queue when each queue is completed.
When the queuing mode is Weighted Round Robin, queues are serviced until their quota has been used up and then another queue is serviced. It is also possible to assign some of the lower queues to WRR, while keeping some of the higher queues in Strict Priority. In this case traffic for the SP queues is always sent before traffic from the WRR queues. After the SP queues have been emptied, traffic from the WRR queues is forwarded. (The relative portion from each WRR queue depends on its weight).



Field	Description
Queue	Queue ID to configure
Strict Priority	Set queue to strict priority type
WRR	Set queue to Weight Round Robin type.
Weight	If the queue type is WRR, set the queue weight for the queue.

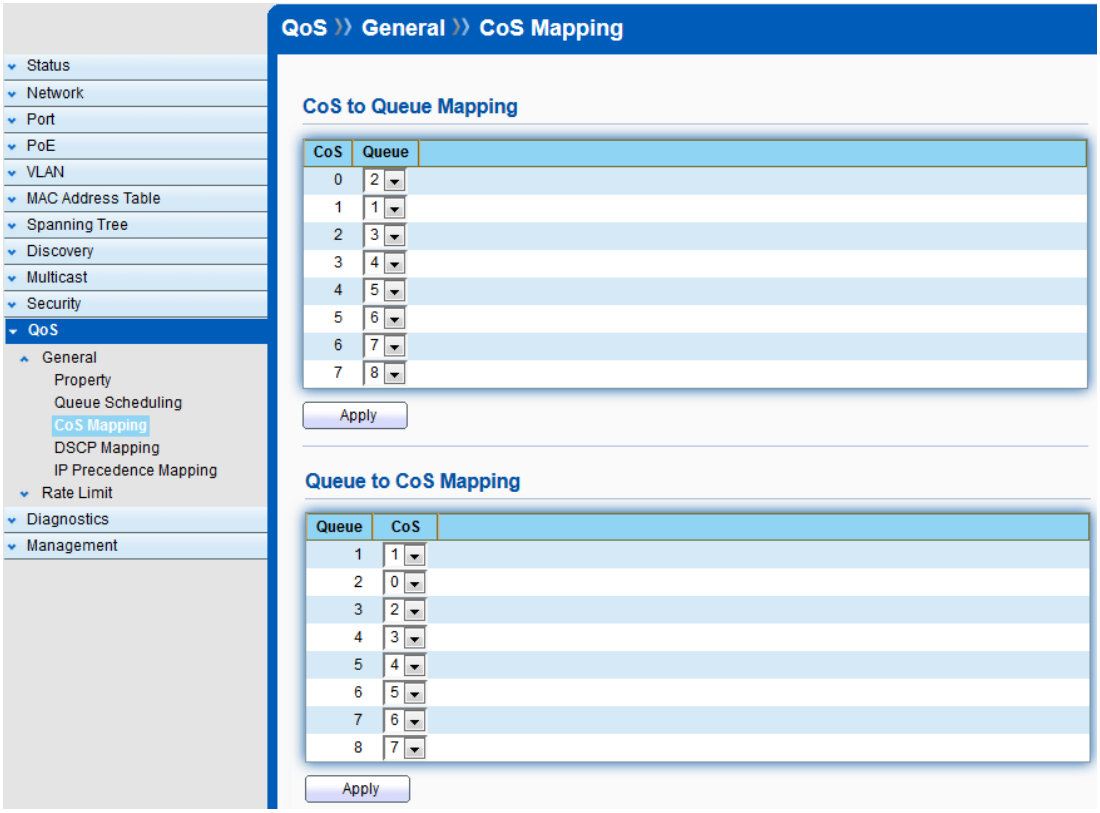
WRR Bandwidth	Percentage of WRR queue bandwidth.

13.1.3 CoS Mapping

Click **QoS** > **General** > **CoS Mapping**

To display CoS Mapping web page.

The CoS to Queue table determines the egress queues of the incoming packets based on the 802.1p priority in their VLAN tags. For incoming untagged packets, the 802.1p priority will be the default CoS/802.1p priority assigned to the ingress ports.
Use the Queues to CoS table to remark the CoS/802.1p priority for egress traffic from each queue.



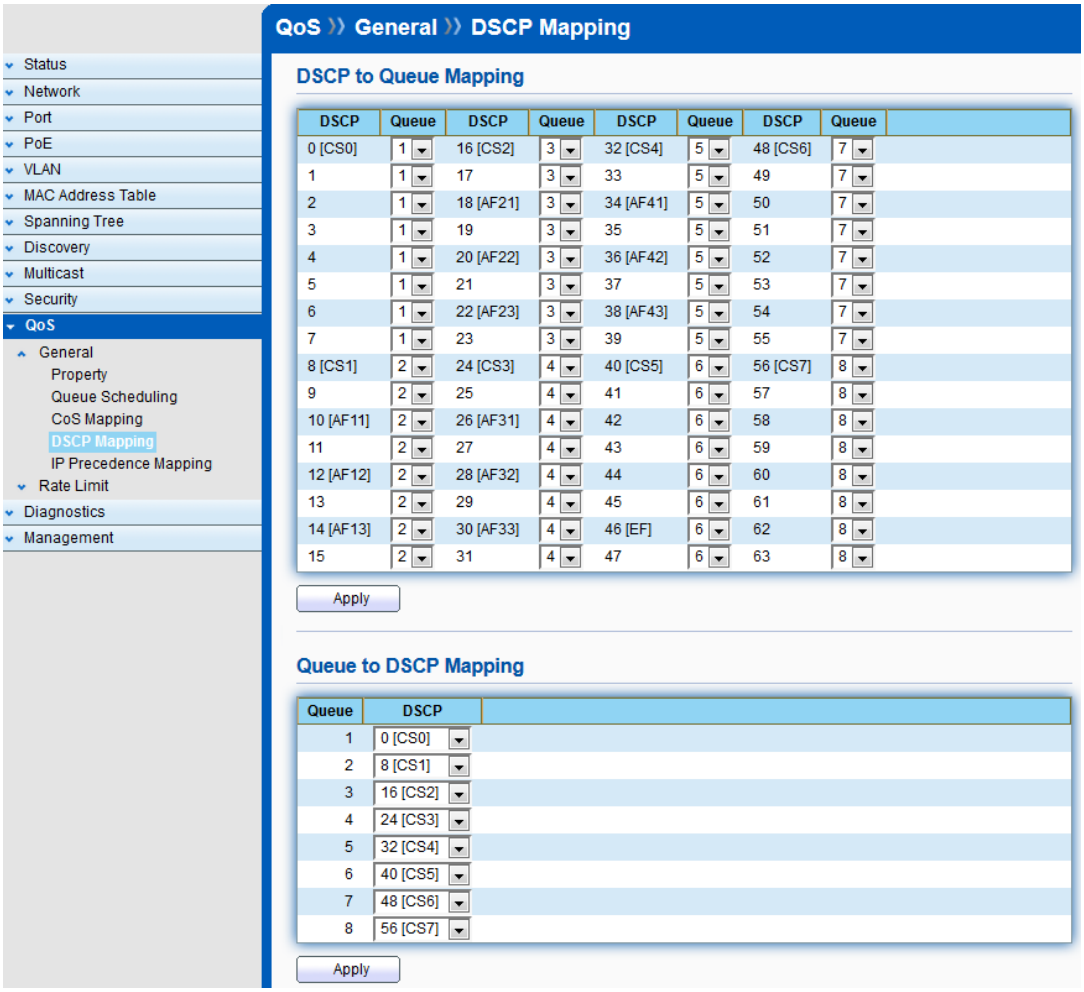
Field	Description
CoS	CoS value
Queue	Select queue ID for the CoS value
Field	**Description**
Queue	Queue ID
CoS	Select CoS value for the queue ID.

13.1.4 DSCP Mapping

Click **QoS** > **General** > **DSCP Mapping**

To display DSCP Mapping web page.

The DSCP to Queue table determines the egress queues of the incoming IP packets based on their DSCP values. The original VLAN Priority Tag (VPT) of the packet is unchanged.
Use the Queues to DSCP page to remark DSCP value for egress traffic from each queue.

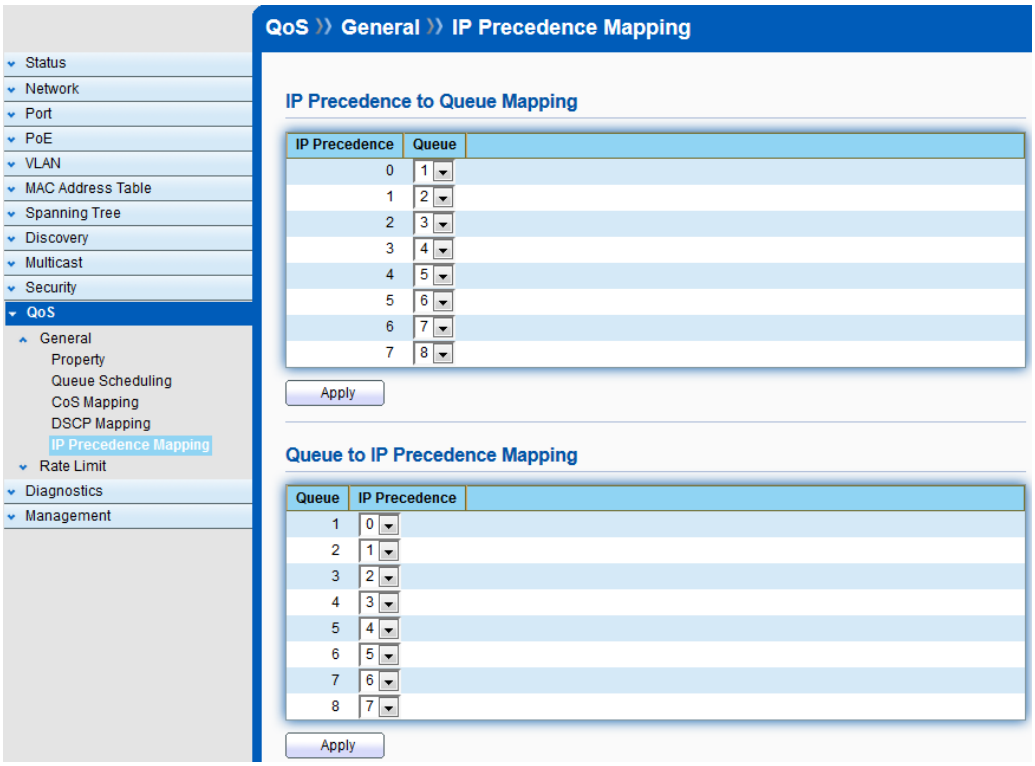


Field	Description
DSCP	DSCP value
Queue	Select Queue ID for DSCP value.
Field	**Description**
Queue	Queue ID
DSCP	Select DSCP value for Queue ID.

13.1.5 IP Precedence Mapping

Click **QoS** > **General** > **IP Precedence Mapping**

To display IP Precedence Mapping web page.
This page allow user to configure IP Precedence to Queue Mapping and Queue to IP Precedence Mapping.



Field	Description
IP Precedence	IP Precedence value
Queue	Queue value which IP Precedence is mapped.
Field	**Description**
Queue	Queue ID
IP Precedence	IP Precedence value which queue is mapped.

13.2 Rate Limit

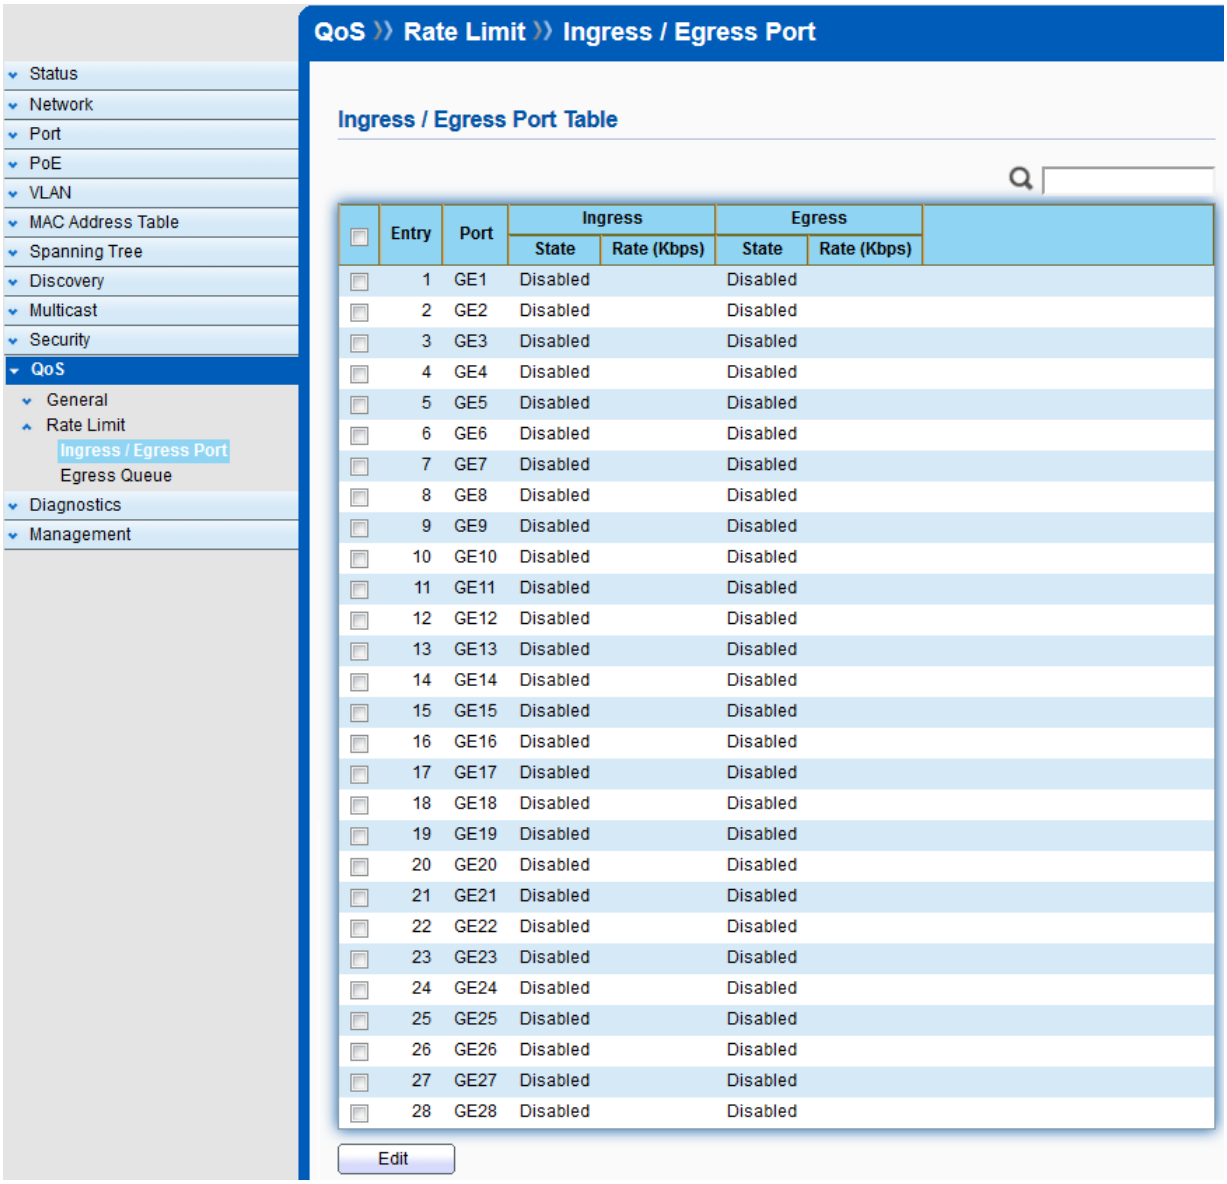
Use the Rate Limit pages to define values that determine how much traffic the switch can receive and send on specific port or queue.

13.2.1 Ingress / Egress Port

Click **QoS** > **Rate Limit** > **Ingress/Egress**

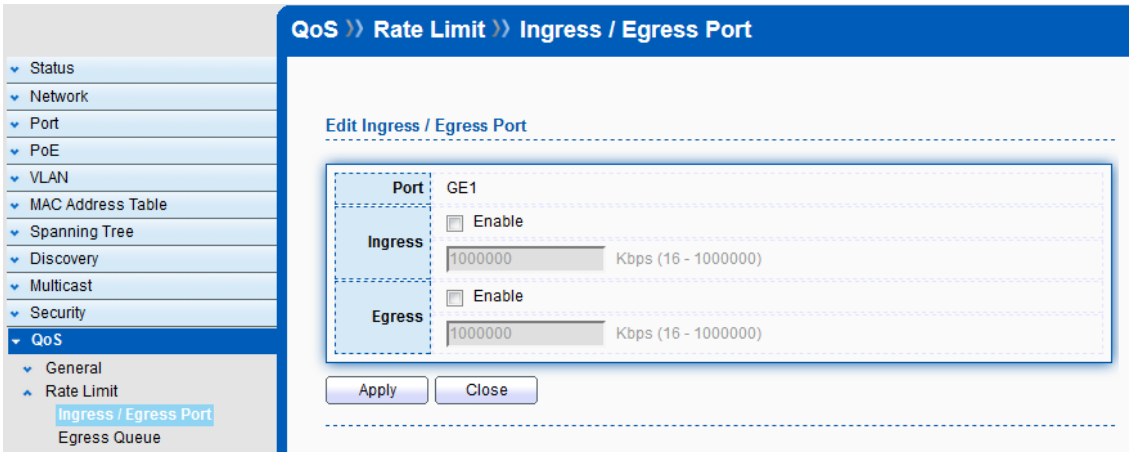
To display Ingress/Egress Port web page.

This page allow user to configure ingress port rate limit and egress port rate limit. The ingress rate limit is the number of bits per second that can be received from the ingress interface. Excess bandwidth above this limit is discarded.



Field	Description
Port	Port name
Ingress (State)	Port ingress rate limit state Enable: Ingress rate limit is enabled. Disable: Ingress rate limit is disabled.
Ingress (Rate)	Port ingress rate limit value if ingress rate state is enabled.
Egress (State)	Port egress rate limit state Enable: Egress rate limit is enabled. Disable: Egress rate limit is disabled.
Egress (Rate)	Port egress rate limit value if egress rate state is enabled.

Click "**Edit**" to edit Ingress/Egress Port.



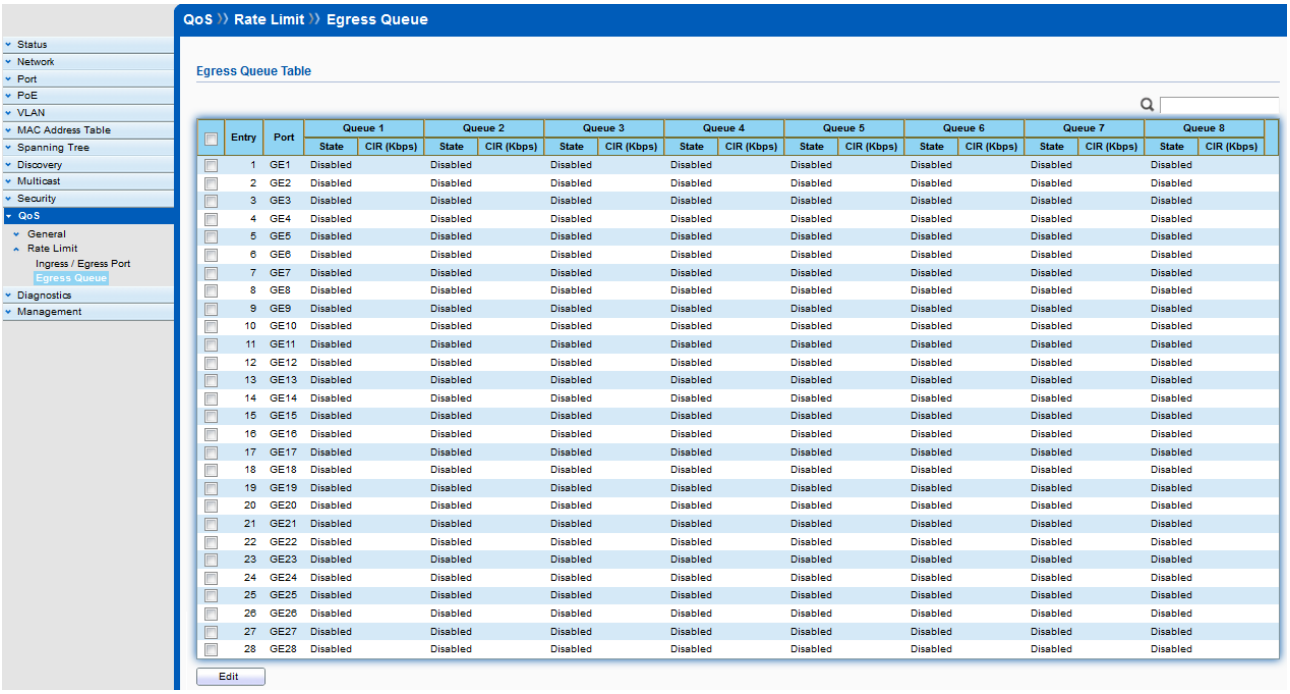
Field	Description
Port	Select Port list
Ingress	Set checkbox to enable/disable ingress rate limit. If ingress rate limit is enabled, rate limit value need to be assigned.
Egress	Set checkbox to enable/disable egress rate limit. If egress rate limit is enabled, rate limit value need to be assigned.

13.2.2 Egress Queue

Click **QoS** > **Rate Limit** > **Egress Queue**

To display Egress Queue web page.

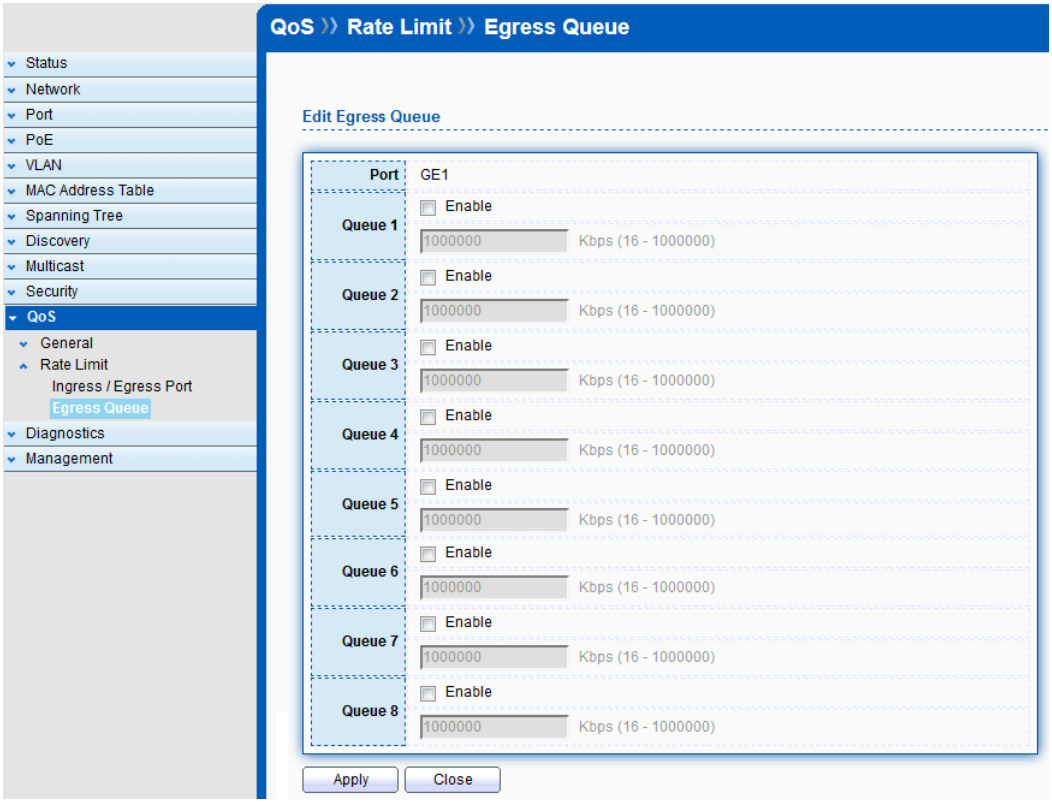
Egress rate limiting is performed by shaping the output load.



Field	Description
Port	Port name
Queue 1 (State)	Port egress queue 1 rate limit state.

	Enable: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 1 (CIR)	Queue 1 egress committed information rate.
Queue 2 (State)	Port egress queue 2 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 2 (CIR)	Queue 2 egress committed information rate.
Queue 3 (State)	Port egress queue 3 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 3 (CIR)	Queue 3 egress committed information rate.
Queue 4 (State)	Port egress queue 4 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 4 (CIR)	Queue 4 egress committed information rate.
Queue 5 (State)	Port egress queue 5 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 5 (CIR)	Queue 5 egress committed information rate.
Queue 6 (State)	Port egress queue 6 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 6 (CIR)	Queue 6 egress committed information rate.
Queue 7 (State)	Port egress queue 7 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 7 (CIR)	Queue 7 egress committed information rate.
Queue 8 (State)	Port egress queue 8 rate limit state. **Enable**: Egress queue rate limit is enable. **Disable**: Egress queue rate limit is disable.
Queue 8 (CIR)	Queue 8 egress committed information rate.

Click "**Edit**" to edit Egress Queue



Field	Description
Port	Select port list
Queue 1	Set checkbox to enable/disable egress queue 1 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 2	Set checkbox to enable/disable egress queue 2 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 3	Set checkbox to enable/disable egress queue 3 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 4	Set checkbox to enable/disable egress queue 4 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 5	Set checkbox to enable/disable egress queue 5 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 6	Set checkbox to enable/disable egress queue 6 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 7	Set checkbox to enable/disable egress queue 7 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.
Queue 8	Set checkbox to enable/disable egress queue 8 rate limit. If egress rate limit is enabled, rate limit value need to be assigned.

Chapter 14 Diagnostics

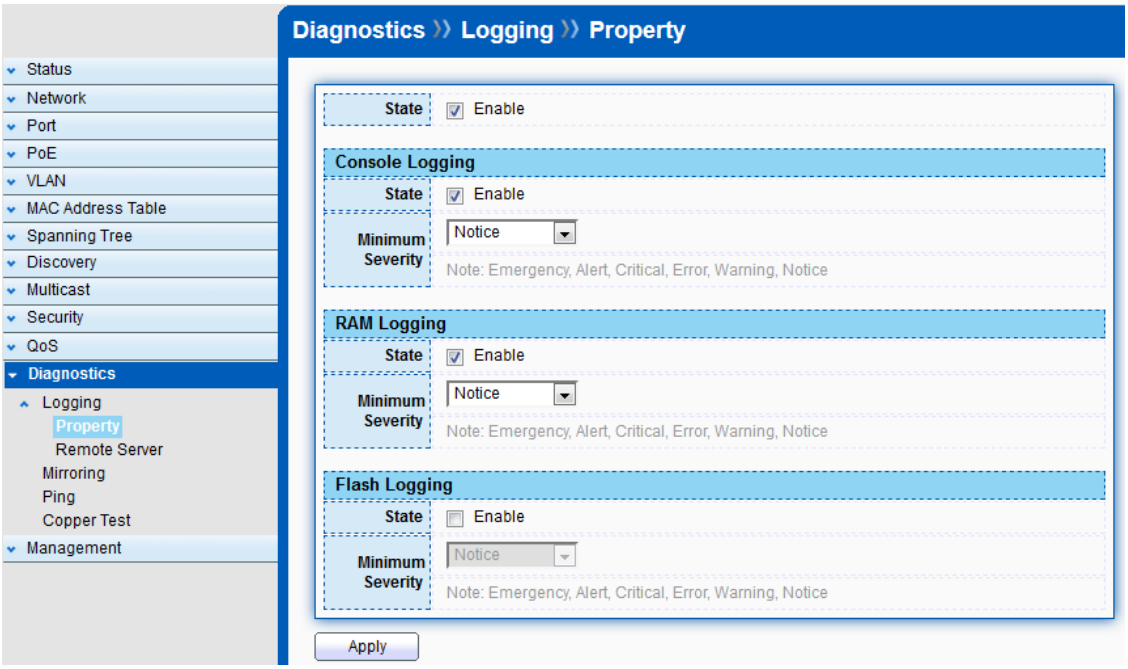
Use the Diagnostic pages to configure settings for the switch diagnostics feature or operating diagnostic utilities.

14.1 Logging

14.1.1 Property

Click **Diagnostics** > **Logging** > **Property**

To display the Logging Service web page.



Field	Description
State	Enable/Disable the global logging services. When the logging service is enabled, logging configuration of each destination rule can be individually configured. If the logging service is disabled, no messages will be sent to these destinations.

Console Logging

Field	Description
State	Enable/Disable the console logging service.
Minimum Severity	The minimum severity for the console logging.

RAM Logging

Field	Description
State	Enable/Disable the RAM logging service.
Minimum Severity	The minimum severity for the RAM logging.

Flash Logging

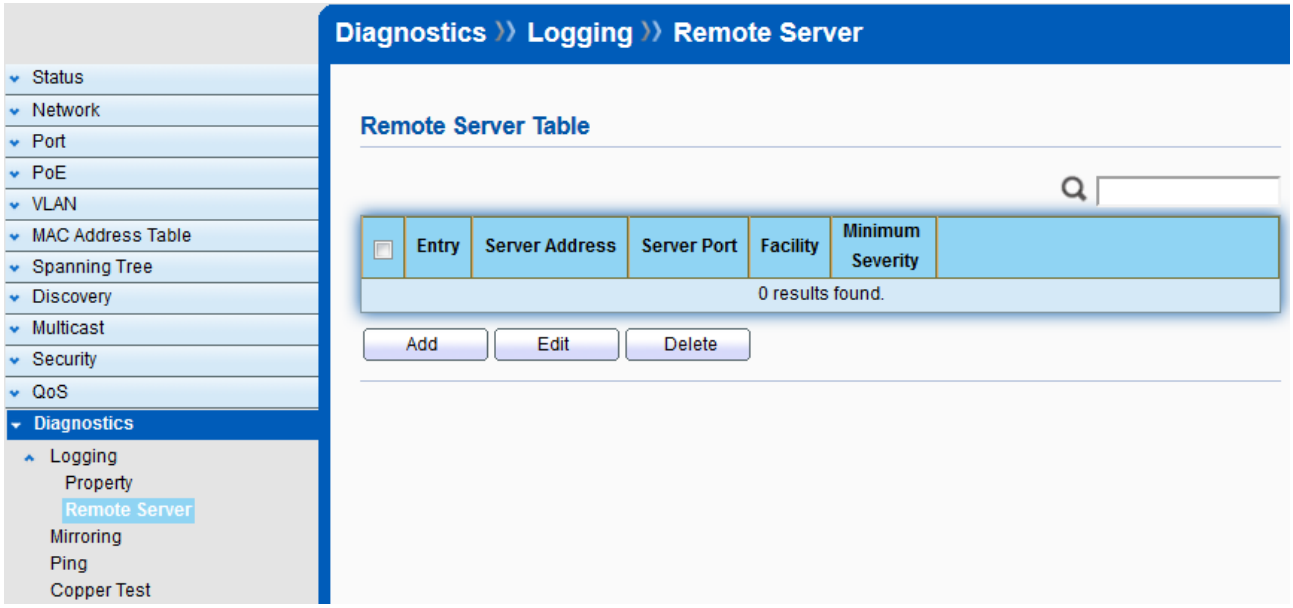
Field	Description

State	Enable/Disable the Flash logging service.
Minimum Severity	The minimum severity for the Flash logging.

14.1.2 Remote Server

Click **Diagnostics** > **Logging** > **Remote Server**

To display the Remote Logging Server web page.

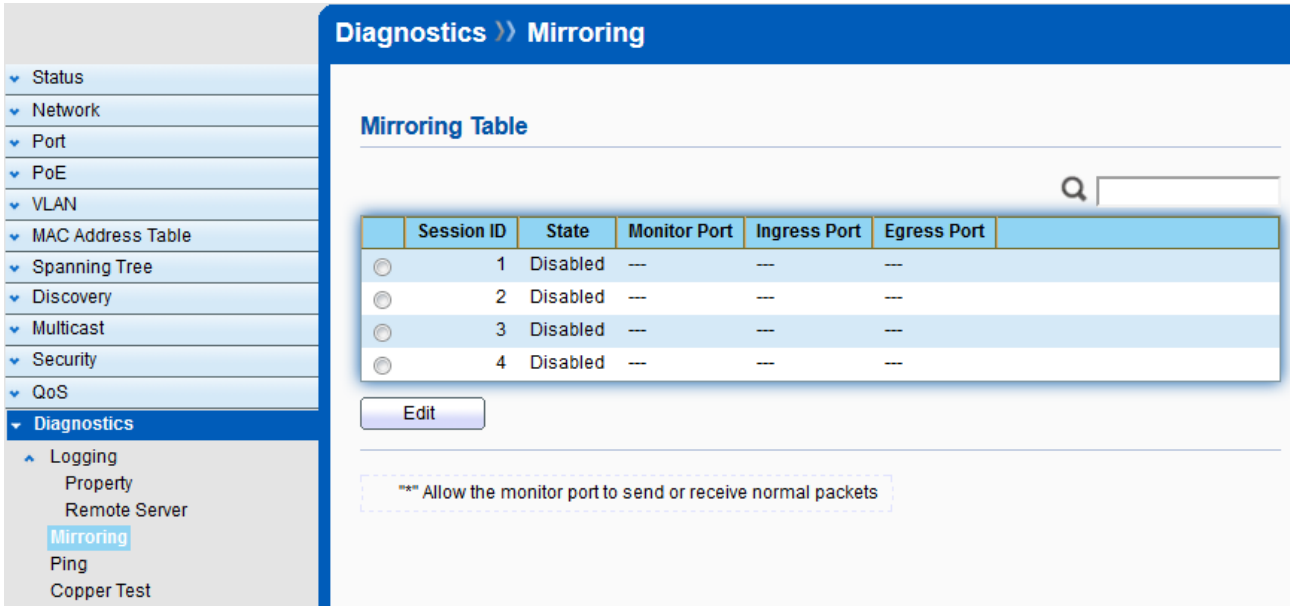


Field	Description
Server Address	The IP address of the remote logging server.
Server Ports	The port number of the remote logging server.
Facility	The facility of the logging messages. It can be one of the following values: local0, local1, local2, local3, local4, local5, local6, and local7.
Severity	The minimum severity **Emergence**: System is not usable. **Alert**: Immediate action is needed. **Critical**: System is in the critical condition. **Error**: System is in error condition. **Warning**: System warning has occurred. **Notice**: System is functioning properly, but a system notice has occurred. **Informational**: Device information. **Debug**: Provides detailed information about an event.

14.2 Mirroring

Click **Diagnostics** > **Mirroring**

To display the Port Mirroring web page.

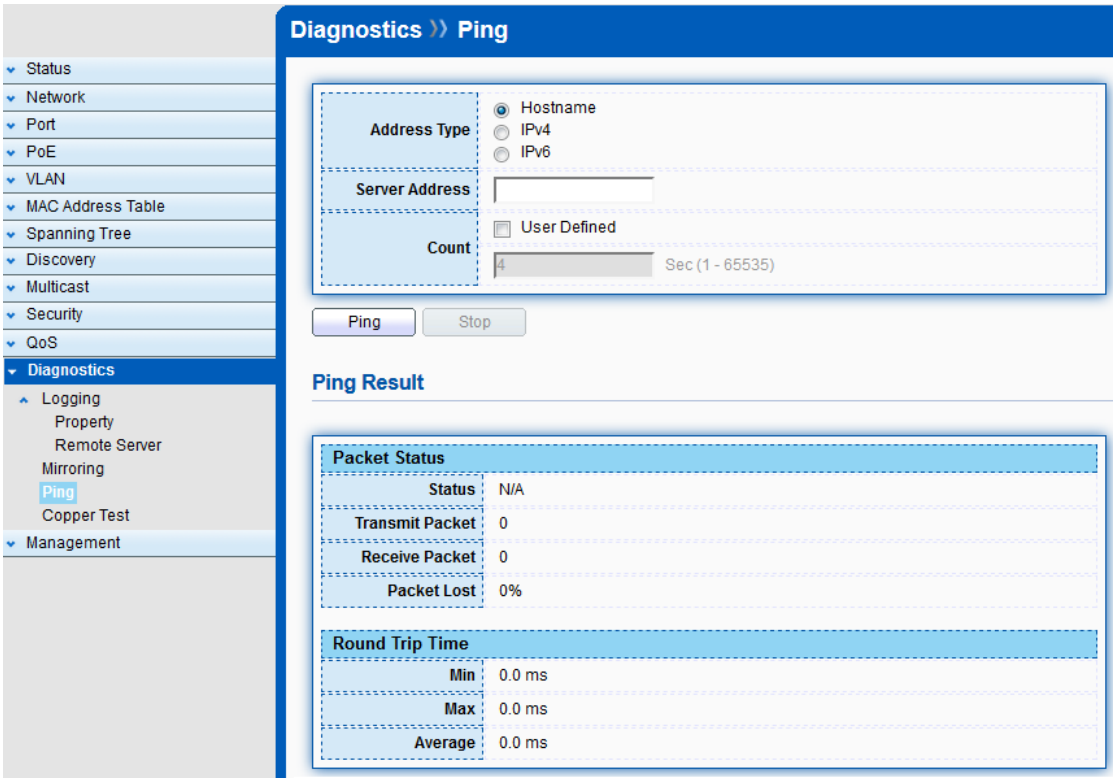


Field	Description
Session ID	Select mirror session ID
State	Select mirror session state : port-base mirror or disable **Enabled** : Enable port based mirror **Disabled** : Disable mirror
Monitor Port	Select mirror session monitor port, and select. Whether normal packet could be sent or received by monitor port.
Ingress Port	Select mirror session source RX ports.
Egress Port	Select mirror session source TX ports.

14.3 Ping

Click **Diagnostics** > **Ping**

To display the Diagnostic Ping functionality web page.

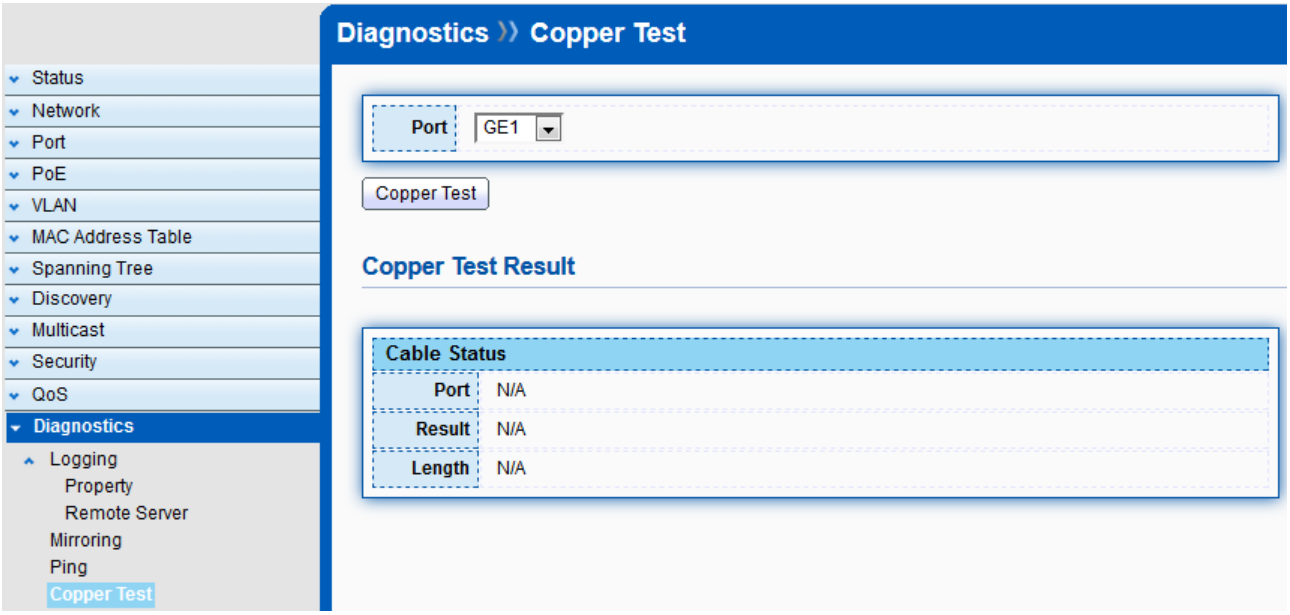


Field	Description
Address Type	Specify the address type to “Hostname”, “IPv4”, or “IPv6”.
Server Address	Specify the Hostname/IPv4/IPv6 address for the remote logging server.
Count	Specify the numbers of each ICMP ping request.

14.4 Copper Test

Click **Diagnostics** > **Copper Test**

To test the copper length diagnostic.



Field	Description
Port	Specify the interface for the copper test.

Copper Test Result

Field	Description
Port	**The interface for the copper test.**
Result	The status of copper test. It include: **OK**: Correctly terminated pair. **Short Cable**: Shorted pair. **Open Cable**: Open pair, no link partner. **Impedance Mismatch**: Terminating impedance is not in the reference range.
Length	Distance in meter from the port to the location on the cable where the fault was discovered.

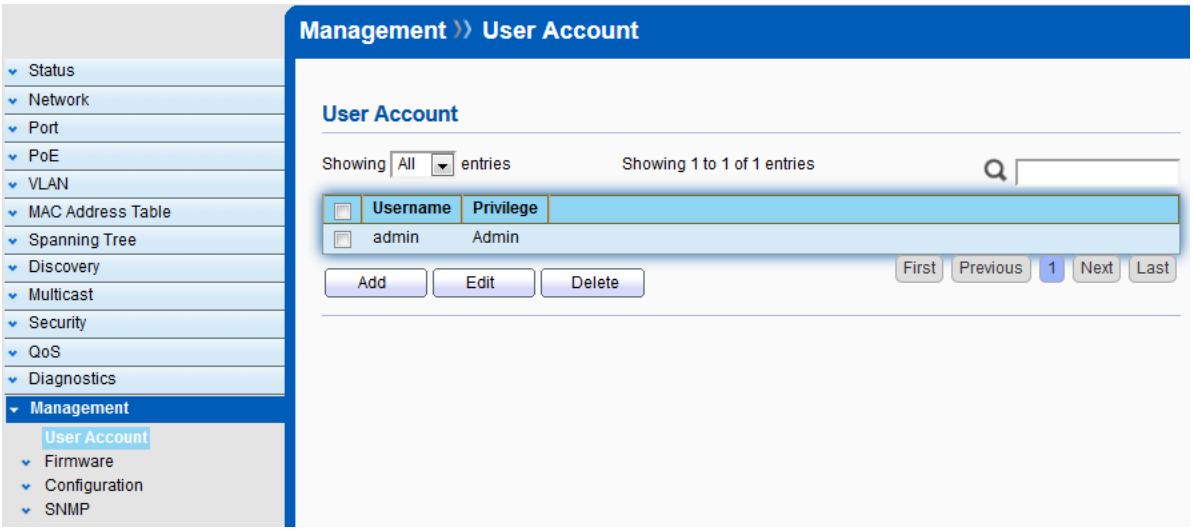
Chapter 15 Management

Use the Management pages to configure setting for the switch management features.

15.1 User Account

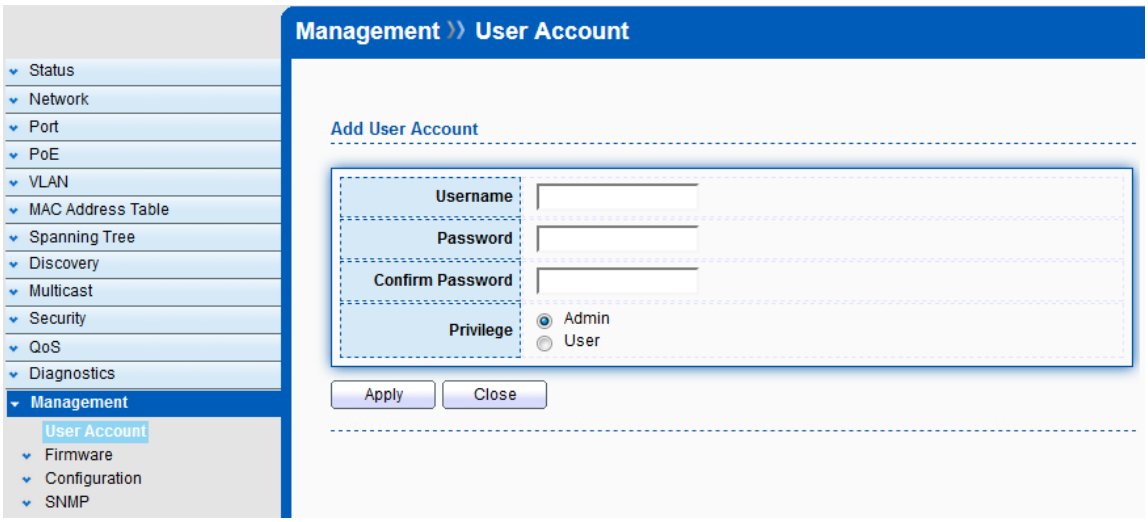
Click **Management** > **User Account**
To display User Account web page.

The default username/password is admin/admin. And default account is not able to be deleted.
Use this page to add additional users that are permitted to manage the switch or to change the passwords of existing users.



Field	Description
Username	User name of the account.
Privilege	Select privilege level for new account. **Admin**: Allow to change switch settings. Privilege value equals to 15. **User**: See switch settings only. Not allow to change it. Privilege level equals to 1.

Click "**Add**" or "**Edit**" to add/edit User Account.



Field	Description
Username	User name of the account.
Password	Set password of the account.
Confirm Password	Set the same password of the account as in “Password” field
Privilege	Select privilege level for new account. **Admin**: Allow to change switch settings. Privilege value equals to 15. **User**: See switch settings only. Not allow to change it. Privilege level equals to 1.

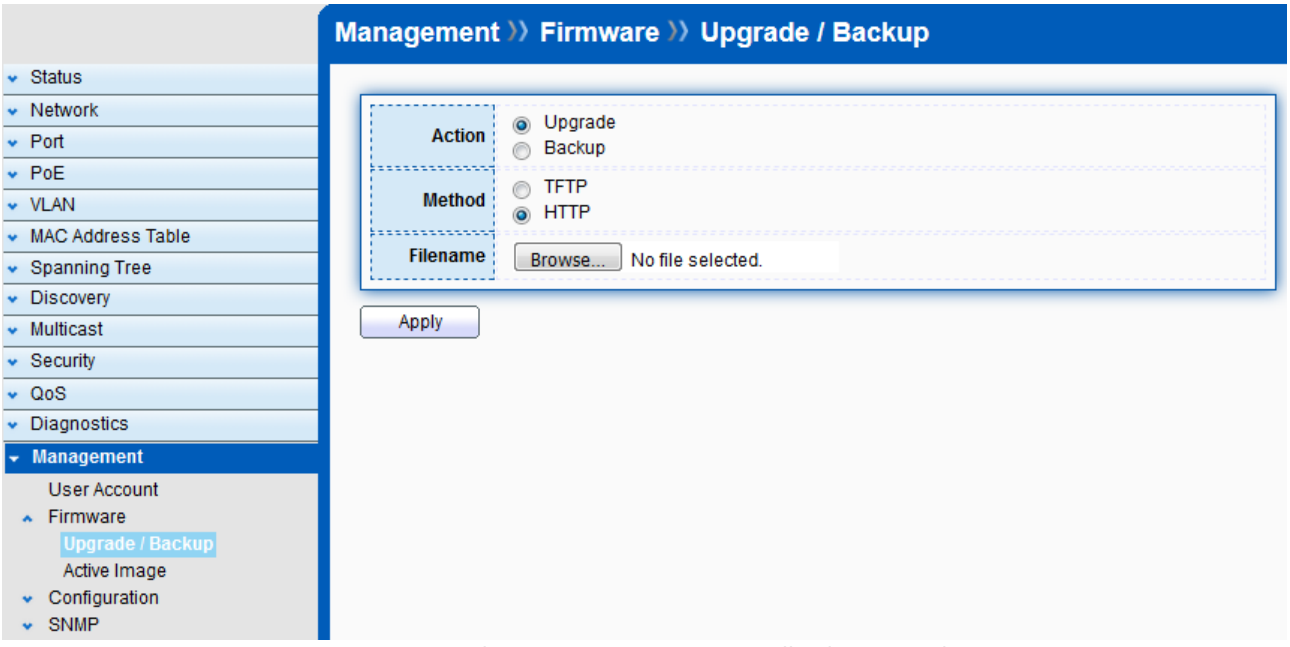
15.2 Firmware

15.2.1 Upgrade / Backup

Click **Management** > **Firmware** > **Upgrade/Backup**

To display the Firmware Upgrade or Backup web page.

This page allow user to upgrade or backup firmware image through HTTP or TFTP server.



Upgrade Firmware through HTTP

Field	Description
Action	Firmware operations **Upgrade**: Upgrade firmware from remote host to DUT. **Backup**: Backup firmware image from DUT to remote host.
Method	Firmware upgrade/backup method **TFTP**: Using TFTP to upgrade/backup firmware. **HTTP**: Using WEB browser to upgrade/backup firmware.
Filename	Use browser to upgrade firmware, you should select firmware image file on your host PC.

Upgrade Firmware through TFTP.

Field	Description
Action	Firmware operations **Upgrade**: Upgrade firmware from remote host to DUT. **Backup**: Backup firmware image from DUT to remote host.
Method	Firmware upgrade/backup method **TFTP**: Using TFTP to upgrade/backup firmware. **HTTP**: Using WEB browser to upgrade/backup firmware.
Address Type	Specify TFTP server address type **Hostname**: Use domain name as server address. **IPv4**: Use IPv4 as server address **IPv6**: Use IPv6 as server address
Server Address	Specify TFTP server address.
Filename	Firmware image file name on remote TFTP server

Backup Firmware through HTTP

Field	Description
Action	Firmware operations **Upgrade**: Upgrade firmware from remote host to DUT. **Backup**: Backup firmware image from DUT to remote host.
Method	Firmware upgrade/backup method **TFTP**: Using TFTP to upgrade/backup firmware. **HTTP**: Using WEB browser to upgrade/backup firmware.
Firmware	Select which image file to backup. **Image0**: backup image0. **Image1**: backup image1.

Backup Firmware through TFTP

Field	Description
Action	Firmware operations **Upgrade**: Upgrade firmware from remote host to DUT. **Backup**: Backup firmware image from DUT to remote host.
Method	Firmware upgrade/backup method **TFTP**: Using TFTP to upgrade/backup firmware. **HTTP**: Using WEB browser to upgrade/backup firmware.
Firmware	Select which image file to backup. **Image0**: backup image0. **Image1**: backup image1.

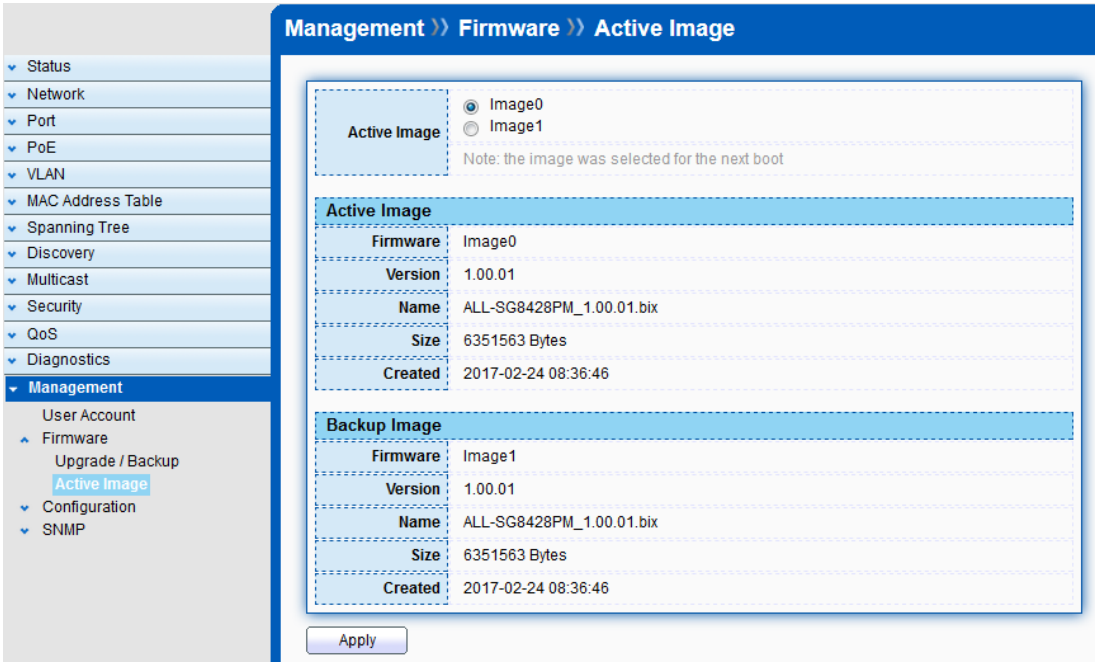
Address Type	Specify TFTP server address type **Hostname**: Use domain name as server address **IPv4**: Use IPv4 as server address **IPv6**: Use IPv6 as server address
Server Address	Specify TFPT server address
Filename	File name saved on remote TFTP server

15.2.2 Active Image

Click **Management** > **Firmware** > **Active Image**

To display the current firmware information.

This page allows user to select firmware image.



Field	Description
Active Image	Select the image to active.
Active/Backup Image	**Firmware**: Image0 or Image1 **Version**: The firmware version of this image. **Name**: The filename of this image. **Size**: The file size of this image. **Created**: The date when this image created.

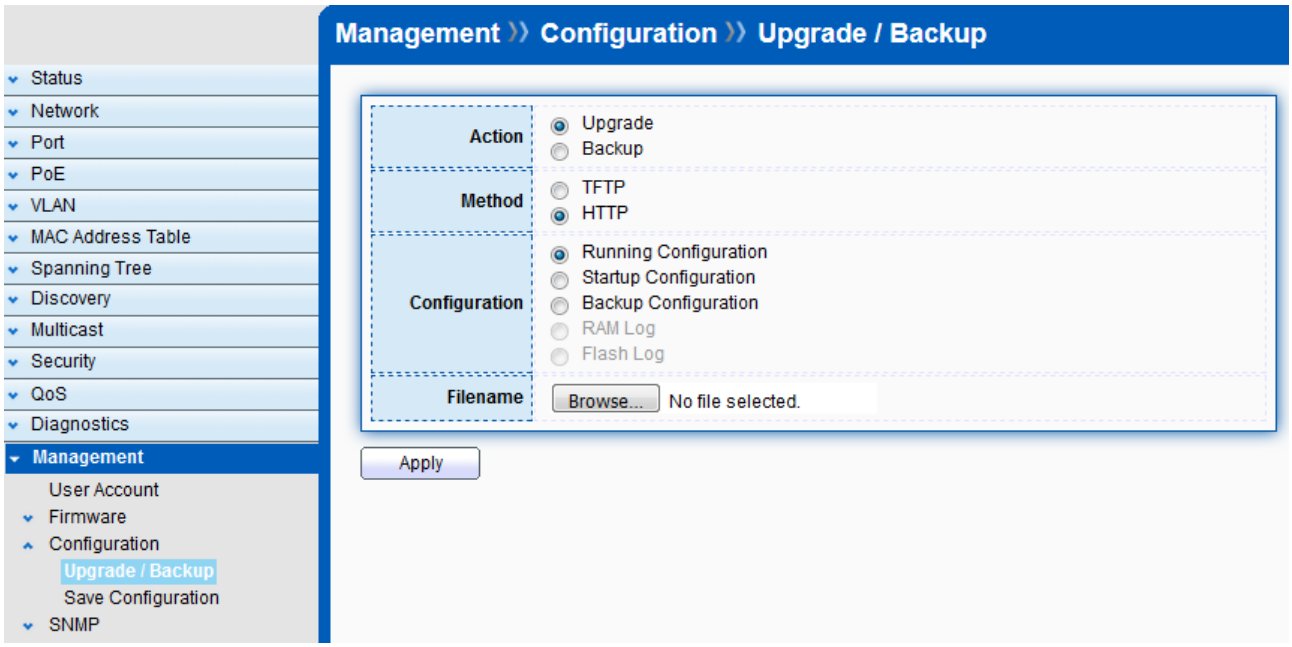
15.3 Configuration

15.3.1 Upgrade / Backup

Click **Management** > **Configuration** > **Upgrade/Backup**

To display the Configuration Upgrade or Backup web page.

This page allow user to upgrade or backup configuration file through HTTP or TFPT server.



Upgrade Configuration through HTTP

Field	Description
Action	Configuration operations **Upgrade**: Upgrade Configuration from remote host to DUT. **Backup**: Backup Configuration image from DUT to remote host.
Method	Configuration upgrade/backup method **TFTP**: Using TFTP to upgrade/backup Configuration. **HTTP**: Using WEB browser to upgrade/backup Configuration.
Configuration	Configuration types **Running Configuration**: Merge to current running configuration file. **Startup Configuration**: Replace the startup configuration file. **Backup Configuration**: Replace the backup configuration file.
Filename	Use browser to upgrade Configuration, you should select Configuration image file on your host PC.

Upgrade Configuration through TFTP.

Field	Description
Action	Configuration operations **Upgrade**: Upgrade Configuration from remote host to DUT. **Backup**: Backup Configuration image from DUT to remote host.
Method	Configuration upgrade/backup method **TFTP**: Using TFTP to upgrade/backup Configuration. **HTTP**: Using WEB browser to upgrade/backup Configuration.
Configuration	Configuration types **Running Configuration**: Merge to current running configuration file. **Startup Configuration**: Replace the startup configuration file. **Backup Configuration**: Replace the backup configuration file.
Address Type	Specify TFTP server address type **Hostname**: Use domain name as server address. **IPv4**: Use IPv4 as server address **IPv6**: Use IPv6 as server address

Server Address	Specify TFTP server address.
Filename	Configuration image file name on remote TFTP server

Backup Configuration through HTTP

Field	Description
Action	Configuration operations **Upgrade**: Upgrade Configuration from remote host to DUT. **Backup**: Backup Configuration image from DUT to remote host.
Method	Configuration upgrade/backup method **TFTP**: Using TFTP to upgrade/backup Configuration. **HTTP**: Using WEB browser to upgrade/backup Configuration.
Configuration	Configuration types **Running Configuration**: Merge to current running configuration file. **Startup Configuration**: Backup the startup configuration file. **Backup Configuration**: Backup the backup configuration file. **RAM Log**: Backup log file stored in RAM **Flash Log**: Backup log files store in Flash.

Backup Configuration through TFTP.

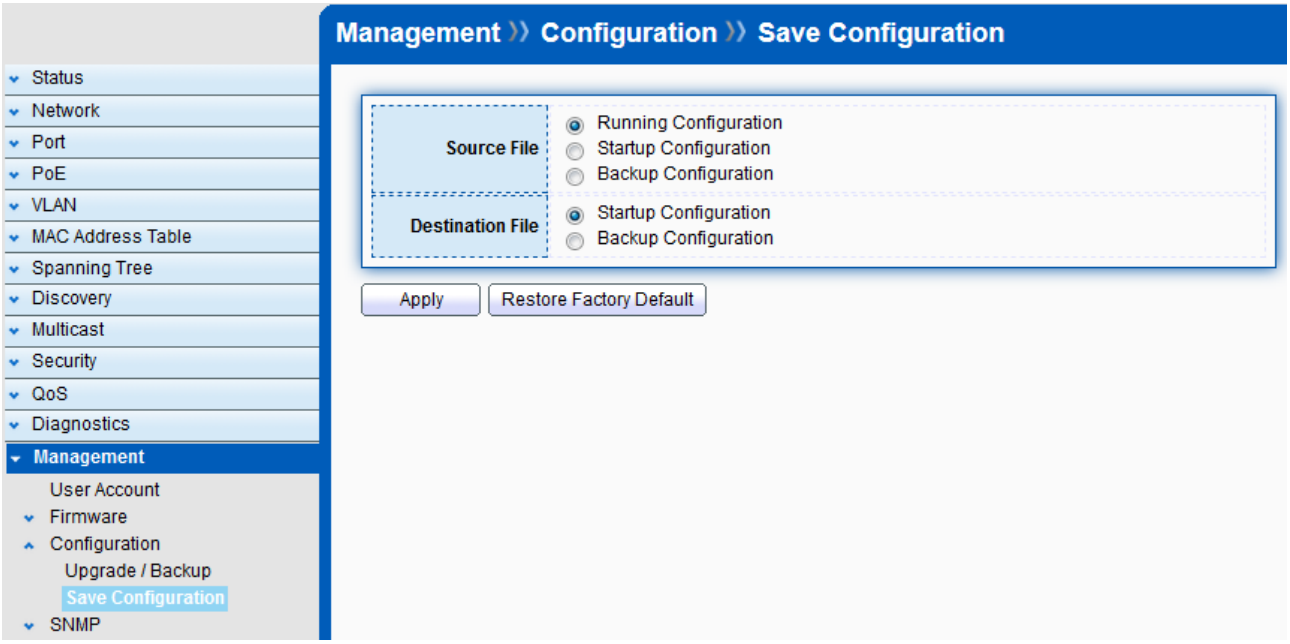
Field	Description
Action	Configuration operations **Upgrade**: Upgrade Configuration from remote host to DUT. **Backup**: Backup Configuration image from DUT to remote host.
Method	Configuration upgrade/backup method **TFTP**: Using TFTP to upgrade/backup Configuration. **HTTP**: Using WEB browser to upgrade/backup Configuration.
Configuration	Configuration types **Running Configuration**: Merge to current running configuration file. **Startup Configuration**: Backup the startup configuration file. **Backup Configuration**: Backup the backup configuration file. **RAM Log**: Backup log file stored in RAM **Flash Log**: Backup log files store in Flash.
Address Type	Specify TFTP server address type **Hostname**: Use domain name as server address. **IPv4**: Use IPv4 as server address **IPv6**: Use IPv6 as server address
Server Address	Specify TFTP server address.
Filename	Configuration image file name on remote TFTP server

15.3.2 Save Configuration

Click **Management** > **Configuration** > **Save Configuration**

To display the Save Configuration web page.

This page allow user to manage configuration file saved on DUT and click “Restore Factory Default” button to restore factory defaults.



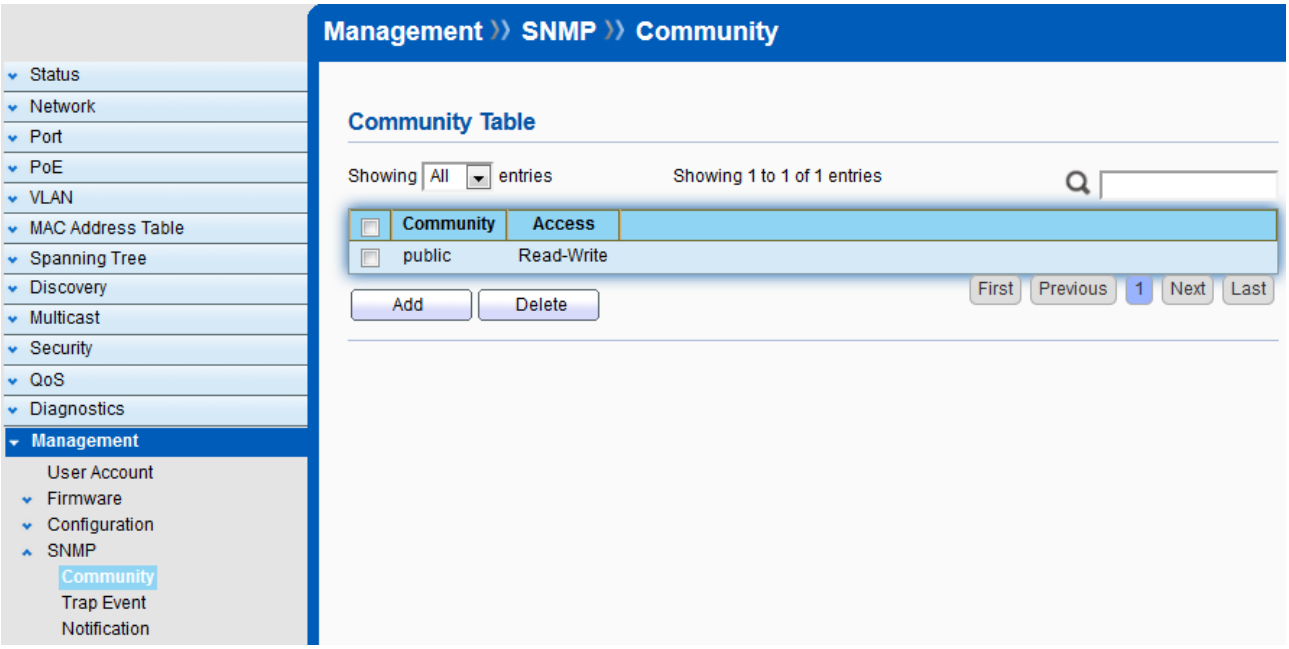
Field	Description
Source File	Source file types **Running Configuration**: Copy running configuration file to destination. **Startup Configuration**: Copy startup configuration file to destination. Backup Configuration: Copy backup configuration file to destination.
Destination File	Destination file **Startup Configuration**: Save file as startup configuration.

15.4 SNMP

15.4.1 Community

Click **Management** > **SNMP** > **Community**

To display and configure the SNMP community settings.

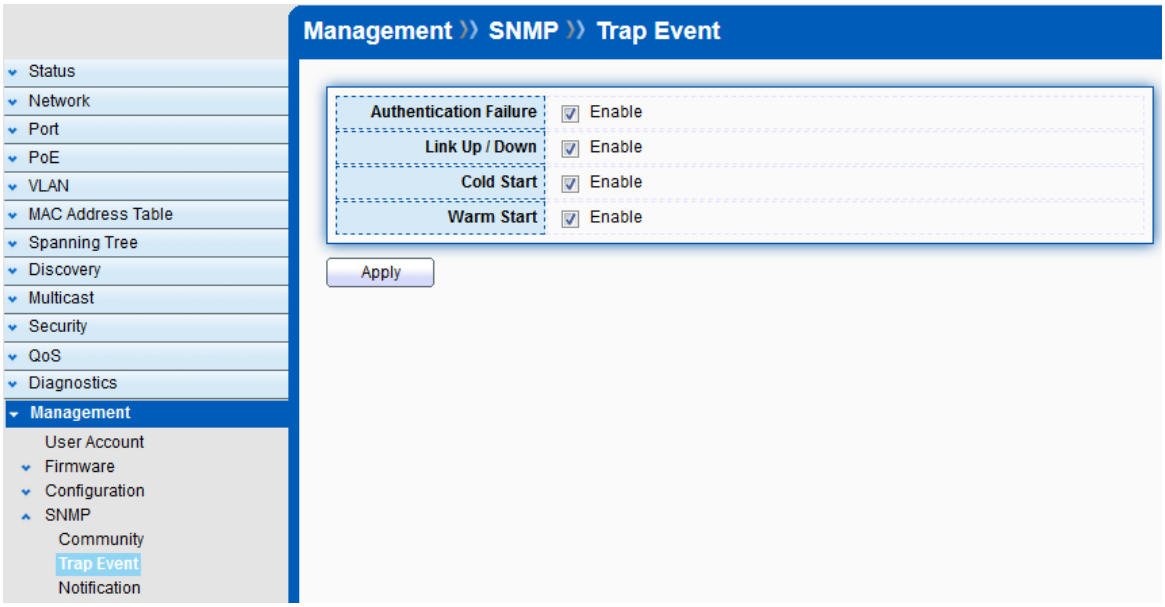


Field	Description
Community	The SNMP community name. Its maximum length is 20 characters.
Access Right	SNMP access mode **Read-Only**: Read only **Read-Write**: Read and Write.

15.4.2 Trap Event

Click **Management** > **SNMP** > **Trap Event**

To display and configure the SNMP trap event.



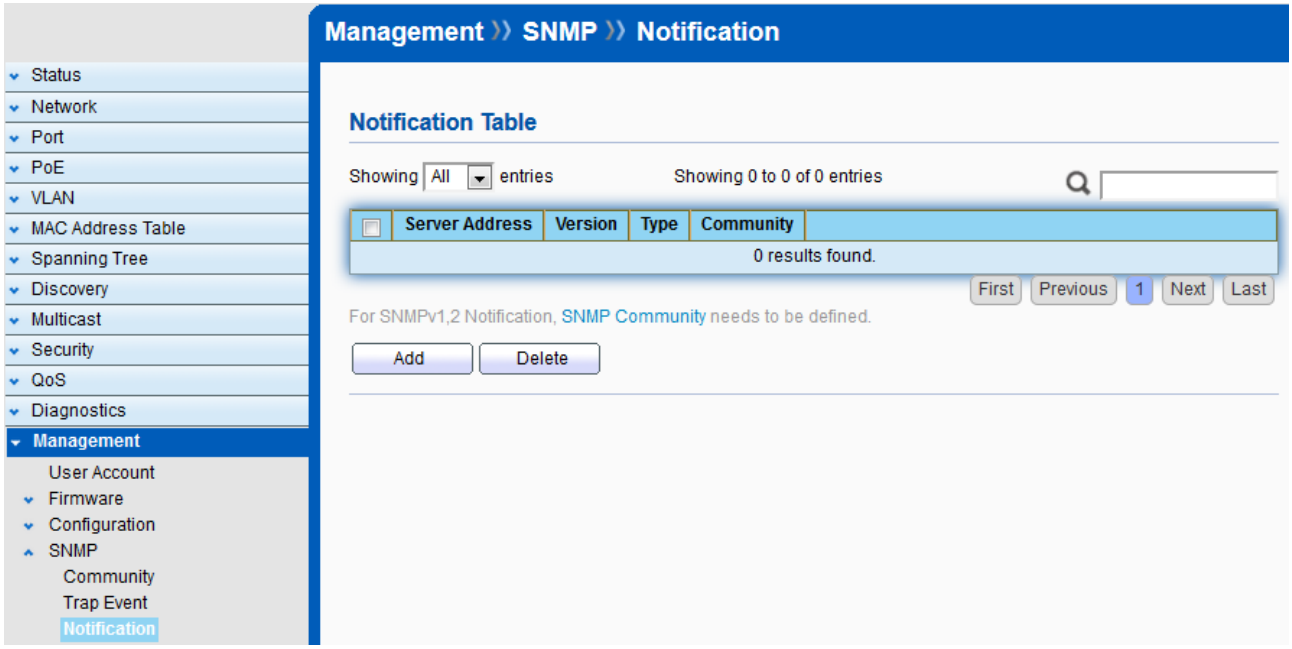
Field	Description
Authentication Failure	SNMP authentication failure trap, when community not match or user authentication password not match.
Link Up/Down	Port link up or down trap.

Cold Start	Device reboot configure by user trap.
Warm Start	Device reboot by power down trap

15.4.3 Notification

Click **Management** > **SNMP** > **Notification**

To configure the hosts to receive SNMP v1/v2 notification.



Field	Description
Server Address	IP address or the hostname of the SNMP trap recipients.
Version	Specify SNMP notification version **SNMPv1**: SNMP Version 1 notification **SNMPv2**: SNMP Version 2 notification.
Type	Notification Type **Trap**: Send SNMP traps to the host. **Inform**: Send SNMP informs to the host.
Community	SNMP community name for notification.

Product Specifications

Item	Specifications
Network Standards	IEEE 802.3 10BaseT IEEE 802.3u 100BaseTX IEEE 802.ab 1000BaseT IEEE 802.3z 1000BaseSX/LX IEEE 802.3az EEE IEEE 802.3af PoE (15.4W) IEEE 802.3at PoE+(30W) IEEE 802.3x Flow Control IEEE 802.1Q VLAN tag IEEE 802.3ad LACP aggregation IEEE 802.1p class of service, priority protocols
Interface	**I/O ports**: 24x GbE ports, RJ45 4x GbE combo ports, RJ45 + SFP **PoE ports**: Port# 1~ 24, IEEE802.3at, IEEE802.3af

Safety Warnings

For your safety, be sure to read and follow all warning notices and instructions.

- Do not open the device. Opening or removing the device cover can expose you to dangerous high voltage points or other risks. Only qualified service personnel can service the device. Please contact your vendor for further information.
- Do not use your device during a thunderstorm. There may be a risk of electric shock brought about by lightning.
- Do not expose your device to dust or corrosive liquids.
- Do not use this product near water sources.
- Make sure to connect the cables to the correct ports.
- Do not obstruct the ventilation slots on the device.

This Program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this Program; if not, write to the Free Software Foundation, Inc., 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA.

The full text of the GNU General Public License version 2 is included with the software distribution in the file LICENSE.GPLv2

NO WARRANTY

BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Written Offer for Source Code

For binaries that you receive from ALLNET GmbH Computersysteme on physical media or within the download of the offered firmware that are licensed under any version of the GNU General Public License (GPL) or the GNU LGPL, you can receive a complete machine-readable copy of the source code by sending a written request to:

ALLNET GmbH Computersysteme

Maistrasse 2

82110 Germering

Your request should include: (i) the name of the covered binary, (ii) the version number of the ALLNET product containing the covered binary, (iii) your name, (iv) your company name (if applicable) and (v) your return mailing and email address (if available). We may charge you a nominal fee to cover the cost of the media and distribution. Your request must be sent within three (3) years of the date you received the GPL or LGPL covered code. For your convenience, some or all of the source code may also be found at:

http://www.allnet.de/gpl.html

LICENSE.GPLv2

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is

not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".
   Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.
   You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.
2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if

the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c)Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate

your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.
   If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.
   It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.
   This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.
   Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.
10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.
To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.> Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.
This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.
You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA
Also add information on how to contact you by electronic and paper mail. If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.
You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

LICENSE.LGPLv2.1

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.
[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.
This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.
When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.
To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.
We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.
To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.
Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.
Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.
When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.
We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.
For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.
In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.
Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.
The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

   A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

   The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

   "Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

   Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

   You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) The modified work must itself be a software library.

b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

c)You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

   (For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

   These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its

terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.
   Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.
   This option is useful when you wish to copy part of the code of the Library into a program that is not a library.
4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.
   If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.
5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.
   However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.
   When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.
   If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

   You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c)Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

   For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

   It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

    If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

    It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

    This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.> Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library `Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990 Ty Coon, President of Vice

That's all there is to it!
