

The [AIIKEY](#) is a USB device that can add partitions from the local hard disk drive and hide it, and provide encrypted backup function and website-lock/ PC-lock function. Using free space of the hard drive, [AIIKEY](#) can make many partitions where you will like to save your private data. The [AIIKEY](#) offers the ability to hide physically file directories from unauthorized users without the hassle and complications of a weak software encrypted password. It will not show the partition that you added until [AIIKEY](#) is plug in USB. [AIIKEY](#) is ideal for data storage and security. Finally, you could leave your computer with the assurance that no one without your key can prowl through your classified information.

[AIIKEY](#) also can support multiple users. Each different key can add individual partitions that are mutually exclusive from each other. So only The [AIIKEY](#) that was used to create the hidden partition can access it. If many people using the same computer and with " [AIIKEY](#) " all of them can make their own partition and store their files safely.

Who is The [AIIKEY](#) for?

Mid and Small enterprise owner

Company projects and data are meant to be secret. Yet, if a perpetrator has physical access to the computer, how can you ensure that that they truly remain secret? Within the busy corporate environment, people come and go, and it is impossible to restrict people from using your computers. The [AIIKEY](#) offers protection in a simple manner, and classified company material remains classified.

Professional's Notebook

Although notebook computers are valuable tool for business travelers, accidents occur and the equipment may be lost or stolen. Although the lost of equipment is unfortunate, the loss of propriety data to the open market is far worse. Years of research may be exposed, creating millions of dollars of lost revenues. With The [AIIKEY](#), even if the computer is stolen, the finder will not have access to the confidential files stored in the hidden [AIIKEY](#) directories.

Personal Privacy

When you leave your computer, how do you know that those around you do not read your e-mail? These instances can be avoided by creating a level of protection within your computer. Setting a password is an option, but it becomes it quickly becomes a nuisance. With The [AIIKEY](#) simply have these personal programs stored in The [AIIKEY](#) directory, and only you would have access to them.
