1.Introduction

1.1 Overview

Thank you for purchasing our managed switch series, whose all software function can be managed, configured and monitored via embedded Web-based (HTML) interface. By a standard browser, you can manage switch at any remote site in the network. Browser as a universal access tool, uses the HTTP protocol to communicate with switch directly.

1.2 Web Management Login

Open installed web browser on your PC, input the switch's IP address like `http://xxx.xxx.xxx.xxx`, then open that URL to login web management.

Note: IP address of switch is 192.168.2.1 by default. So please input <http://192.168.2.1> in browser.

When the login window appears, please enter the default username "admin" with password "admin". Then click OK to login.

Figure1-1 Login Window

Default Username: admin
Default Password: admin

1.3 Web-based User Interface

After entering the username and password, the main screen appears as following Figure1-2.

Figure1-2 Web management Main Page

interface This Main Page interface includes mainly 3 parts. Here is description:

Part	Description
Part 1	Company LOGO; Panel display; Port indicators, including PoE and Link working status; Language selection button; Help document
Part 2	The Main Menu, lets you access all the commands and statistics
Part 3	Main Screen, showing configuration details

The Web agent displays an image of the Managed Switch’s ports. Different colors mean different states, they are illustrated as follows:

: 100Mbps linked; : 1000Mbps linked; : No link

1.4 Main Menu

Using the onboard Web agent, you can define system parameters, manage and control the Managed Switch, and all its ports, or monitor network conditions. Via the Web-Management, the administrator can set up the Managed Switch by selecting the functions those listed in the Main Menu. Following is short description:

- Information & Status** - Users can check switch information and working status under this menu.

Network Admin - Users can check and configure related features of network under this menu.

Port Configure - Users can check and configure specification of ports under this menu.

PoE - Users can check and configure related features of Power-over-Ethernet (PoE) under this menu.

Advanced Configure - Users can check and configure L2 advanced features under this menu.

Security Configure - Users can check and configure security features of the switch under this menu.

2. Network Management

2.1 IP Configuration

Note: IP address of switch is 192.168.2.1 by default, and the default subnet mask is 255.255.255.0(24)

Click "Network Admin" > "IP", screen will shows as:

IP Configuration

Mode: Host

DNS Server 0: No DNS server

DNS Server 1: No DNS server

DNS Server 2: No DNS server

DNS Server 3: No DNS server

DNS Proxy: ☐

IP Interfaces

Figure 2-1 IP Configuration Screen

Following is description detail about IP configuration:

Name	Description
Port Name	Display system's port name
VLAN	VLAN for for access and management of switch
IPv4 DHCP	- If enable, it means that VLAN port start IPv4 DHCP client, to dynamically get IPv4 addresses of the switch. Otherwise, it will use switch's static IP configuration. - Fallback (Seconds), means the waiting time for switch to get dynamic IP address via DHCP. The value of "0" here means never over the time. - Current Lease, means the IP address get from DHCP
IPv4	- Address: static IPv4 address entered by user. - Mask Length: static IPv4 subnet mask entered by user.

Click "Add Interface" to create a new management for VLAN and IP address. Click "Save" to save settings.

Note: The switch only created VLAN1 by default. If user needs to use other VLAN for switch management, please first add VLAN in the VLAN module, and add the relevant port to the VLAN.

2.2 NTP Configuration

NTP is an acronym for Network Time Protocol, a network protocol for synchronizing the clocks of computer systems. You can specify NTP Servers and set GMT Time zone. The NTP Configuration screens will appear after you click "Network Admin" > "NTP".

Figure 2-2 NTP Setting Screen

Configuration object and description is:

Object	Description
Mode	Click drop-down menu to select "Enabled" or "Disabled" SNTP. Enabled: Enable SNTP mode operation. When enabling SNTP mode operation, the agent forwards and transfers SNTP messages between the clients and the server when they are not on the same subnet domain. Disabled: Disable SNTP mode operation.
NTP Sever	After input NTP server IP address, NTP information will be get from that server.

After configuration was set, please click "Save" to save the setting.

2.3 SNMP Configuration

Simple Network Management Protocol (SNMP) is an application layer protocol that facilitates the exchange of management information between network devices. It is part of the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol suite. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth.

This switch support SNMPv1, v2c. Different versions of SNMP provides different security level for management stations and network devices.

In SNMP's v1 and v2c, it uses the "Community String" for user authentication. That string is similar to password function. SNMP application of remote user and SNMP of the Switch must use the same community string. SNMP packets of any unauthorized sites will be ignored (discarded).

"Community String" by default for switch's SNMPv1 and v2c access management is:

1. public – allow authentication management station to read MIB objects.
2. private – allow authentication management station to read, write and edit MIB objects.

Trap

Used by the agent to asynchronously inform the NMS of some event. These events may be very serious, such as reboot (someone accidentally turned off switch), or just general information, such as port status change. In these cases, switch create trap information and send then to receiver or network admin. Typical trap includes authentication failure, networking changes and cold/hot start trap.

MIB

A MIB is a collection of managed objects residing in a virtual information store. Collections of related managed objects are defined in specific MIB modules. Switch uses standard MIB-II information management module.

So, MIB object value can be read by any SNMP web-managed software.

2.3.1 SNMP System Configuration

You can enable or disable the SNMP System Configuration. Its screen will appear after you click "Network Admin" > "SNMP" > "System"

Figure 2-3 SNMP System Setting Screen

Configuration object and description is:

Object	Description
Mode	Enabled or Disable SNMP function
Version	Click drop-down menu to select SNMP v2c or SNMP v1 version
Read Community	Public: allow authentication management station to read MIB objects
Write Community	Private: allow authentication management station to read and write MIB objects.

2.3.2 SNMP Trap Configuration

User can enable or disable SNMP Trap function and set configuration. Click "Network Admin" > "SNMP" > "Trap", then this screen will show as:

2.4 System Log Configuration

User can configure switch's system log, via following screen after click "Network Admin" > "Syslog"

▶ Information & Status
▼ Network Admin

- IP Config
- IP Status
- ▶ DHCP Server
- NTP
- Timezone
- ▶ SNMP
- SysLog

System Log Configuration

Server Mode	Disabled ▼
Server Address	192.168.2.100
Syslog Level	Informational ▼

Figure 2-4 System Log Configuration

Screen Configuration object and description is:

Object	Description
Server Mode	Enabled or Disable SNMP System Log function. If "Enable" is selected, switch will send System Log to defined server.
Server Address	Defined server IP address
Syslog Level	To define level of System Log, including: Info : Information, warnings and errors. Warning : warnings and errors. Error : errors.

3. Port Configure

3.1 Port Configuration

This page is for configuring port specifications of switch. After click "Port Configure" > "Ports", this screen will appear as:

Port Configuration															<button>Refresh</button>
Port	Description	Link	Current	Speed Configured	Adv Fdx	Duplex Hdx	10M	100M	1G	Enable	Flow Control Curr Rx	Curr Tx	Maximum Frame Size	Excessive Collision Mode	Frame Length Check
-				<>									9600	<>	
1		●	1 Gfdx	Auto	☒	☒	☒	☒	☒	☐		X	X	Discard	☐
2		●	Down	Auto	☒	☒	☒	☒	☒	☐		X	X	Discard	☐

4		●	Down	Auto	☒	☒	☒	☒	☒	☐		X	X	Discard	☐
5		●	Down	Auto	☒	☒	☒	☒	☒	☐		X	X		☐
6		●	Down	Auto	☒	☒	☒	☒	☒	☐		X	X		☐

Figure 3-1 Port Configure Screen

Configuration object and description is:

Object	Description
Link	Red color means Link Down, green color means Link Up
Speed	Select the port speed and full / half duplex mode. "Disabled" means that port is disabled. "Auto" meaning in full-duplex (FDX) or half-duplex mode (HDX) (1000mbps always in full-duplex mode) auto negotiate among 10,100,1000Mbps devices. "Auto" setting allows the port to automatically determine the fastest settings for the device connected, and to apply these settings. "1000-X_AMS" means that port is Ethernet/Optical combo port, and optical port is prioritized. Other options are 10M HDX, 10M FDX, 100M HDX, 100M FDX, 1000M FDX, 1000-X.
Flow Control	It is a flow control mechanism for a variety of port configurations. Full-duplex ports use 802.3x flow control, half-duplex ports use backpressure flow control. It is disabled by default. Check to enable flow control.
Maximum Frame Size	It is used to set the maximum frame size for Ethernet. The default setting is 9600, which is to support Jumbo frames.

Click "Save" to store and active settings.

3.2 Link Aggregation

Users can set up multiple links among multiple switches. Link Aggregation, is a method that tie some physical ports together as one logic port, to enlarge bandwidth. This switch supports up to 13 groups Link Aggregation, 2 to 8 port as one group.

Note: If any port in the link aggregation group is disconnected, data packet that sent to disconnected port will share load with other connected port in this aggregation group.

3.2.1 Static Aggregation

In this page, user can configure static aggregation of switch's ports. After click the menu "Port Configure" > "Aggregation" > "Static", followed window will appear for making static aggregation settings.

- ▶ Information & Status
- ▶ Network Admin

Figure 3-2 Port Static Aggregation Configuration

Screen Configuration object and description is:

Object	Description
Aggregation Mode Configuration	This parameter is flow hash algorithm among LAG (Link Aggregated Group) ports.
Group ID	Static aggregation group ID
Port Members	This switch supports up to 13 groups Link Aggregation, 2 to 8 port as one group.

Click "Save" to store and active settings.

Note: It allows a maximum of 8 ports to be aggregated as 1 static trunk group at the same time.

3.2.2 LACP Aggregation

Link Aggregation Control Protocol (LACP) provides a standardized means for exchanging information between Partner Systems that require high-speed redundant links. Link aggregation lets you group up to eight consecutive ports into a single dedicated connection. This feature can expand bandwidth to a device on the network. LACP operation requires full-duplex mode. For more detailed information, refer to the IEEE 802.3ad standard.

Users can create dynamic aggregation group for switches. After click "Port Configure" > "Aggregation" > "LACP", users can set LACP configuration in followed screen.

Port	LACP Enabled	Key	Role	Timeout	Prio
*	☐	<>	<>	<>	32768
1	☐	Auto	Active	Fast	32768
2	☐	Auto	Active	Fast	32768

4	☐	Auto	Active	Fast	32768
5	☐	Auto	Active	Fast	32768
6	☐	Auto	Active	Fast	32768

Save Reset

Figure 3-3 LACP Configuration

Screen Configuration object and description is:

Object	Description
LACP	Enable or disable LACP function of that port.
Key	The Key value incurred by the port, range 1-65535. The Auto setting will set the key as appropriate by the physical link speed, 10Mb = 1, 100Mb = 2, 1Gb = 3. Using the Specific setting, a user-defined value can be entered. Ports with the same Key value can participate in the same aggregation group, while ports with different keys cannot.
Role	The Role shows the LACP activity status. The Active will transmit LACP packets each second, while Passive will wait for a LACP packet from a partner (speak if spoken to).
Timeout	The Timeout controls the period between BPDU transmissions. Fast will transmit LACP packets each second, while Slow will wait for 30 seconds before sending a LACP packet.
Prio	The Prio controls the priority of the port. If the LACP partner wants to form a larger group than is supported by this device then this parameter will control which ports will be active and which ports will be in a backup role. Lower number means greater priority.

Click "Save" to store and active settings.

3.3 Port Mirroring

Configure port Mirroring on this page. This function provides monitoring of network traffic that forwards a copy of each incoming or outgoing packet from one port of a network switch to another port where the packet can be studied. It enables the manager to keep close track of switch performance and alter it if necessary.

To configure Mirror settings, please click "Port Configure" > "Mirroring" . Then followed screen will appear as:

▶ Information & Status

▶ Network Admin

▼ Port Configure

- Ports
- ▶ Aggregation
- Mirroring
- Thermal Protection
- Green Ethernet

SaveReset

Figure 3-4 Mirror Configuration

Screen Configuration object and description is:

Object	Description
Port mirror to	Frames from ports that have either source (rx) or destination (tx) mirroring enabled are mirrored on this port. Disabled disables mirroring.
Mode	Select source port mirror mode. Rx only Frames received on this port are mirrored on the mirror port. Frames transmitted are not mirrored. Tx only Frames transmitted on this port are mirrored on the mirror port. Frames received are not mirrored. Disabled Neither frames transmitted nor frames received are mirrored. Enabled Frames received and frames transmitted are mirrored on the mirror port. Note: For a given port, a frame is only transmitted once. It is therefore not possible to mirror mirror port Tx frames. Because of this, mode for the selected mirror port is limited to Disabled or Rx only.

Click "Save" to store and active settings.

Note: You can not set fast speed port(s) mirror to a low speed port. For example, there is problem if you try to mirror 100Mbps port(s) to a 10 Mbps port. So destination port should has equal or higher speed comparing to source port. Besides, source port and destination port should not be same one.

3.4 Thermal Protection Configuration

Thermal protection is for detecting and protecting working switch. When switch detected port temperature is higher that defined temperature, system will disable the port, to protect switch itself.

After click "Port Configure" > "Thermal Protection", followed screen will appear as:

Thermal Protection Configuration

Temperature settings for groups

Group	Temperature

Figure 3-5 Thermal Protection Configuration Screen

Configuration object and description is:

Object	Description
Temperature settings for priority groups	This switch support 4 Thermal Protection priority groups, and each of them can have a defined temperature for protection.
Port priorities	Define which priority group that port belong to.

Click "Save" to store and active settings.

Note: By default, all ports of switch are belong to Priority Group 0, with protected temperature 225 degree C.

4. PoE Configuration

Power-over-Ethernet (PoE), means Ethernet network power supply via 100BASE-TX, 1000BASE-T. Its maximum power distance is 100 meters. By PoE power system, based on Ethernet wiring network of UTP Cat5 or higher Cable, it can give power to IP camera, VoIP phone, wireless AP, as well as transmit data. So there is no need to concern about the power wire building, reducing the cost of networking building.

PoE power supply system has unified standard, IEEE 802.3af and 802.3at. So devices from different manufacturers have no problem in general usage, as long as they are complied with these standards.

PD, it is defined as powered device in the PoE Power Supply System, primarily including IP camera, wireless AP, network VoIP phone, and other IP-based terminal equipment.

The whole process of PoE:

1. Detection: At beginning, PSE device output a very small voltage, to detect and judge if its linked PD is IEEE802.3af / IEEE802.3at compliant device. Only if detected that PD is a standard compliant device, then it will go to next step.
2. PD Classification: After detected PDs, PSE will classify them and recognize what is the power that PD required.
3. Power up: When above 2 steps finished, PSE start feeding required power for PD, with 44~57VDC output voltage.
4. Power supply: PSE provides stable 44~57V DC to PDs, and auto feeding power as requirement of PDs. Maximum power of single PoE port for IEEE 802.3af devices: 15.4W; Maximum power of single PoE port for IEEE 802.3at devices: 25.5W.
5. Disconnection: If PD is disconnected or user disable PoE from management software, PSE will quickly(300-400ms) stop powering PD.

In any moment of PSE powering PD process, PSE will stop working and then restart from step1 if abnormal situation happens, such as PD Short circuit, power consumption is higher than feeding power, and so on.

4.1 PoE Setting

After click "PoE"> "PoE Setting", user can make PoE settings in followed screen:

Figure 4-1 PoE Setting Screen

Configuration object and description is:

Object	Description
Reserved Power determined by	This switch supports 2 modes for reserved power determination. Auto: Switch automatically assigned maximum power of switch port according to detected PD class. About PD Class, please refer to the 802.3af / 802.3at definition. Manual: Maximum reserved power of the port is customize by the user.
Power Management Mode	This switch supports 2 modes for Power Management. 1. Actual Consumption: In this mode, when the actual power consumption of all the ports exceeds the switch's power budget, the lowest priority port will be shut down. If all ports have the same priority, then the maximum port number would be shut down. 2. Reserved Power: In this mode, when the reserved power consumption of all the ports exceeds the switch's power budget, the port that connect to new PD will not be enabled.
Primary Power Supply [W]	Users can set the maximum primary power of the whole switch. Default setting is 370W.
PoE Mode	This switch support 802.3af (PoE) and 802.3at(PoE+) mode. Default setting is 802.3at.
Priority	Define the priority of the PoE port. Priority from low to high is Low, High, Critical.
Maximum Power (W)	It is for define port's maximum Power when user set Manual as reserved power determination mode.

Click "Save" to store and active settings.

4.2 PoE Status

In this page, user can check and look PoE status of all ports, after click "PoE"> "PoE Status".

5. Advanced Configure

5.1 VLAN

VLAN (Virtual Local Area Network) logically divide one LAN (Local Area Network) into a plurality of subsets, and each subset will form their own broadcast area network. In short, VLAN is a communication technology that logically divide one physical LAN into multiple broadcast area network (multiple VLAN). Hosts within a VLAN can communicate directly. But VLAN groups can not directly communicate with each other. So it will limit the broadcast packets within a VLAN. Since it can not directly access between VLAN groups, thus it improves network security.

Click "Advanced Configure"> "VLANs" to see 802.1Q VLAN configuration screen as following:

Global VLAN Configuration

Allowed Access VLANs: 1

Ethertype for Custom S-ports: 88A8

Figure 5-1 802.1Q VLAN Configuration Screen

Configuration object and description is:

Object	Description
Allowed VLANs	Here displays created VLAN ID. It is 1 by default. If you want to create new VLAN, just need to add VLAN ID here.
Ethertype for Custom S-ports	This field specifies the ethertype/TPID (specified in hexadecimal) used for Custom S- ports. The setting is in force for all ports whose Port Type is set to S-Custom-Port.
Mode	The port mode (default is Access) determines the fundamental behavior of the port in question. A port can be in one of three modes as described below. Whenever a particular mode is selected, the remaining fields in that row will be either grayed out or made changeable depending on the mode in question. Grayed out fields show the value that the port will get when the mode is applied. Access: Access ports are normally used to connect to end stations. Access ports have the following characteristics: • Member of exactly one VLAN, the Port VLAN (a.k.a. Access VLAN), which by default is 1 • Accepts untagged and C-tagged frames

	- Discards all frames that are not classified to the Access VLAN - On egress all frames classified to the Access VLAN are transmitted untagged. Other (dynamically added VLANs) are transmitted tagged <u>Trunk:</u> Trunk ports can carry traffic on multiple VLANs simultaneously, and are normally used to connect to other switches. Trunk ports have the following characteristics: - By default, a trunk port is member of all VLANs (1-4094) - The VLANs that a trunk port is member of may be limited by the use of Allowed VLANs - Frames classified to a VLAN that the port is not a member of are discarded - By default, all frames but frames classified to the Port VLAN (a.k.a. Native VLAN) get tagged on egress. Frames classified to the Port VLAN do not get C- tagged on egress - Egress tagging can be changed to tag all frames, in which case only tagged frames are accepted on ingress <u>Hybrid:</u> Hybrid ports resemble trunk ports in many ways, but adds additional port configuration features. In addition to the characteristics described for trunk ports, hybrid ports have these abilities: - Can be configured to be VLAN tag unaware, C-tag aware, S-tag aware, or S- custom-tag aware - Ingress filtering can be controlled - Ingress acceptance of frames and configuration of egress tagging can be configured independently
Port VLAN	Determines the port's VLAN ID (a.k.a. PVID). Allowed VLANs are in the range 1 through 4094, default being 1. On ingress, frames get classified to the Port VLAN if the port is configured as VLAN unaware, the frame is untagged, or VLAN awareness is enabled on the port, but the frame is priority tagged (VLAN ID = 0). On egress, frames classified to the Port VLAN do not get tagged if Egress Tagging configuration is set to untag Port VLAN. The Port VLAN is called an "Access VLAN" for ports in Access mode and Native VLAN for ports in Trunk or Hybrid mode.
Port Type	Ports in hybrid mode allow for changing the port type, that is, whether a frame's VLAN tag is used to classify the frame on ingress to a particular VLAN, and if so, which TPID it reacts on. Likewise, on egress, the Port Type determines the TPID of the tag, if a tag is required. <u>Unaware:</u> On ingress, all frames, whether carrying a VLAN tag or not, get classified to the Port VLAN, and possible tags are not removed on egress. <u>C-Port:</u> On ingress, frames with a VLAN tag with TPID = 0x8100 get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with a C-tag. <u>S-Port:</u> On ingress, frames with a VLAN tag with TPID = 0x8100 or 0x88A8 get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with an S-tag.

	<u>S-Custom-Port:</u> On ingress, frames with a VLAN tag with a TPID = 0x8100 or equal to the Ethertype configured for Custom-S ports get classified to the VLAN ID embedded in the tag. If a frame is untagged or priority tagged, the frame gets classified to the Port VLAN. If frames must be tagged on egress, they will be tagged with the custom S-tag.
Ingress Filter	Hybrid ports allow for changing ingress filtering. Access and Trunk ports always have ingress filtering enabled. If ingress filtering is enabled (checkbox is checked), frames classified to a VLAN that the port is not a member of get discarded. If ingress filtering is disabled, frames classified to a VLAN that the port is not a member of are accepted and forwarded to the switch engine. However, the port will never transmit frames classified to VLANs that it is not a member of.
Ingress Acceptance	Hybrid ports allow for changing the type of frames that are accepted on ingress. <u>Tagged and Untagged</u> Both tagged and untagged frames are accepted. <u>Tagged Only</u> Only tagged frames are accepted on ingress. Untagged frames are discarded. <u>Untagged Only</u> Only untagged frames are accepted on ingress. Tagged frames are discarded.
Egress Tagging	Ports in Trunk and Hybrid mode may control the tagging of frames on egress. <u>Untag Port VLAN</u> Frames classified to the Port VLAN are transmitted untagged. Other frames are transmitted with the relevant tag. <u>Tag All</u> All frames, whether classified to the Port VLAN or not, are transmitted with a tag. <u>Untag All</u> All frames, whether classified to the Port VLAN or not, are transmitted without a tag. This option is only available for ports in Hybrid mode.
Allowed VLANs	Ports in Trunk and Hybrid mode may control which VLANs they are allowed to become members of. Access ports can only be member of one VLAN, the Access VLAN. The field's syntax is identical to the syntax used in the Enabled VLANs field. By default, a Trunk or Hybrid port will become member of all VLANs, and is therefore set to 1-4094. The field may be left empty, which means that the port will not become member of any VLANs.
Forbidden VLANs	A port may be configured to never be member of one or more VLANs. This is particularly useful when dynamic VLAN protocols like MVRP and GVRP must be prevented from dynamically adding ports to VLANs. The trick is to mark such VLANs as forbidden on the port in question. The syntax is identical to the syntax used in the Enabled VLANs field. By default, the field is left blank, which means that the port may become a member of all possible VLANs.

Click "Save" to store and active settings.

5.2 Port Isolation

Port isolation is for limiting data between ports. It is similar to VLAN, but more stricter.

5.2.1Port Group

This switch support port groups. Members of port group can forward date.

Note: port can belong to to multiple port groups. Data can be forwarded among any port that belong to one port group.

After Click "Advanced Configure" > "Port Isolation" > "Port Group", then followed screen will appear for making port group configuration.

Figure 5-2 Port Group Configuration

Screen Configuration object and description is:

Object	Description
Port Members	Check the corresponding box to set them as one port

Click "Add New Port Group" to create a new port group, "Delete" to remove corresponding port group, and "Save" to store and active settings.

5.2.2Port Isolation

After Click "Advanced Configure" > "Port Isolation" > "Port Isolation", then followed screen will appear for making port isolation configuration.

Click "Save" to store and active settings.

5.3 STP

The Spanning Tree Protocol (STP) can be used to detect and disable network loops, and to provide backup links between switches, bridges or routers. This allows the switch to interact with other bridging devices in your network to ensure that only one route exists between any two stations on the network, and provide backup links which automatically take over when a primary link goes down.

5.3.1 STP Bridge Settings

This page allows you to configure port STP settings. After Click "Advanced Configure" > "Spanning Tree" > "Bridge Settings", followed screen will appear.

STP Bridge Configuration

Basic Settings

Protocol Version: RSTP

Bridge Priority: 32768

Hello Time: 2

Forward Delay: 15

Figure 5-4 Spanning Tree Configuration

Screen Configuration object and description is:

Object	Description
Protocol Version	Click drop-down menu to select STP protocol version, including: STP - Spanning Tree Protocol (IEEE802.1D); RSTP - Rapid Spanning Tree Protocol (IEEE802.1w)
Bridge Priority	Controls the bridge priority. Lower numeric values have better priority. The bridge priority plus the MSTI instance number, concatenated with the 6-byte MAC address of the switch forms a <i>Bridge Identifier</i> .
Forward Delay (4-30)	Forward Delay setting range is from 4 to 30 seconds. Default value is 15 seconds.
Max Age (6-40)	The maximum age of the information transmitted by the Bridge when it is the Root Bridge. Valid values are in the range 6 to 40 seconds. Default value is 20 .
Maximum Hop Count (6-40)	This defines the initial value of remaining Hops for MSTI information generated at the boundary of an MSTI region. It defines how many bridges a root bridge can distribute its BPDU information. Valid values are in the range 6 to 40 hops.
Transmit Hold Count (1- 10)	The number of BPDU's a bridge port can send per second. When exceeded, transmission of the next BPDU will be delayed. Valid values are in the range 1 to 10 BPDU's per second. Default value is 6.

Click "Save" to store and active settings.

5.3.2 STP Bridge Port

After Click "Advanced Configure" > "Spanning Tree" > "Bridge Ports", followed screen will appear.

Figure 5-5 STP Configuration Screen

Configuration object and description is:

Object	Description
STP Enabled	Check to enable STP function.
Path Cost(0=Auto)	Controls the path cost incurred by the port. The Auto setting will set the path cost as appropriate by the physical link speed, using the 802.1D recommended values. Using the Specific setting, a user-defined value can be entered. The path cost is used when establishing the active topology of the network. Lower path cost ports are chosen as forwarding ports in favour of higher path cost ports. Valid values are in the range 1 to 200000000.
Priority	Controls the port priority. This can be used to control priority of ports having identical port cost. (See above).
Auto Edge	Check box to set corresponding port as Auto Edge.
Restricted Role	Check box to set corresponding port as Restricted Role
Restricted TCN	Check box to set corresponding port as Restricted TCN
BPDU Guide	Check box to enable BPDU Guide. So when port receives BPDU reception, it will turn to Disable (Shut Down) status.
Point-to-point	Controls whether the port connects to a point-to-point LAN rather than a shared medium. This can be automatically determined, or forced either true or false. Transition to the forwarding state is faster for point-to-point LANs than for shared media. (This applies to physical ports only. Aggregations are always forced Point2Point.

Click "Save" to store and active settings.

5.4 MAC Address Table

This page allows you to configure Mac address table settings. After Click "Advanced Configure" > "Mac Table", followed screen will appear.

The screenshot displays the 'MAC Address Table Configuration' page. On the left, a blue sidebar contains a navigation menu with 'Advanced Configure' expanded, showing 'MAC Table' as the selected option. The main content area has a title 'MAC Address Table Configuration' and three sections:

- Aging Configuration:** Includes a checkbox for 'Disable Automatic Aging' (unchecked) and a text input for 'Aging Time' set to '300' seconds.
- MAC Table Learning:** Features a table titled 'Port Members' with 6 columns. Each column has three radio buttons for 'Auto', 'Disable', and 'Secure'. The 'Auto' radio button is selected for all ports.
- Static MAC Table Configuration:** Includes a table with columns 'Delete', 'VLAN ID', 'MAC Address', and 'Port Members' (1-6). Below the table are buttons for 'Add New Static Entry', 'Save', and 'Reset'.

Figure 5-6 MAC Address Table Configuration

Screen Configuration object and description is:

Object	Description
Disable Automatic Aging	If the box is checked, then the automatic aging function is disabled.
Aging Time	The time after which a learned entry is discarded. Range: 10-1000000 seconds; Default: 300 seconds.
MAC Table Learning	This switch supports 3 types for MAC Table Learning 1. Auto: port will auto learn Mac address. 2. Disable: port will NOT learn MAC address. 3. Secure: port only forward data of configured static MAC address.
Static MAC Table Configuration	The static entries in the MAC table are shown in this table. Click "Add New Static Entry" to create a new record.

Click "Save" to store and active settings.

5.5 IGMP Snooping

Internet Group Management Protocol (IGMP) lets host and routers share information about multicast groups memberships. IGMP snooping is a switch feature that monitors the exchange of IGMP messages and copies them to the CPU for feature processing. The overall purpose of IGMP Snooping is to limit the forwarding of multicast frames to only ports that are a member of the multicast group.

5.5.1 Basic Configuration

After Click "Advanced Configure" > "IGMP Snooping" > "Basic Configuration", followed screen will appear.

Unregistered IPMCv4 Flooding Enabled	Check the box to enable unregistered IPMCv4 Flooding
Router Port	Specify which ports act as router ports. A router port is a port on the Ethernet switch that leads towards the Layer 3 multicast device or IGMP querier . If an aggregation member port is selected as a router port, the whole aggregation will act as a router port.
Fast Leave	Fast leave performs deleting MAC forward entry immediately upon receiving message for group de-registration

Click "Save" to store and active settings.

5.5.2IGMP Snooping VLAN Configuration

After Click "Advanced Configure" > "IGMP Snooping" > "VLAN Configuration", followed screen will appear.

Figure 5-7 IGMP Snooping VLAN

Configuration Configuration object and description is:

Object	Description
Snooping Enabled	Enable the per-VLAN IGMP Snooping. Up to 32 VLANs can be selected for IGMP Snooping.
Querier Election	Enable to join IGMP Querier election in the VLAN. Disable to act as an IGMP Non-Querier.
Querier Address	Define the IPv4 address as source address used in IP header for IGMP Querier election . When the Querier address is not set, system uses IPv4 management address of the IP interface associated with this VLAN. When the IPv4 management address is not set, system uses the first available IPv4 management address. Otherwise, system uses a pre-defined value. By default, this value will be 192.0.2.1.

Click "Save" to store and active settings.

5.6 ERPS

ERPS (Ethernet Ring Protection Switching), it integrates OAM function and APS protocol. If the ring network was interrupted accidentally, the fault recovery times could be less than 50ms to quickly bring the network back to normal operation. ITU-T G.8032 is the first industry standard for ERPS.

Note: Before enable ERPS, STP of ring port should be disabled. .

After Click "Advanced Configure" > "ERPS", followed screen will appear.

Figure 5-8 EPRS

Configuration Configuration object and description is:

Object	Description
Ring ID	ERPS Ring ID
East Port	Number of the port which participate in this Ring protection.
West Port	Number of the other port which participate in this Ring protection.
Ring Type	Available selection: "Major Ring" or "Sub Ring". Only in case of Multi Ring application, "Sub Ring" is required to configure. Default Ring Type: "Major Ring". Only if there is multi ring application, it is required to set.
Interconnected Node	In Multi Ring application, Interconnected Node is the node that connect 2 or more rings.
Major Ring ID	In Single Ring application, Major Ring ID is same as Ring ID. In Multi Ring application, Sub Ring has to be type as Major Ring ID.
R-APS VLAN(1-4094)	Define VLAN for R - APS VLAN.

Click "Add New Ring Group" to create a new ERPS ring application. Click "Save" to store and active settings.

After click the number under "Ring ID", it will go to the page for Ring Configuration as followed screen:

5.7 LLDP

Link Layer Discovery Protocol (LLDP) is used to discover basic information about neighboring devices on the local broadcast domain. LLDP is a Layer 2 protocol that uses periodic broadcasts to advertise information about the sending device. Advertised information is represented in Type Length Value (TLV) format according to the IEEE 802.1ab standard, and can include details such as device identification, capabilities and configuration settings. LLDP also defines how to store and maintain information gathered about the neighboring network nodes it discovers.

After Click "Advanced Configure" > "LLDP", followed screen will appear.

6. QoS Configure

Quality of Service (QoS) is an advanced traffic prioritization feature that allows you to establish control over network traffic. QoS enables you to assign various grades of network service to different types of traffic, such as multi-media, video, protocol-specific, time critical, and file-backup traffic. This function can not only reserve bandwidth, but also limit other traffic that is not so important.

6.1 QoS Port Classification

After Click "QoS Configure" > "Port Classification", followed screen will appear.

Figure 6-1 Port Classification Configuration Screen

Configuration object and description is:

Object	Description
CoS	Controls the default class of service, ranging from 0 (lowest) to 7 (highest). All frames are classified to a CoS. There is a one to one mapping between CoS, queue and priority. A CoS of 0 (zero) has the lowest priority The classified CoS can be overruled by a QCL entry. Note: If the default CoS has been dynamically changed, then the actual default CoS is shown in parentheses after the configured default CoS.
DPL	Controls the default drop precedence level. All frames are classified to a drop precedence level. The classified DPL can be overruled by a QCL entry.
PCP	Controls the default PCP value. All frames are classified to a PCP value. If the port is VLAN aware and the frame is tagged, then the frame is classified to the PCP value in the tag. Otherwise the frame is classified to the default PCP value.
DEI	Controls the default DEI value. All frames are classified to a DEI value. If the port is VLAN aware and the frame is tagged, then the frame is classified to the DEI value in the tag. Otherwise the frame is classified to the default DEI value.
Address Mode	The IP/MAC address mode specifying whether the QCL classification must be based on source (SMAC/SIP) or destination (DMAC/DIP) addresses on this port. The allowed values are: Source: Enable SMAC/SIP matching. Destination: Enable DMAC/DIP matching.

Click "Save" to store and active settings.

7. Security Configure

7.1 Password

To change system login password of the switch, please click "Security Configure" > "Users" > press the User you want to change.

The image shows two screenshots of a network switch's web-based configuration interface. The top screenshot displays the 'Users Configuration' page. On the left is a blue sidebar menu with options: Information & Status, Network Admin, Port Configure, PoE, Advanced Configure, and Security Configure (expanded to show Users, Privilege Levels, SSH, and HTTPS). The main content area has a title 'Users Configuration' and a table with two columns: 'User Name' and 'Privilege Level'. The table contains one entry: 'admin' with a privilege level of '15'. Below the table is a button labeled 'Add New User'. The bottom screenshot shows the 'Edit User' page. The sidebar menu is identical, but the 'Security Configure' section is expanded further to show 'Users', 'Privilege Levels', 'SSH', and 'HTTPS'. The main content area has a title 'Edit User' and a form titled 'User Settings'. The form has four fields: 'User Name' (containing 'admin'), 'Password' (masked with dots), 'Password (again)' (masked with dots), and 'Privilege Level' (a dropdown menu set to '15'). At the bottom of the form are three buttons: 'Save', 'Reset', and 'Cancel'.

7.2 802.1X

In the 802.1X-world, the user is called the supplicant, the switch is the authenticator, and the RADIUS server is the authentication server. The switch acts as the man-in-the-middle, forwarding requests and responses between the supplicant and the authentication server. Frames sent between the supplicant and the switch are special 802.1X frames, known as EAPOL (EAP over LANs) frames. EAPOL frames encapsulate EAP PDUs (RFC3748). Frames sent between the switch and the RADIUS server are RADIUS packets.

RADIUS packets also encapsulate EAP PDUs together with other attributes like the switch's IP address, name, and the supplicant's port number on the switch. EAP is very flexible, in that it allows for different authentication methods, like MD5-Challenge, PEAP, and TLS. The important thing is that the authenticator (the switch) doesn't need to know which authentication method the supplicant and the authentication server are using, or how many information exchange frames are needed for a particular method. The switch simply encapsulates the EAP part of the frame into the relevant type (EAPOL or RADIUS) and forwards it.

When authentication is complete, the RADIUS server sends a special packet containing a success or failure indication. Besides forwarding this decision to the supplicant, the switch uses it to open up or block traffic on the switch port connected to the supplicant.

The IEEE 802.1X standard defines a client-server-based access control and authentication protocol that restricts unauthorized clients from connecting to a LAN through publicly accessible ports. The authentication server authenticates each client connected to a switch port before making available any services offered by the switch or the LAN.

Until the client is authenticated, 802.1X access control allows only Extensible Authentication Protocol over LAN (EAPOL) traffic through the port to which the client is connected. After authentication is successful, normal traffic can pass through the port.

This switch supports 802.1X port-based authentication. In this page, user can configure 802.1X. After click "Security Configure" > "802.1X", followed screen will appear.

7.3 DHCP Snooping

7.3.1 DHCP Overview

DHCP protocol is widely used to dynamically allocate reusable network resources, such as IP address. A typical process of DHCP to obtain IP is as following:

DHCP Client sent DHCP DISCOVER message to DHCP Server, if Client did not receive respond from server within a period of time, it will resend DHCP DISCOVER message.

After received DHCP DISCOVER message, DHCP Server will assign sources (IP address for example) to client, and then send DHCP OFFER message to DHCP Client.

After received DHCP OFFER message, DHCP Client send DHCP REQUEST to ask for server lease, and notify the other servers that it has accepted this server to assign addresses.

After received DHCP REQUEST, server will verify whether resource can be allocated. If OK, it will send DHCP ACK message; If not OK, it will send DHCP NAK message. After received DHCP ACK message, start using the source which server assigned. If received DHCP NAK, DHCP Client will resend DHCP DISCOVER message.

7.3.2 About DHCP Snooping

The addresses assigned to DHCP clients on insecure ports can be carefully controlled using the dynamic bindings registered with DHCP Snooping. DHCP snooping allows a switch to protect a network from rogue DHCP servers or other devices which send port-related information to a DHCP server. This information can be useful in tracking an IP address back to a physical port.

Command Usage

- Network traffic may be disrupted when malicious DHCP messages are received from an outside source. DHCP snooping is used to filter DHCP messages received on a non-secure interface from outside the network or firewall. When DHCP snooping is enabled globally and enabled on a VLAN interface, DHCP messages received on an untrusted interface from a device not listed in the DHCP snooping table will be dropped.
- Table entries are only learned for trusted interfaces. An entry is added or removed dynamically to the DHCP snooping table when a client receives or releases an IP address from a DHCP server. Each entry includes a MAC address, IP address, lease time, VLAN identifier, and port identifier.
- When DHCP snooping is enabled, DHCP messages entering an untrusted interface are filtered based upon dynamic entries learned via DHCP snooping.

- If a DHCP packet from a client passes the filtering criteria, it will only be forwarded to trusted ports in the same VLAN
- If a DHCP packet is from server is received on a trusted port, it will be forwarded to both trusted and untrusted ports in the same VLAN.
- If the DHCP snooping is globally disabled, all dynamic bindings are removed from the binding table.

7.3.3DHCP Snooping Configure

After click "Security Configure" > "DHCP " > "Snooping Setting", following screen will appear.

Figure 7-3 DHCP Snooping Configuration Screen

Configuration object and description is:

Object	Description
DHCP Snooping Mode	Click drop-down menu to enable or disable DHCP Snooping
Port Mode	Indicates the DHCP snooping port mode. Possible port modes are: Trusted: Configures the port as trusted source of the DHCP messages. Untrusted: Configures the port as untrusted source of the DHCP messages.

Click "Save" to store and active settings.

7.4 IP&MAC Source Guard

IP&MAC Source Guard is a secure feature used to restrict IP traffic on DHCP snooping untrusted ports by filtering traffic based on DHCP Snooping Table or manually configured IP Source Bindings. It helps prevent IP spoofing attacks when a host tries to spoof and use the IP address of another host.

7.4.1Port Configuration

In this page, user can make IP&MAC Source Guard Port Configuration. After click "Security Configure">"IP & MAC Source Guard" >"Configuration", followed screen will appear.

VLAN	Type VLAN ID that should be fixed to
IP Address	Type IP Address that should be fixed to
MAC Address	Type Mac Address that should be fixed to

Click "Add New Entry" button to create a new record. Click "Save" to store and active settings.

7.5 ARP Inspection

Dynamic ARP Inspection (DAI) is a secure feature. Several types of attacks can be launched against a host or devices connected to Layer 2 networks by "poisoning" the ARP caches. This feature is used to block such attacks. Only valid ARP requests and responses can go through DUT. A Dynamic ARP prevents the untrust ARP packets based on the DHCP Snooping Database. This page provides ARP Inspection related configuration.

7.5.1Port Configuration

User can make port configuration in this page. After click "Security Configure">"ARP Inspection">"Port Configuration", followed screen will appear.

Figure 7-6 ARP Inspection Port Configuration

Screen Configuration object and description is:

Object	Description
Global Mode	Click drop-down menu to enable or disable Global ARP Inspection
Port Mode	Click drop-down menu to enable or disable port-based ARP Inspection
Check VLAN	If you want to inspect the VLAN configuration, you have to enable the setting of "Check VLAN". The default setting of "Check VLAN" is disabled. When the setting of "Check VLAN" is disabled, the log type of ARP Inspection will refer to the port setting. And the setting of "Check VLAN" is enabled, the log type of ARP Inspection will refer to the VLAN setting. Possible setting of "Check VLAN" are: Enabled: Enable check VLAN operation. Disabled: Disable check VLAN operation.
Log Type	Only the Global Mode and Port Mode on a given port are enabled, and the setting of "Check VLAN" is disabled, the log type of ARP Inspection will refer to the port setting. There are four log types and possible types: None: Log nothing. Deny: Log denied entries. Permit: Log permitted entries. ALL: Log all entries.

Click "Save" to store and active settings.

7.5.2VLAN Configuration

After click "Security Configure">"ARP Inspection" >"VLAN Configuration", followed screen will appear.

Figure 7-8 ARP Inspection VLAN Configuration Screen

Configuration object and description is:

Object	Description
VLAN ID	Indicates the ID of this particular VLAN
Log Type	Click drop-down menu to enable or disable port-based ARP Inspection. Specify ARP Inspection is enabled on which VLANs. First, you have to enable the port setting on Port mode configuration web page. Only when both Global Mode and Port Mode on a given port are enabled, ARP Inspection is enabled on this given port. Second, you can specify which VLAN will be inspected on VLAN mode configuration web page. The log type also can be configured on per VLAN setting. Possible types are: None: Log nothing. Deny: Log denied entries. Permit: Log permitted entries. ALL: Log all entries.

Click "Add New Entry" button to create a new record of VLAN configuration. Click "Save" to store and active settings.

7.5.3Static Table

User can manually configure ARP Inspection Static Table to control port. After click "Security Configure">"ARP Inspection" >"Static Table", followed screen will appear.

Figure 7-9 Static Table Configuration Screen

Configuration object and description is:

Object	Description
Port	Click drop-down menu to select which port should be fixed.
VLAN	Type VLAN ID that should be fixed to
IP Address	Type IP Address that should be fixed to
MAC Address	Type Mac Address that should be fixed to

Click "Add New Entry" button to create a new record. Click "Save" to store and active settings.

7.6ACL

ACL is an acronym for **Access Control List**. It is the list table of ACEs, containing access control entries that specify individual users or groups permitted or denied to specific traffic objects, such as a process or a program. Each accessible traffic object contains an identifier to its ACL. The privileges determine whether there are specific traffic object access rights.

ACL implementations can be quite complex, for example, when the ACEs are prioritized for the various situation. In networking, the ACL refers to a list of service ports or network services that are available on a host or server, each with a list of hosts or servers permitted or denied to use the service. ACL can generally be configured to control inbound traffic, and in this context, they are similar to firewalls.

7.6.1ACL Ports Configure

After click "Security Configure">"ACL" >"Ports", followed screen will appear.

Figure 7-10 ACL Ports Configuration Screen

Configuration object and description is:

Object	Description
Action	There are 2 available options: Permit: that specific port allows data going through. Deny: that specific port forbid data going through.
Rate Limiter ID	Port’s fixed Rate Limiter ID, please go to Rate Limiter Configuration for more details.
Port Redirect	Select which port frames are redirected on. The allowed values are Disabled or a specific port number and it can't be set when action is permitted. The default value is "Disabled".
Mirror	Specify the mirror operation of this port. The allowed values are: Enabled: Frames received on the port are mirrored. Disabled: Frames received on the port are not mirrored. The default value is "Disabled".
Logging	Enabled or Disabled Log
Shut Down	Specify the port shut down operation of this port. The allowed values are: Enabled: If a frame is received on the port, the port will be disabled. Disabled: Port shut down is disabled. The default value is "Disabled". Note: The shutdown feature only works when the packet length is less than 1518 (without VLAN tags).
State	Specify the port state of this port. The allowed values are: Enabled: To reopen ports by changing the volatile port configuration of the ACL user module. Disabled: To close ports by changing the volatile port configuration of the ACL user module. The default value is "Enabled".
Counter	Counts the number of frames that match this rule.

Click "Save" to store and active settings.

7.6.2Rate Limiter Configuration

User can make ACL Rate limiter configuration in this page. After click "Security Configure">"ACL">"Rate Limiter", followed screen will appear.

8. Diagnostics

8.1 Ping Test

Ping is a little program that can issue ICMP Echo packets to the IP address you defined. Destination node will respond to those packets sent from switch. So Ping test is to troubleshoot IP connectivity issues.

After click "Diagnostics ">"Ping", followed screen appear.

The screenshot displays the 'ICMP Ping' configuration window. On the left, a blue sidebar contains a navigation menu with categories like 'Information & Status', 'Network Admin', 'Port Configure', 'PoE', 'Advanced Configure', 'Security Configure', 'ACL', 'DHCP', 'IP&MAC Source Guard', 'ARP Inspection', 'AAA', 'QoS Configure', and 'Diagnostics'. Under 'Diagnostics', 'Ping' is selected. The main panel on the right is titled 'ICMP Ping' and features four input fields: 'IP Address' (0.0.0.0), 'Ping Length' (56), 'Ping Count' (5), and 'Ping Interval' (1). A 'Start' button is positioned below these fields.

Figure 8-1 Ping Test Screen

Configuration object and description is:

Object	Description
IP Address	The destination IP Address that needed to Ping
Ping Length	Input a number between 1 and 1452. Default: 56
Ping Count	The times for inputting Ping IPv4 address or IPv6 address (Number of echo requests to send). User can input a number between 1 and 60.
Ping Interval	Interval time for Ping (Send interval for each ICMP packet)

Click "Start" button to start Ping testing.

8.2 Cable Diagnostics

The Cable Diagnostics performs tests on 10/100/1000BASE-T copper cables. These functions have the ability to identify the cable length and operating conditions, and to isolate a variety of common faults that can occur on the Cat5 twisted-pair cabling.

After click "Diagnostics ">"Cable Diagnostics", followed screen will appear.

Figure 8-2 Cable Diagnostics Screen

Click "Start" button to start "Cable Diagnostics" testing.

8.3 CPU Load

This page shows percent of CPU load. After click "Diagnostics">"CPU Load", followed screen will appear.

Safety Warnings

For your safety, be sure to read and follow all warning notices and instructions.

- Do not open the device. Opening or removing the device cover can expose you to dangerous high voltage points or other risks. Only qualified service personnel can service the device. Please contact your vendor for further information.
- Do not use your device during a thunderstorm. There may be a risk of electric shock brought about by lightning.
- Do not expose your device to dust or corrosive liquids.
- Do not use this product near water sources.
- Make sure to connect the cables to the correct ports.
- Do not obstruct the ventilation slots on the device.

Written Offer for Source Code

For binaries that you receive from ALLNET GmbH Computersysteme on physical media or within the download of the offered firmware that are licensed under any version of the GNU General Public License (GPL) or the GNU LGPL, you can receive a complete machine-readable copy of the source code by sending a written request to:

ALLNET GmbH Computersysteme
Maistrasse 2
82110 Germering

Your request should include: (i) the name of the covered binary, (ii) the version number of the ALLNET product containing the covered binary, (iii) your name, (iv) your company name (if applicable) and (v) your return mailing and email address (if available). We may charge you a nominal fee to cover the cost of the media and distribution. Your request must be sent within three (3) years of the date you received the GPL or LGPL covered code. For your convenience, some or all of the source code may also be found at:

<http://www.allnet.de/gpl.html>

LICENSE.GPLv2 GNU GENERAL PUBLIC LICENSE Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too. When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it,

that you can change the software or use pieces of it in new free programs; and that you know you can do these things. To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it. For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights. We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".
Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.
1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
 - a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
 - b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
 - c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:
 - a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.
7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.> Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Also add information on how to contact you by electronic and paper mail. If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author

Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.

This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program

`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989

Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

LICENSE.LGPLv2.1

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc. 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed. [This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
 - a) The modified work must itself be a software library.
 - b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
 - c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
 - d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
- b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.
- c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.
- d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy. For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable. It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:
 - a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.
 - b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.
8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.
10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.
11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.> Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library `Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990 Ty Coon, President of Vice

That's all there is to it!
